Big Lost River Irrigation District
P.O. Box 205
Mackay, Idaho 83213

Board Members of BLRID:

Since the BLRID's Board is ultimately responsible for the fair, equitable, and accurate administration of water, they must be provided with complete and accurate records of distribution. If the Board chooses to allow the Manager to assume part of the duties of the Watermaster of Basin #34, they should insist on complete and accurate records for the entire year. According to IDAPA 37.03.12, Water Distribution Rules - Water District 34, Rule 060 states, "Water diversions shall be accounted for continuously, throughout the year by the watermaster".

We have asked both BLRID and IDWR Watermaster Basin 34 for this accounting covering the "off" season deliveries of stock water. All we have received are the Ditchrider Logs for the non-irrigation season for diversions into the canals. When these are compared to the decrees for off-season "stockwater", there is a considerable discrepancy. ~~If the individual's decree delivered to place of use exceeds it's decree limit, usually 13,000 gallons, it must be counted against the total consumptive use for that decree.~~ Therefore, an individual accounting should be recorded. The current Policy Manual states, "Effective 12/7/1982 it shall be the policy of BLRID to enforce the closing of all canals on November 1st of each year. No stock water shall be delivered after that date due to the icing of the canals." The Ditch Rider Logs show diversions into the canals above the Blaine Diversion last year until 11/18/2004. See attachment. (These diversions also do not correspond to the decrees.) The entire lower valley is therefore denied any benefits of recharge. If this is not an accurate understanding, please address this matter.

A daily accounting of Storage Water disbursements should be kept. A phone call and a letter should be sent to any Storage holder of his account's status before it enters a negative balance. When Storage holders are allowed to overdraw their accounts, someone else is being denied their water. In 2004, the week ending July 18th, which was only 17 days before the "futile call" was made, the records show there were individual overdrafts of thousands of inches of water with either no time or way of repayment. That water had to be appropriated water from someone else's decree, storage water, a ground water right, or the result of inaccurate records. A daily accounting, and a timely notification to an individual user would allow that individual to

correct the situation or cease usage. Every time there is a shortage of water in the system, the ground water users rights are curtailed. Since the pumps are still pumping, the pumpers still paying for power, and accumulating additional obligations for mitigation water, they should be receiving their water. Instead, I believe, they are supplementing the overdrafts allowed by the district.

A complete, accurate, and up-to-date policy manual should be assembled and distributed to each board member and to all new board members at the time of seating. If a question is posed, there should be a consistent answer. Now, if you ask a question, you get ten different answers. Generally, the answer includes, "We've always done it this way....." When an answer is investigated, it involves going to the Plan of Operation, then searching all the Minutes of the Board meetings, and hoping you haven't missed an important entry.

Board members should receive copies of all correspondence, especially those relating to policies or procedures, both to and from the Manager. The Manager should only implement BLRID's policies and procedures; not establish new policies without the Board's knowledge or written authorization. This written authorization could be as simple as an entry into the approved minutes of the meeting. This approval should then be added to the policy manual with reference to date of implementation and all patrons should be advised of the changes in writing. The Board should receive advance notice of issues to be discussed at Board meetings. This would allow them time to investigate the matters and make informed decisions.

Attached are other issues and related documents that I believe should be addressed, but are too extensive to include in the body of this letter. Thank you in advance for reviewing my concerns.

Sincerely,

Nancy McDonald

Joel Anderson

Kent Harwood

Bruce Warner

Bob Schaffer, Manager BLRID

Bob Duke, Watermaster Basin #34

Steve Burrell, IDWR

THIS DOCUMENT is intended to address some concerns and to demonstrate the errors and the inadequacies in the distribution and accounting practices of both IDWR (Idaho Dept. of Water, Basin #34) AND BLRID (Big Lost River Irrigation District). These records were all obtained from the above offices.

ISSUE 1

From May 1, 2004, through May 18, 2004, 68% of the 04/22/1884 water rights were on:
(Attached is copy of Water Right Sheet from IDWR #34)

Arco Diversion: 1.36 cfs 06/01/1880 ; None diverted until May 14, 2004.

Moore Diversion: 13.824 cfs 06/01/1883 through 08/10/1883. None diverted until May 13, 2004.

Eastside Diversion: 0.855 cfs of 08/10/1883. None diverted until May 15, 2004

Sharp diversion: 7.92 cfs April 22, 1884. On May 3, 2004, 5.4 cfs diverted.

Burnett & Beck: 1 cfs of April 1, 1884 decreed out the Burnett, and 9.24 cfs April 22, 1884 decreed out of the Burnett and the Beck. (There are several rights out of the Burnett that have multiple points of diversions). $68 \times 9.24 = 6.28$ cfs. Diversion rate on May 3, 2004 was 0 cfs for the Burnett and 7.8 cfs for the Beck. (.52cfs overage)

Swauger Diversion: 3.51 cfs of April 22, 1884 decree. $68\% \times 3.51 = 2.38$ cfs. There was 11.58 cfs diverted on May 3, 2004. That was 8.35 overage. . That is 3.5 times the decreed amount. On May 4th 13.76 cfs was diverted, and on May 5th, 14.04 cfs was diverted.

Darlington Diversion: 8.268 cfs of April 22, 1884 decree. $68\% \times 8.268 = 5.62$ cfs. On May 3, 2004, 17 cfs was diverted.. That is 3 times the decreed amount. On May 4th, 24 cfs, on May 5th, 28cfs, on May 6th, 32cfs, and on May 7th, 32 cfs diverted.

Storage Water was allocated at the May 4, 2004, evening meeting, of Big Lost River Irrigation District. Therefore, the overages in the canals on May 3rd could not have been storage water. There doesn't appear to be any exchange wells. What are the overages? Isn't this practice making a "futile call" for the lower valley at the beginning of the season?

ISSUE 2

An ORDER signed and dated August 11, 2003 by Mr. Karl J. Dreher, Director of IDWR, issued an Order for "futile call". There were very specific criteria for the basis of this Order. Item "e" states "On August 7, 2003, the Department instructed the Watermaster to curtail all diversions of water right later in time than August 10, 1883, in the Mackay and Leslie reaches of the Big Lost River, including the Beck diversion (located just below the Leslie gage). The Department further instructed the Watermaster to attempt to deliver the senior 1883 priority

rights at the Moore Diversion. The Department further ordered the Watermaster to report on August 11, 2003, the amount of water reaching the Moore Diversion." See attached copy of the entire Order.

Shouldn't the same criteria have been required before the "futile call" was made on July 31, 2004? **Please note the following items:**

1. Reservoir Updates the week prior to the futile calls

Update August 5, 2003		Update July 26, 2004
2003 Howell gauge, 125 cfs	-vs-	2004 Howell Gauge, 258 cfs.
2003 Contents, 336 A.F.	-vs-	2004 Contents, 2307 A.F.
2003 Release, 176 cfs	-vs-	2004 Release, 250 cfs.
2003 Inflow, 162 cfs	-vs-	2004 Inflow, 171 cfs.
2003 Capacity, .7%	-vs-	2004 Capacity, 5%.

2. Ditch Rider Logs dated July 26, 2004 through August 1, 2004.

A. The decree sheet previously attached for Issue I shows a Decree Date of 05/31/1884 from July 18th through July 31st.

B. The diversions were never curtailed above the Blaine Diversion.

Sharp decreased from 296 cfs to 200 on July 29th and 30th

Swauger decreased from 555 cfs to 517 on July 27th

Darlington was at 1300 on July 26th, 950 cfs on July 27th, increased to 1200 cfs on July 28th and 29th

Burnett went from 1800 cfs to none on July 29th and July 30 then back to 1800 cfs on July 31, 2004

Beck was at 615 cfs through the period

Several requests have been made to Bob Schaffer for records showing Storage and Impounded Water deliveries, but to date none have been received.
