DEPARTMENT OF
WATER RESOURCES

November 21, 2006

Mr. Karl Dreher
322 Front Street
P.O. Box 83720
Boise, Idaho 83720

Dear Mr. Dreher:

The following pages contain the annual report of the distribution of water for the Big Lost River, From November 1, 2005 to October 31, 2006

The Authority to distribute water using water rights in the Basin 34 Directors Report was provided by the Memorandum decision and order granting the Department of Water Resources' motion for interim Administration with Limitation, or decrees issued by the SRBA court.

Very truly yours,

Robert Duke
Watermaster
District #34-Big Lost River

WATER DISTRICT #34
P.O. BOX 53
MACKAY, IDAHO 83251

SUMMARY OF ANNUAL REPORT FOR 2006

Water District #34 experienced another good water year. Recharge started at the beginning of the irrigation season and continued until the first week in July. Spring runoff and spring rains held back the need for irrigation for approximately 3-weeks.

Request for mitigation was not called for in the 2006 irrigation season.

All water rights were called from the beginning of the irrigation season until July 12th when a decree call of 1944 rights was made. The river broke or disconnected above the reservoir on July 17, 2006. The next decree call was on July 20th and dropped to the 9-26-1896 below the reservoir. The next decree call was on July 25th, which dropped the decree call to the all the 1889 water rights. The next decree call was on August 15th, which dropped the decree call to the 9-14-1886 water rights. Early in August it was found that the gates on the Mackay Reservoir could not be closed. Draining of the reservoir had to occur in order to fix the bent "stems" that attach to the control gates. Water rights were raised to all the 1888 decree to allow water users to utilize the additional water available. Water rights above the reservoir were called to the 1944 on the 12th of July. The river broke above on the 17th of July, which put all water rights on above the reservoir. A decree call of 1905 water rights above the reservoir was made on July 31st. On August 3rd another decree call of 1902 was made above the reservoir and remained until the end of the irrigation season.

Recharge efforts was a success as ground water levels raised considerable and the Big Lost River as of late November is still delivering stock water rights to the Arco area. This to me indicates recovery from the past drought conditions are in process.

A new gauging station below Leslie was installed and operating in May and was being posted in June on the Idaho Power web site. The Blaine Diversion Bridge that crosses Highway 93 locates the gauging station. Throughout the irrigation season the flows were monitored and rating curves were being established. The information gathered this season would fine-tune the flows being reported for the upcoming irrigation season in 2007.

The Mackay Reservoir gates were back in operation by October 19th and water was being diverted for storage. With the amount of water in the underground system above the reservoir there is a very good potential the reservoir will fill this winter. It has filled from 3.4 per cent on October 15 to 27 percent on November 20th 2006. A good inflow into the reservoir still remains.

The Howell gauge peaked on May 21st at 4310 cfs

IDWR involvement during the 2006 irrigation gives a positive indication that Water District #34 is improving its general operations.

Robert Duke

Clarification of Flow Data
For
Gauging Stations

Reported flows in the attached tables for gauging stations below the Moore Diversion and Arco Canal (or below the Munsey Diversion), were estimated by water district staff. These reported flows are the flows that were entered and used in the IDWR Big Lost River Flow Accounting Program. Flows were estimated by measuring the head of water over concrete diversion dams and application of a weir discharge formula respectively at the Moore-Eastside and Arco-Munsey diversion dams.

The USGS tables titled station number 13120500 Big Lost River At Howell Ranch and station number 13132500 Big Lost River Nr Arco are the final data prepared by the USGS for it's gauging stations located north of the Mackay Reservoir and four miles southeast of Arco, respectively.

Flow reported for the gauging station at Leslie are based on actual 1998 current meter measurements on the Big Lost bridge near Leslie and the development of a stage-discharge rating table by IDWR and the Watermaster. Tables reporting flows for the Big Lost River below the Mackay Reservoir (or the 2B gage) include data as read and recorded daily by the Watermaster and as reported by the USGS.

WATER DISTRICT 34
ANNUAL VOLUME ESTIMATES FOR GROUND WATER WELLS

Annual volume estimates are based on power use data provided by Lost River Electric Cooperative (LRE) and PCC measurement data provided by Water District 34.

PCC acre-foot qualifier codes:

Z = zero power consumption

N = no PCC measurement or estimate available

9 = PCC was estimated, not measured. Where PCC measurements were not provided by Water District 34, PCCs were estimated, usually by estimating the power demand from the motor horsepower reported by LRE and estimating the flow rate using water right flow rate limits. Where Water District 34 provided a measured flow rate, it was used with an estimated power demand to estimate the PCC. For POD number 68, the PCC measured by the Water District at POD number 71 was used for the estimate.

Under Idaho Code and Public Utility Commission Rules, IDWR and Water District staff are prohibited from releasing power data to the public. Power data contained in this spreadsheet is for internal use only. Please forward any requests for data to the IDWR Water Distribution Section.
