P.O. BOX 53

MACKAY, IDAHO 83251

RECEIVED

JUN 30 1995

Department of Water Resources

March 29, 1995

Mr. R. Keith Higginson, Director
Idaho Department of Water Resources
Statehouse-Annex 2
Boise, Idaho 83707

Dear Sir:

The following pages contain the annual report on distribution of the water of Big Lost River, from November 1st, 1993 to October 31st, 1994.

The authority to distribute water using the water rights in the Basin 34 Director's report was provided by the Memorandum Decision and Order Granting Idaho Department of Water Resources' Motion for Interim Administration with Limitations, February 28, 1994, by District Court Judge Daniel C. Hurlbutt.

Very truly yours,

Doug Rosenkrance

Watermaster
Dist. #34
Big Lost River

WATER DISTRICT #34
P.O. Box 53
MACKAY, IDAHO 83251

SUMMARY OF ANNUAL REPORT 1994

The water for the year 1994 was one of the lowest water years we have had. There was only 7.01 inches of precipitation for the entire year.

A heavy rain storm in the Wild Horse area brought the flow at the Howell Gaging Station up to 1029 second feet on May 13th. This was the highest it reached for the entire summer. The reading had dropped to 300 second feet by May 22nd.

The flow reached 750 second feet again on May 27th and dropped to 300 second feet by June 16th.

The Mackay Reservoir reached 38,725 acre feet.

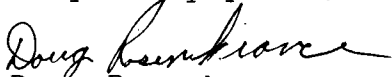

The storage water was drawn out by August 26th. This left the Moore and Arco section without water the rest of the year.

I tried to deliver the 1883 water rights at the Moore Diversion but was unable to do so. The "Futile Call" was made on Sept. 3rd. The water was then moved upstream and the 1886 rights were called for the reaches above the Moore Diversion.

Antelope Creek, Pass Creek, Alter Creek and above the Mackay Reservoir were very low, with very little water in August and September.

The wells were used and most of the users got by. Because of the use of wells for irrigation purposes, the valley survived pretty well considering the lack of water.

Very truly yours,

Doug Rosenkrance
Watermaster
Dist. #34
Big Lost River

ALL THAT CAN BE DELIVERED

SUMMARY

Water rights used in IDWR Water Distribution Accounting Program for Water District #34. Accounting program's use in 1994 limited to Mackay Reservoir and Big Lost River main stream reaches below the Mackay Reservoir.

CLARIFICATION OF FLOW DATA FOR GAGING STATIONS:

Reported flows in the attached tables for gaging stations below the Moore Diversion and below the Arco Canal (or below the Munsey Diversion) were estimated by water district staff. These reported flows are the flows that were entered and used in the IDWR Big Lost River Flow Accounting Program. Flows were estimated by measuring head of water over concrete diversion dams and application of a weir discharge formula respectively at the Moore-Eastside and Arco-Munsey diversion dams.

As per the watermaster, the attached table showing 'Preliminary Data' for the Big Lost River near Arco are flows estimated by water district staff for the Big Lost River at the McLaughlin Diversion. The table entitled 'USGS - Big Lost River near Arco' is the final data prepared by the USGS for it's gaging station located four miles southeast of Arco in SW $\frac{1}{4}$, Sec. 17, T. 3N, R.27E.

Flows reported for the gaging station at Leslie are based on actual 1994 current meter measurements on the Big Lost bridge near Leslie and development of a stage-discharge rating table by IDWR and the watermaster. Tables reporting flows for the Big Lost River below Mackay Reservoir (or the 2B gage) include preliminary data, or data as read and recorded daily by watermaster, and final data as reported by the USGS.

UNDERGROUND WELLS USED FOR IRRIGATION PURPOSES:

1994 was the second year that data was kept on the underground wells in the Big Lost River, Water Dist. #34.

A total of 41,233 CFS was pumped from these wells in 1994. This figure is estimated.

1994
GROUND WATER WELLS
PUMPING REPORT

The attached Pumping Report lists either measured or estimated volumes of water withdrawals from ground water wells in Water District 34. Each well in the district which is subject to watermaster control is identified by a well number. Well number locations and associated water rights can be found on maps at the Water District 34 office.

In 1994, the water district employed a ground water hydrographer to measure well discharge. Instantaneous discharge measurements were obtained for about one-third of the wells under watermaster control in the district. These flow rates are reported in the 'Measured Flow' column. Energy records were provided by water users for a portion of these wells to determine a volume of use based on relationship between measured flow rate and energy consumption records. Volumes based on measured flows and power records are reported under the 'Measured Volume' column.

Volumes were estimated by the watermaster for wells where measured flow rates and/or power records were not obtained. In these cases, 1994 measured flow rates or the water right rates of diversion were multiplied by number of pumping days to obtain an estimated annual volume. These volumes are reported under the 'Estimated Volume' column. Pumping days were either estimated by the watermaster or provided to the watermaster by the well owner or operator.
