R. W. FARIS, COMMISSIONER
BOISE

BUREAU OF WATER RESOURCES
LESTER C. WALKER [redacted]
DIRECTOR

C. BEN ROSS, GOVERNOR

January 15, 1936

Hon. C. BEN ROSS,
Governor of Idaho
Boise, Idaho

Dear Sir:

I am transmitting herewith the annual report of Lynn Crandall, Watermaster and Special Deputy Commissioner of Reclamation for Water District No. 36, for the year 1935, covering his operations in the distribution and handling of water in cooperation with the U. S. Geological Survey, the water users of the District and this Department.

Water District No. 36 comprises about a million acres of land, being practically all the irrigated area of the Snake River Valley above the Milner dam, including the two Twin Falls projects and the so-called Milner-Gooding project. The water supply available for this area during the past year was somewhat above that for 1934, and almost an average of that for the past seven years, but only about 55 per cent of the average for the 40-year period of which we have a record.

Mr. Crandall exercised his usual energy and good judgment in the handling and distribution of the available water supply, but due to the deficient runoff some crop losses were sustained. At the present time precipitation in the Upper Snake River area is about up to normal and it is hoped that we are approaching the beginning of the end of the dry cycle covering the past seven years.

With the construction of the Island Park reservoir now under way and the probability of the construction of a reservoir in Teton Basin and some prospect of securing additional water from other sources, the outlook for a return to something like normal water supply in the Upper Snake River Valley is encouraging.

Very truly yours,

R. W. Faris

Commissioner of Reclamation

STATE OF IDAHO

LYNN CRANDALL, WATERMASTER
IDAHO FALLS, IDAHO

WATER DISTRICT NO. 38

C. BEN ROSS, GOVERNOR
R. W. FARIS, COMMISSIONER

January 10, 1936

Mr. R. W. Faris
Commissioner of Reclamation
Boise, Idaho.

Dear Sir:

There is transmitted herewith the 1935 annual report covering the administration of Water District No. 36.

As you know, the work of water distribution and collection of stream-flow records in this district has been carried on since 1919 under a cooperative agreement between the U. S. Geological Survey, the Snake River waterusers, and the State of Idaho.

The past year was the 7th successive year of below normal run-off on Snake River and while the area as a whole was able to mature practically all crops there were some losses suffered under a few ditches with late rights on the main river and by quite a number of canals on Henrys Fork, Fall River and Teton River. The situation under these latter ditches should be materially improved beginning in 1937 when water will be available from the new Island Park reservoir now under construction.

Cooperation by yourself, various state officials, the Committee of Nine, and managers of different canal companies contributed materially to the efficient and equitable distribution of water in the district.

The capable service rendered by the various employees of the district during the irrigation season and the assistance of W. V. Iorns and Effie C. Jones in the preparation of this report are especially appreciated.

Very truly yours,

LYNN CRANDALL

Watermaster.

WATER DISTRIBUTION AND HYDROMETRIC WORK

WATER DISTRICT NO. 36

1935

By Lynn Crandall

Watermaster

INTRODUCTION

The annual watermaster election of District No. 36 was held in Idaho Falls on March 4, 1935 at which time Lynn Crandall was re-elected as watermaster for the ensuing year and the following were re-elected as members of the advisory committee of nine:

W. O. Cotton, E. B. Darlington (S. T. Lowe, substitute), John W. Hart, John E. Kelley, F. A. Miller, E. H. Neal, Eph Ricks, N. V. Sharp, and R. E. Shepherd.

The committee members selected John W. Hart as chairman, F. A. Miller, vice-chairman, and John Lee, Secretary.

The annual meeting unanimously adopted the report of the resolutions committee which included a recommendation that the following transmission losses be charged on stored water: 2.5% Moran to Heise, 4.4% Heise to Lorenzo, 0.5% Lorenzo to Woodville, 6% Woodville to Blackfoot, 1.5% Henrys Lake to Warm River, 0.5% Warm River to Ashton. These figures are the same that have been used for a number of years past.

At the time of the annual watermaster election the accumulated snowfall was below normal but heavy precipitation over the watershed during March, April, and May brought the accumulated precipitation at the beginning of the irrigation season up to normal for that time of year. Subsequent precipitation from June to September, however, was far below normal, being less than half of what it was during that period in the preceding dry year of 1934. This shortage of summer precipitation together with water absorbed in partially restoring ground-water levels depleted by the 1934 drought was responsible for the 1935 run-off being substantially below normal.

Request for natural flow regulation was filed on March 4, the date of the watermaster election, and the watermaster was appointed on March 18 as special deputy Commissioner of Reclamation to supervise the delivery of stored water from the various reservoirs in District No. 36. Owing to favorable precipitation during the early spring months it proved possible to continue storing intermittently for reservoir credit at American Falls until June 18 and at Jackson Lake until June 25.

American Falls owned rights (except American Falls No. 1 Reservoir District) were 60.2% filled plus holdovers and the leased and American Falls No. 1 Reservoir District rights were 55.6% filled plus special saved winter water credits of 42,500 acre-feet to the North Side Canal Company. Jackson Lake bottom rights were filled in full and the top rights were 44% filled. Henrys Lake rights were 23.3% filled.

Owing to lack of summer rains the natural flow of the river steadily receded as the season advanced, resulting in cuts reaching back to August 13, 1888 priority. To partially take care of the most serious shortages thus resulting the various owners of storage and natural flow rights were solicited to rent a portion of their supply at 50 cents per acre-foot and it proved possible to secure a pool of 28,000 acre-feet in this manner which was rented to those in greatest need of the water. There was demand for more water than this but it could not be secured as the principal owners of storage in excess of their current needs apparently preferred to retain some as holdover for the following year rather than to rent to others for use during 1935, and the season closed with 158,000 acre-feet holdover at American Falls and Jackson Lake.

Regulation on the main river continued until October 15 and on Henrys Fork until October 24 after which dates rains and freezing weather reduced the demand for water in the upper valley so that it was possible to cease regulation. Jackson Lake gates were closed on October 15.

The annual river run-off at Moran for the year ending September 30, 1935 was 89% of normal; at Heise 80% of normal; and at Neeley 55% of normal.

A contract was let by the U. S. Bureau of Reclamation late in the year for the construction of the Island Park Reservoir and it is anticipated that storage can begin in this reservoir by the fall of 1936.

PERSONNEL

The personnel engaged in the work of distribution during the year was as follows:

Lynn Crandall,	Watermaster & Special Deputy Commissioner of Reclamation.
W. V. Iorns,	Assistant Engineer.
Melvin Luke	Hydrographer & Deputy Watermaster on Henrys Fork & tributaries.
Geo. H. Powell,	Hydrographer during irrigation season.
F. W. Tolles,	Hydrographer during irrigation season.
Ann B. Kammers & Effie C. Jones,	Clerk.
R. L. Sutcliffe,	Deputy Watermaster, Teton Basin.
Walter C. Lenz,	Deputy Watermaster, Upper Fall River.
Clarence Madson,	Deputy Watermaster, Henrys Fork & Teton River.
D. R. Crystal,	Deputy Watermaster, Heise Division.
H. M. Bramwell,	Deputy Watermaster, Rigby Division.
S. W. Emmerton	Deputy Watermaster, Idaho Falls Division.
Eugene Liljenquist,	Deputy Watermaster, Blackfoot Division.
Dana Templin,	Deputy Watermaster, Minidoka Dam.
W. N. McConnel,	Deputy Watermaster, Milner Dam.
Chas. Burton,	Deputy Watermaster, Swan Valley Dist.
H. E. Field & A. W. Heath,	Supt., American Falls Dam.
B. B. Hill,	Supt., Jackson Lake Dam.
K. McGinn,	Supt., Henrys Lake Dam.

Mrs. John Koppner, C. C. Davidson, Mrs. Irvin Sieport, O. A. Cammack, J. F. Johnson, D. R. Anthony, James Fugal, J. A. Clough, T. E. Culley, A. J. Ayers, and G. S. Gilham, gage readers.

SNOW SURVEYS

The results of snow surveys on the Jackson Lake watershed during past years are shown in the following tabulation:

Table showing average snow depth and water equivalent on Jackson Lake watershed, in inches.
(Snow surveys made 14th - 21st of each mo.)

Year	January		February		March		April	
	Snow	Water	Snow	Water	Snow	Water	Snow	Water
1919	36	8.1	45	12.0	52	16.8	49	18.4
1920	40	9.6	54	13.8	74	21.5	70	23.0
1921			63	17.9	65	20.6	56	21.3
1922	54	14.2	72	18.2	73	22.0	64	23.4
1923	43	11.3	51	15.6	64	20.7	54	23.0
1924	44	10.8	47	13.5	51	15.8	48	17.7
1925	50	12.8	66	24.0	75	25.9	50	21.9
1926	32	9.0	52	14.0	49	16.6	40	15.6
1927	66	18.5	75	27.0	82	33.0	85	36.0
1928	58	18.0	59	20.4	69	23.8	80	31.5
1929	37	8.8	60	16.5	61	20.2	62	22.0
1930	36	8.3	49	13.5	53	16.8	27	11.7
1931	25	5.2	30	6.2	35	8.4	27	8.9
1932	47	12.1	64	20.0	69	24.0	61	25.0
1933	46	10.8	67	18.8	67	21.6	62	24.0
1934	36	8.5	35	12.9	40	15.3	33	15.7
1935	51	12.2	46	14.3	52	17.9	60	23.8
Average, inches	44	11.1	55	16.4	61	20.1	55	21.4
Average, % water		25		30		33		39

The above table is the average of results at Moran, Moran Canyon, Arizona Station, Huckleberry Divide, Snake River Station, Coulter Creek, Lewis Lake Divide, Aster Creek, and Glade Creek.

These snow surveys are of great interest and value to the Snake River waterusers each spring in forecasting run-off. They must be used, however, with a knowledge of other factors that affect the

available water supply for the Snake River Valley during the irrigation season. Among these are the precipitation during the spring and summer months, the relative relation of ground-water levels to normal at the close of the preceding year, and the fact that 80% of the run-off of the South Fork of Snake River originates below Moran. Thus the April, 1935 snow survey showed a water supply on the Jackson Lake watershed of 10% above normal. Due to other unfavorable factors, however, the 1935 annual run-off at Moran as previously stated was only 89% of normal and at Heise 80% of normal.

REGULATION SCHEDULE

The following schedule applies particularly to rights above Blackfoot, as the inflow below that point is always sufficient to at least partially fill rights of October 11, 1900 priority irrespective of rights that can be filled in the upper valley. Natural flow water delivered daily to canals in the lower valley below American Falls is shown in detail on plates 11-13 incl.

1935 Regulation Schedule

June 20 Cut off 1913 rights.

July 5 Cut off rights later than Mar. 22, 1903.
" 10 Cut off rights later than 1900 priority.
" 11 Cut off 1897 rights.
" 12 Cut off 1896 rights.
" 13 Cut off rights later than Feb. 6, 1895.
" 14 Filled 65% of Feb. 6, 1895 right.
" 15 Filled 50% of Feb. 6, 1895 right.
" 16 Filled 20% of Feb. 6, 1895 right.
" 17 Cut off all 1895 rights.
" 18 Filled 50% of Aug. 18, 1894 right.
" 20 Cut off June 1, 1892 rights.
" 21 Filled 50% of Apr. 28, 1892 right.
" 22 Filled two-thirds of Dec. 14, 1891 right.
" 23 Filled one-third of Dec. 14, 1891 right.
" 24 Cut off Dec. 14, 1891 right.

July 25 Filled 75% of Jan. 24, 1891 right.
" 26 Filled 50% of Jan. 24, 1891 right.
" 27 Cut off all 1891 rights.
" 28 Filled one-third of Oct. 16, 1890 rights.
" 29 Filled 50% of July 12, 1890 rights.
" 30 Cut off July 12, 1890 rights.
" 31 Cut off rights later than June 1, 1890.

Aug. 4 Cut off June 1, 1890 rights.
" 5 Cut off all 1890 rights.
" 6 Filled 50% of July 10, 1889 rights.
" 7 Cut off rights later than June 1, 1889.
" 8 Filled 80% of June 1, 1889 rights.
" 10 Filled 20% of June 1, 1889 rights.
" 11 Filled 90% of May 11, 1889 rights.
" 12 Filled 70% of May 11, 1889 rights.
" 13 Filled 60% of May 11, 1889 rights.
" 14 Filled 50% of May 11, 1889 rights.
" 15 Filled 45% of May 11, 1889 rights.
" 16 Filled 35% of May 11, 1889 rights.
" 17 Filled 25% of May 11, 1889 rights.
" 19 Filled 30% of May 11, 1889 rights.
" 22 Filled 50% of May 11, 1889 rights.
" 23 Filled 30% of May 11, 1889 rights.
" 24 Filled 50% of May 11, 1889 rights.
" 29 Filled 25% of May 11, 1889 rights.

Sept. 5 Filled 10% of May 11, 1889 rights.
" 7 Cut off May 11, 1889 rights.
" 8 Filled two-thirds of April 15, 1889 rights.
" 9 Filled 50% of April 15, 1889 rights.
" 11 Filled 20% of April 15, 1889 rights.
" 12 Cut off April 15, 1889 rights.
" 13 Filled 75% of April 6, 1889 rights.
" 15 Filled 50% of April 6, 1889 rights.
" 16 Cut off April 6, 1889 rights.
" 17 Cut off all 1889 rights.
" 20 Filled 50% of Aug. 13, 1888 rights.
" 24 Restored Aug. 13, 1888 rights in full.
" 25 Restored March 1, 1889 rights.

The schedule of rights in force on Henrys Fork and Teton River is shown separately in the chapter covering distribution on Henrys Fork.

After September 30 the various owners of early rights co-•perated in reducing their demands as much as possible and in this manner it was possible to provide stock water in practically all

ditches after October 1. The demand for water, however, was such that it was necessary to continue employment of river riders three days a week on the main river until October 15 and one man on Henrys Fork until October 24. General rains and freezing weather then reduced the demand so that it was possible to cease regulation.

WATER SUPPLY

By reference to Plates No. 4 and 5 it will be noted that 1935 was the 7th successive year of below normal run-off on Snake River at both Moran and Neeley. At the latter point the 1935 run-off was only 71% of the run-off in 1919 which at the time it occurred was considered a pretty dry year. The run-off at Neeley since the construction of American Falls Reservoir, however, has been decreased below what it would otherwise have been due to several causes, chief among which are:

1st. - Increased use of Jackson Lake water by upper valley canals through exchange for their American Falls rights, and,

2nd. - seepage and evaporation losses in the American Falls Reservoir. Even making liberal allowance for these two items the run-off at Neeley during recent years has been proportionally much lower than at Moran and indicates that the lower drainage area on the river watershed below Moran has suffered a greater proportional decrease in run-off than has occurred on the high watershed above Moran.

The annual run-off in acre-feet for the year ending Sept. 30, 1935 at some of the principal gaging stations in the district is shown in the following tabulation.

Run-off in Acre-feet.

Station	1935 run-off	Per cent of average
Snake River at Moran	933,670 (a)	89%
Snake River nr. Heise	4,111,890 (a)	80%
Snake River nr. Blackfoot	1,449,000	40%
Snake River at Neeley	3,289,500 (b)	55%
Snake River at Milner	112,700	4%
Henrys Fork nr. Rexburg	747,500	52%

(a) Corrected for holdovers at Jackson Lake.
(b) Corrected for holdovers at American Falls.

The long-continued deficiency in run-off that has existed on Snake River beginning in 1919 and which has become more apparent during the past seven years, is becoming a matter of increasing concern and unless soon relieved by years of more abundant precipitation will compel the adoption of methods for further conservation of water on the river, particularly the elimination of water now used for domestic purposes during the winter months.

TRANSFERS & EXCHANGES

Two permanent transfers of water rights on Sheridan and Ice House creeks to other nearby lands were made during the year by the Island Park Land and Cattle Company on account of the fact that the lands to which the water had been decreed will be flooded by the new Island Park Reservoir.

After the last of July when the rights were cut to early priorities a few temporary transfers of small quantities of natural flow rights were permitted between adjacent ditches in several sections of the upper valley where special circumstances seemed to warrant such action. During the same period several of the upper valley canals that had lost part of their natural flow rights were allowed to shut off entirely for varying periods, receiving credit for 90% of their valid rights, and then draw an equivalent amount of water later in sufficient volume so that it could be used more efficiently.

The custom of exchanging natural flow for storage on Henrys Fork was continued as in past years as this is the only way in which canals in that section can avail themselves of American Falls storage that they own or might rent.

LITIGATION

A decision in the District Federal Court was handed down during the year in the case of American Falls Reservoir District No. 2 vs. Secretary of the Interior, et al, denying the claim of the plaintiff to a summary decree for a natural flow right of the same priority as the American Falls Reservoir storage right. The case is now on appeal to the Circuit Court at San Francisco.

An action was filed in the State district court against the watermaster by the Teton Valley Power and Milling Co. seeking to acquire a summary decree for 300 second-feet for power purposes on Teton River, but has not yet been tried.

Water users on the lower Teton River in the Sugar City - Rexburg section filed an action in the Federal Court at Cheyenne seeking an interstate adjudication of the waters of Teton River and its Wyoming tributaries. The case has not yet come on for trial.

Chris Reber brought suit against the watermaster seeking a summary decree to six second-feet of the waters of Twin Crek, tributary to Henrys Fork, with a priority of June 1, 1912. The watermaster filed no answer and it appears probable that a decree will be issued as requested.

The String Canal Company brought an action against the watermaster early in August seeking to enjoin him from regulating the waters of Trail Creek near Victor. Injunction was granted but after being in force for a few days was vacated on Aug. 7 upon showing that the court was without authority to issue same under the terms of the State statutes relating to restraint of public officers.

The Capitol Hill Ditch Co. was awarded a summary decree for 20 second-feet of November 15, 1919 priority of the waters of Snake River to be diverted through the Great Western Canal in an uncontested suit against the watermaster.

Wilford Jones and Rulon H. Jones brought actions against the watermaster seeking to acquire summary decrees for 4.4 second-feet June 1, 1886 priority and 6 second-feet June 1, 1885 priority to the waters of Bear Trap Slough, a tributary of Snake River west of Menan. The Upper Snake River Protective Union filed an appearance for the defendant and after trial of the case the priority was fixed as of 1892 instead of the earlier dates asked for in the complaint.

The case of Busby vs. Crandall was tried in December, 1935 but decision has not yet been announced.

The plaintiff sought to acquire a right of 20 second-feet of 1888 priority to the waters of Fall River.

Suit was filed and is now pending seeking an adjudication of the waters of Market Lake, tributary to Snake River northeast of Roberts.

CANAL DELIVERIES

Diversions from the main river by the various canals between Heise and Blackfoot for the months May to September, 1935, incl. are shown on plates 6-10 incl. No regular records are secured of diversions by upper valley canals during the non-irrigation season but the following miscellaneous measurements are tabulated to give a general idea of such use, in connection with possibilities for elimination of winter diversions.

Winter diversions by upper valley canals
(sec. ft.)

Canals not reported above were dry.

Diversions by lower valley canals, below American Falls, for the entire year are shown on plates 32-41, incl. Upper valley canals between Heise and Blackfoot diverted practically no water for irrigation prior to May 1st but continued after September 30 to use practically all the available supply until the middle of October 1935 when irrigation ceased due to a storm and severe freeze.

The following tabulation shows the seasonal diversion, area under canal and acreage irrigated in 1935 along the main Snake River from Heise to Milner. A similar tabulation for Henrys Fork canals will be found in the chapter on that area.

The figures on irrigated areas in the table are based on reports from the various canal officers and are intended to represent the acreage to which water was delivered without deduction for roads, canals, buildings, waste or fallow land on individual farms, etc.

Table showing diversions and irrigated area during 1935 - Snake River Canals.

(a) Used some additional water from Willow Creek.
(b) 100,000 from Snake River, balance from Blackfoot River and Sand Creek.

Diversions for canals above Blackfoot cover the months May to September, incl., and for lower valley canals April to September, incl.

The total diversions for the season were about 1,000,000 acre-feet greater in 1935 than during the very dry year of 1934, although there were 19 out of the 61 canals that actually diverted less water in 1935 than in 1934. This was principally due to heavy diversions early in the season of 1934 by upper valley canals as the result of dry weather.

Canals between Heise and Blackfoot diverted 292,372 acre-feet of storage or 12% of their total diversions. Canals below American Falls diverted 1,249,469 acre-feet of storage equal to 45% of their total diversions.

In addition to the irrigation diversions listed in the preceding table the Idaho Power Co. carried 110,000 acre-feet of water during the year ending Sept. 30, 1935 past Milner for use at downstream power plants.

RIVER DATA

Segregation of river flow at the various measuring stations between storage and normal,diversions, stored water losses, etc., are shown on plates 11 to 13 incl. Methods of operation, stored water losses, etc., were the same that have been in effect for a number of years past.

Owing to the difficulty of measuring the widely variable inflow to Jackson Lake, the daily storage releases from that reservoir

were determined from the daily drop in lake levels, averaged when necessary for short periods to eliminate wind effect on the lake, and the balance at the Moran station was called natural flow. This method is based on the assumption that during the season as a whole the evaporation losses will be offset by bank storage return. The evaporation losses however, are a maximum when storage draft first begins while the bank return does not appear until the lake has been substantially lowered. On this account the custom is followed of permitting natural-flow rights to use some storage during the early draft on Jackson Lake and gradually replace this by natural flow after the lake has been partially drawn down. Ordinarily 10,000 to 12,000 acre-feet of storage is thus temporarily used by natural flow rights during the period of rapid drop in natural flow following the flood-water season, same being later gradually repaid.

Starting with the determined amount of stored water at Moran each day the storage diversions and storage losses were subtracted in each river section thus determining the amount of storage theoretically available daily at each river station as far down-stream as Blackfoot.

In the actual operation of the river from day to day it is impossible to exactly determine in advance the time for natural flow cuts or changes in canal discharges and there are also times when natural-flow rights are purposely allowed to divert some of the theoretical storage or vice versa, due either to allowance for the conditions at Jackson Lake as previously discussed or to changes in ground-water inflow to the river resulting from sudden increases or cuts in storage being discharged from Jackson Lake. It has been

found by experience that when a substantial increase in storage delivery is made from Jackson Lake it is necessary to turn out for a few days at least 25% more water than is needed for down-stream delivery in order to allow for river bank storage and to prevent the cutting of natural-flow rights that would otherwise receive water. This water is recovered for storage owners when cuts are made in the release from Jackson Lake, thereby permitting the river bank storage to drain into the stream.

Due to these and other causes it happens that from day to day throughout the season in the section above Blackfoot some stored water is usually being diverted as natural flow or vice versa, but the quantities are balanced out as closely as possible by the end of the season.

When rights are being filled to priorities later than Oct. 11, 1900 which is the date of the earliest lower valley right, the entire river from Heise to Milner is operated as a unit. After the 1900 rights are cut the river is operated in two sections, one above Blackfoot and the other below that point. After the 1900 rights are cut in the upper valley no natural flow is available for delivery past Blackfoot and except for Jackson Lake storage releases for lower valley canals the river would be kept dry at the lowest upper valley canal heading near Blackfoot. The 1900 rights in the lower valley are however always partially filled from inflow to the river below Blackfoot even though the river flow in the upper valley may drop so that only 1888 rights, for example, can be filled.

After rights were cut below 1900 priority, when no natural flow passes Blackfoot the segregation of flow at the Clough station was on the basis of an assumed natural flow at that point of 140 second-feet and any balance was called Jackson Lake storage for delivery to lower valley canals owning same. The 140 sec.-ft. is the discharge which it is estimated from past records would occur at the Clough station under 1935 conditions if no storage was being carried past the Parsons Canal heading, the lowest upper valley canal.

During the course of the season 149,000 acre-feet of alloted Jackson Lake storage was carried past Cloughs in addition to 86,000 acre-feet of storage to replace lower valley normal flow that was temporarily stored at Jackson Lake or diverted as storage by upper valley canals prior to July 9th.

The segregation of flow at the Neeley station below American Falls was made by taking the normal flow at Cloughs, increasing it by the calculated inflow Clough to Neeley, and calling the result normal flow at Neeley, the balance at Neeley in excess thereof being listed as storage.

The inflow Clough to Neeley was computed by adding: 1) the daily discharge of the Portneuf River at Pocatello; 2) inflow from springs, etc. secured by interpolating between the results of 13 meter measurements made during the months May to Sept. incl., and 3) the unmeasured inflow computed from the Newell formula $\pm$ 840 plus one-third measured inflow, disregarding minor day-to-day fluctuations.

The natural flow as computed at Neeley, was delivered without loss or gain to downstream canals according to their respective priorities and any additional amounts diverted by these canals were classed as stored water.

There were a number of days between May 15 and July 9, Clough dates, when some water accumulated in Jackson Lake or was diverted as storage by upper valley canals that belonged to downstream rights below Blackfoot. The records as computed on plates 11-13 show the available normal flow at the various river and canal stations as if this water had been allowed to flow down the river past Cloughs and the segregation of deliveries to lower valley canals was on the basis of such computed natural flow. Under the method of tabulation used this retained natural flow appears in the record at Cloughs and up-stream stations as a minus storage quantity and is offset later on in the season by delivery of a similar amount of storage.

STORED WATER DELIVERIES

Storage allotments from Jackson Lake and American Falls reservoirs were made as follows for 1935:

1935

Jackson Lake allotment

Jackson Lake contents June 25 (date of last storage for reservoir credit)		680,910 ac.ft.
Deduct 1934 American Falls holdover in Jackson Lake	2,464	
Stored normal flow at Jackson Lake prior to June 25(for delivery to American Falls Reservoir during 1935 to replace borrowed water)	60,700	
Total		63,164 " "
Available for allotment		617,746 " "

Allotted as follows:

Bottom rights in full	437,810 " "
N.S. Canal Co. top right	137,176 " "
Twin Falls Canal Co. top right	42,760 " "
Total	617,746 " "

1935

AMERICAN FALLS ALLOTMENT

Reservoir contents on date of last reservoir storage (June 18).	955,990 ac. ft.

* Includes 42,500 ac. ft. for winter savings

The special credit to the North Side Canal Co. for saved winter water is based on the terms of a contract between that company, the U. S. Bureau of Reclamation and the American Falls Reservoir District whereby the No. Side Canal Co. receives credit, out of the allotments for the government leased space and the American Falls Reservoir District space, for 50% of the amount by which it reduces its winter diversions below 600 sec. ft. during November to March incl., provided they are reduced below 500 second-feet.

Due to slight revision at the end of the season in discharge computations at some of the gaging stations there were a few changes in the final figures of storage use prior to the dates of reservoir allotments from those given in the preceding tabulations. Such changes however, were inconsequential and no revision was made in the original allotments.

During the years since the construction of American Falls Reservoir it has been the practice to credit to individual companies, at the time the reservoir allotments are made, the full amount of their holdover from the preceding year. Experience with this reservoir, discloses that substantial losses are experienced during the spring months when it is either holding about stationary or gaining slightly, although a gain generally occurs for a few months on the rapid drawdown later in the season. Considering the fact that the holdover water is held in the reservoir for a full year and that taking the year as a whole the reservoir suffers substantial losses it seems reasonable that some loss should be charged on water holdover from one year to another. While it is practically impossible

to compute such losses with any degree of precision on account of lack of complete records and many uncertain factors involved it would appear from a study of such information as is available that a deduction of about 3% loss on holdover storage should be charged in the future when making the reservoir allotment each year.

Daily storage diversions are shown on plate 14 by the various canals using storage on the main river. Henrys Fork Canals are grouped together on this tabulation but are shown separately on plate 22.

In order to take care of a serious situation under a number of canals where some additional water was essential to mature the principal crops a pool of water for rent was secured by writing all owners of storage and normal flow on the river and offering to pay 50¢ per acre-foot for any water that they cared to dispose of. By urgent solicitation it proved possible to secure about 28,000 acre-feet in this manner which was paid for and sold at 50¢ per acre-foot. Details are shown in the following tabulation:

Leo. R. Sauter

During the latter part of the season several canals that had lost most of their natural flow rights were permitted to shut off entirely at times and receive credit for 90% of their right. The other 10% went into a penalty charge, part of which was rented by the pool.

On September 30 the Minidoka Project had 50,300 acre-feet of unused Jackson Lake storage left in that reservoir in addition to 25,000 acre-feet of American Falls holdover. There were 222 acre-feet of Jackson Lake storage unused by other companies, or a total of 50,522 acre-feet of unused Jackson Lake rights left on September 30, 1935. The total holdover at Jackson Lake was 113,270 acre-feet so the remaining 62,748 acre-feet in Jackson Lake on that date was American Falls water which was retained in Jackson Lake for 1936 exchange with upper valley owners of American Falls space.

All owners of both Jackson Lake and American Falls space, except the Minidoka Project, elected to exhaust their Jackson Lake rights and retain all holdovers as American Falls water.

In addition to the individual American Falls holdovers listed on plate 14 there was a small gain from bank storage return in American Falls during the drawdown period after the reservoir allotment was made which was used in part to absorb the slight leakage through Milner dam when the Idaho Power Co. was not drawing storage past Milner and the balance was left to apply towards the general American Falls allotment in 1936.

The Gooding Project used 3,710 acre-feet for a stock water run about Nov. 1, 1935 so the final holdover for that project is 3,710 acre-feet less than that shown on plate 14 for September 30.

RIVER LOSSES AND GAINS

Losses and gains between river stations are shown by monthly averages in the following tabulations using time intervals shown on plate 15.

Gain in Snake River, Moran to Heise stations
1935

(Heise dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Moran	1,040	7,610	150,770	184,720	68,849	412,989
Heise	280,460	451,900	366,300	293,460	150,520	1,542,640
Riley ditch	155	731	661	399	161	2,107
Heise & Riley	280,615	452,631	366,961	293,859	150,681	1,544,747
Total gain s.f	279,575	445,021	216,191	109,139	81,832	1,131,758
Mean gain s.f.	9,019	14,830	6,974	3,521	2,728	7,397
Total gain a.f.	554,500	882,700	428,800	216,500	162,300	2,244,800

The gain or inflow in this section was about double the amount that occurred during the preceding dry year of 1934, the greatest increase occurring during June.

Gain in Snake River, Heise to Shelley stations
1935

(Heise dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Heise & Riley	280,615	452,631	366,961	293,859	150,681	1,544,747
Rexburg	57,491	64,006	16,111	20,745	27,531	185,884
Total supply	338,106	516,637	383,072	314,604	178,212	1,730,631
Diversions	71,210	241,105	240,387	172,702	133,057	858,461
Net supply	266,896	275,532	142,685	141,902	45,155	872,170
Shelley	254,740	272,380	148,080	144,360	59,468	879,028
Total gain s.f.	-12,156	-3,152	-5,395	2,458	14,313	6,858
Mean gain s.f.	-392	-105	174	79	477	45
Tot. gain s.f.	-24,110	-6,250	10,700	4,880	28,390	13,610

The gain in this section, particularly during the last three months, showed some improvement over 1934 conditions but is still far below normal. A year of high river run-off with resulting heavy contributions to the ground water from river losses above Lorenzo and large canal diversions sustained throughout the season will be required to restore conditions that were formerly considered normal in this section of the river.

Loss in Snake River, Shelley to Clough stations
1935

(Shelley dates and 24.-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Shelley	252,910	274,850	148,840	146,420	60,280	883,300
Blackfoot River	3,045	950	257	0	0	4,252
Total supply	255,955	275,800	149,097	146,420	60,280	887,552
Diversions	68,006	103,812	93,303	51,686	31,358	348,165
Net supply	187,949	171,988	55,794	94,734	28,922	539,387
Cloughs	175,560	163,830	45,602	83,431	17,777	486,200
Total loss s.f.	12,389	8,158	10,192	11,303	11,145	53,187
Mean loss s.f.	400	272	329	365	372	348
Tot. loss a.f.	24,570	16,180	20,220	22,420	22,110	105,500

Actual losses in this section were about the same as during 1934 although the percentage loss was less due to larger volume of discharge. The overall loss in this section during 1935 amounted to 6% of the discharge at Shelley over and above about 140 sec.-ft. additional loss represented by ground-water inflow into the river above the Clough station during the period covered by the records.

The Thompson station near Pingree, above American Falls Reservoir backwater was temporarily reestablished and operated during the 1935 season for the purpose of determining gains between Cloughs and Thompson. Nearly one-half of the unmeasured gain to American Falls Reservoir, as computed by the Newell formula, occurs between the Clough and Thompson stations and records during occasional years of the gain between these points are of value to determine whether there has been any change in inflow conditions. Measuring conditions at the the Thompson station are such that reliable records can not be secured during years of high discharge.

Gain in Snake River, Clough to Thompson stations
1935
(24-hr. sec. ft. except as noted)

Station	April	May	June	July	Aug.	Sept.	Season

Reservoir draft	-4,520	70,110	217,880	107,880	68,860	460,210
Total supply	258,013	313,349	337,417	268,329	160,839	1,337,947
Neeley	246,040	306,590	341,510	272,520	162,160	1,328,820
Tot. loss s.f.	11,973	6,759	-4,093	-4,191	-1,321	9,127
Mean s.f.	386	225	- 132	- 135	- 44	60
Tot.loss a.f.	23,750	13,410	-8,120	-8,310	-2,620	18,110

Due to heavy reservoir losses early in the season, prior to drawdown, there was a net loss during the five months period of 18,110 acre-feet. The reservoir allotment was made as of June 18 when storage ceased and the losses up to that date were automatically absorbed by the reservoir. After that date there was a net reservoir gain of 13,600 acre-feet up to the close of the season on September 30, due to returning bank storage resulting from rapid drawdown of the reservoir.

Daily discharges of the inflow between Clough and Neeley are shown on Plate 10-A, computed in the same manner as during the preceding year.

Loss in Snake River, Neeley to Minidoka stations

1935

(Minidoka dates & 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Neeley	244,530	305,950	341,280	273,200	164,440	1,329,400
Walcott release	- 635	1,390	232	22,530	13,420	36,937
Total supply	243,895	307,340	341,512	295,730	177,860	1,366,337
No. Minidoka	29,399	40,845	48,200	40,440	28,015	186,899
So. Minidoka	21,459	33,103	38,420	37,070	25,999	156,051
Minidoka	190,890	225,230	247,530	214,670	129,910	1,008,230
Total use	241,748	299,178	334,150	292,180	183,924	1,351,180
Tot. loss s. f.	2,147	8,162	7,362	3,550	-6,064	15,157
Mean loss s. f.	69	272	237	115	- 202	99
Tot. loss a. f.	4,260	16,190	14,600	7,040	-12,030	30,060

The net loss in this section amounted to 30,060 acre-feet during the five-months period. The gain of 12,030 acre-feet during September was return bank storage due to drawdown of Lake Walcott.

Gain in Snake River, Minidoka to Milner stations
1935

(Milner dates and 24-hr. sec.-ft., except as noted)

Station	May	June	July	Aug.	Sept.	Season
Minidoka	189,210	224,855	247,370	214,975	133,015	1,009,425
P.A.	1,346	1,803	1,916	1,900	1,468	8,433
Gooding	46,907	56,072	63,092	58,086	18,359	242,516
Milner Low Lift	2,630	3,744	3,901	3,805	2,447	16,527
N. Milner	55,011	72,570	75,820	49,880	31,453	284,734
S. Milner	84,060	89,900	101,710	105,800	80,020	461,490
Milner	306	1,290	272	3,097	8,131	13,096
Total use	190,260	225,379	246,711	222,568	141,878	1,026,796
Tot. gain s.f.	1,050	524	-659	7,593	8,863	17,371
Mean gain s.f.	34	17	- 21	245	295	114
Tot. gain a.f.	2,080	1,040	-1,310	15,060	17,580	34,450

During the period of storage draft a net gain of 13,400 acre-feet between Neeley and Milner was credited to the Minidoka Project in computing the holdover for that project a s shown on page 24.

DISTRIBUTION ON HENRYS FORK

Water distribution on Henrys Fork and its tributaries was again under the immediate supervision of Melvin Luke with headquarters at St. Anthony.

Due to lack of storage supplies a number of canals in this section were seriously short of water after midsummer, although the situation was relieved to a certain extent, in some instances, by rentals from the Pool to finish irrigation of the more valuable crops.

Henrys Lake yielded 18,600 acre-feet or 23% of its capacity and 20,679 acre-feet of Jackson Lake storage (less 7.26% loss) was supplied to various canals by exchange for natural flow. Of this amount 10,345 acre-feet represented the American Falls right of the Enterprise Irrigation District and the balance was rented from the Pool.

The Utah Power & Light Co. was obliged to drain the water late in the summer from behind their Ashton power dam to make repairs and thus made available about 7,000 acre-feet, without charge, for distribution to various canals suffering the greatest shortages. This water was later replaced by cutting the St. Anthony and Egin canals to a reduced head until the power pond was refilled.

About 60,000 acre-feet was carried past the lowest canal heading on Henrys Fork during July and August for delivery to prior rights on the main river.

A cooperative investigation with the U. S. Bureau of Reclamation was carried on during the year seeking to determine the natural gain through the Island Park Reservoir site prior to construction of the dam. Measuring stations were maintained on Henrys Fork above and below the reservoir and on all tributaries at points above the reservoir flow line. There are a number of springs tributary to the river in this reservoir site and the information secured by the measurements made during 1935 is expected to be of value in segregating stored water and normal flow after the Island Park dam is built, and in determining possible losses.

The following regulation schedule was in effect on Henrys Fork and Fall River:

June 26 Cut to 1900 priority.
July 3 Cut 50% June 1, 1896 rights.
July 9 Cut Nov. 5, 1895 rights.
July 10 Cut 50% June 14, 1895 rights.
July 14 Cut 25% June 1, 1892 rights.

Balance of year same schedule as main river shown on pages 5-6.

The following schedule was in effect on Teton River:

July	12	Cut rights later than June 1, 1894.
July	15	Cut rights later than June 1, 1885.
July	26	Filled 63% of June 1, 1885 rights.
Aug.	3	Filled one-third of June 1, 1885 rights.
Aug.	13	Cut off 1885 rights.
Sept.	19	Filled 60% June 1, 1884 rights.
Sept.	24	Filled 25% June 1, 1884 rights.

Daily diversions by Henrys Fork canals are shown on plates 16 to 20 incl. and segregation of flow at the various river stations, storage diversions, etc., are shown on plates 21 and 22.

Percentage ownership in Henrys Lake remained the same as during the preceding year. The customary transmission losses on storage of 1.5%, Lake to Warm River, and 0.5%, Warm River to Ashton, were charged as in past years.

The following tabulation of irrigated areas and diversions in the Henrys Fork section is similar to that previously given for the main Snake River. As has been pointed out in previous reports some of these canals suffered shortages considerably greater than would be indicated by their seasonal diversions in acre-feet. Due to fear of impending deficiencies in supply they divert heavily during the early part of the season, far in excess of actual requirements in many instances, and then are seriously short or without water during August and September. — pre-Island Park condition

Table showing diversions and irrigated areas
Henrys Fork Canals - 1935

(a) Excludes 250 acre-ft. carried for Canyon Creek District.
(b) Includes 1,500 acre-ft. pumped into canal west of Rexburg
The period of record in the preceding tabulation is May to Sept., incl.

The total diversions for the season of 1935 were 240,000 acre-feet or 45% greater than during the previous dry year of 1934.

The following miscellaneous measurements of winter diversions by various canals on Henrys Fork and tributaries are tabulated as a matter of information.

Discharge in sec.-ft.

Canal	Date	Disch	Date	Disch.
Fall River	Jan. 15, 1935	14	Dec. 7, 1935	25

River losses and gains in the Henrys Fork Basin

The following tabulation shows losses and gains by months in various river sections on Henrys Fork, Fall & Teton rivers. The following time intervals have been used in preparing the tabulation.

Lake to Island Park	1 day
Island Park to Warm River	1 day
Warm River to Ashton	1/2 day
Ashton to St. Anthony	1/2 day
St.Anthony to Rexburg	1/2 day
Squireel to Chester	1/2 day

Gain in Henrys Fork, Lake to Island Park stations - 1935.
(Island Park dates and 24-hr. sec. ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Lake	61	60	5,830	3,772	942	10,665
Island Park	25,788	19,199	17,706	14,842	11,551	89,086
Total gain s.f.	25,727	19,139	11,876	11,070	10,609	78,421
Mean gain s.f.	830	638	383	357	354	513
Total gain a.f.	51,030	37,960	23,560	21,960	21,040	155,550

The gain in this section was 55% greater than during the preceding year, most of the increase occurring from snow run-off during May and June.

1935

Gain in Henrys Fork, Island Park to Warm River stations
(Warm River dates and 24-hr. sec.-ft., except as noted)

Station	May	June	July	Aug.	Sept.	Season
Island Park	25,528	19,549	17,535	15,090	11,573	89,275
Warm River	41,040	29,706	28,031	25,431	20,807	145,015
Total gain s.f.	15,512	10,157	10,496	10,341	9,234	55,740
Mean gain s.f.	500	339	339	334	308	364
Tot. gain s.f.	30,770	20,150	20,820	20,510	18,320	110,570

The gain in this section was quite uniform throughout the season after the local snow melted during May.

Except during the snow melting season in May the gain is practically all supplied by ground-water inflow. Slightly less than one-half of this inflow is supplied by the Buffalo River and the remainder enters Henrys Fork from springs in the canyon below Island Park basin.

Gain in Henrys Fork, Warm River to Ashton stations
1935

(Ashton dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Warm River	41,085	29,921	27,921	25,579	20,824	145,330
Ashton	59,130	41,920	36,490	32,526	31,312	201,378
Total gain s.f.	18,045	11,999	8,569	6,947	10,488	56,048
Mean gain s.f.	582	400	276	224	350	366
Total gain s.f.	35,790	23,800	17,000	13,780	20,800	111,170

Nearly all the gain in this section is supplied by inflow from Warm River and Robinson Creek. About 7,000 acre-feet of the indicated gain during September was due to draining the Ashton Reservoir of the Utah Power & Light Co.

Gain in Fall River, Squirrel to Chester stations
1935

(Chester dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Squirrel	47,318	59,115	21,132	16,456	14,540	158,561
Diversions	9,590	22,681	16,145	6,284	4,664	59,364
Chester	45,562	42,730	6,367	9,930	10,593	115,182
Total acct. for	55,152	65,411	22,512	16,214	15,257	174,546
Total gain s.f.	7,834	6,296	1,380	- 242	717	15,985
Mean gain s. f.	253	210	44	- 8	24	104
Tot. gain a.f.	15,540	12,490	2,740	- 480	1,420	31,710

Gain in Henrys Fork, Ashton to St.Anthony stations
1935

(St.Anthony dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Ashton	59,145	42,290	36,380	32,675	31,312	201,802
Chester	45,142	43,282	6,608	9,737	10,620	115,389
Total supply	104,287	85,572	42,988	42,412	41,932	317,191
Diversions	33,526	31,576	22,079	14,637	11,185	113,003
St.Anthony	72,200	55,490	22,492	27,224	30,017	207,423
Tot. acct. for	105,726	87,066	44,571	41,861	41,202	320,426
Tot. gain s.f.	1,439	1,494	1,583	- 551	- 730	3,235
Mean gain s.f.	46	50	51	- 18	- 24	21
Total gain a.f.	2,850	2,960	3,140	-1,090	-1,450	6,410

The loss during Aug. & Sept. is probably due to decreased diversions by Fall River canals during those months and resulting drop in water table adjacent to Henrys Fork in this section.

Loss in Teton River, St. Anthony station to lowest diversion
1935
(24-hour sec.-ft. except as noted)

Station	July	Aug.	Sept.	Period
St. Anthony	24,437	17,205	14,260	55,902
Diversions	24,406	15,620	11,950	51,976
Total loss s.f.	31	1,585	2,310	3,926
Mean loss s.f.	1	51	77	43
Total loss a.f.	61	3,140	4,580	7,780

No water was passing the lowest diversion during July, Aug. and Sept., although water was doing so in prior months.

Gain in Henrys Fork, St. Anthony to Rexburg stations
1935
(Rexburg dates and 24-hr. sec. ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
St. Anthony	71,810	56,294	22,528	27,049	30,066	207,747
Teton River	9,892	11,257	0	0	0	21,149
Total supply	81,702	67,551	22,528	27,049	30,066	228,896
Diversions	29,770	26,752	21,730	15,312	11,575	105,139
Rexburg	57,491	64,006	16,111	20,745	27,531	185,884
Tot. acct. for	87,261	90,758	37,841	36,057	39,106	291,023
Total gain s.f.	5,559	23,207	15,313	9,008	9,040	62,127
Mean gain s.f.	179	774	494	291	301	406
Total gain a.f.	11,030	46,030	30,370	17,870	17,930	123,230

The total gain in this section during the above period from ground-water inflow and surface waste, resulting from upstream irrigation, amounted to 16% of the seasonal diversions by canals from Henrys Fork, Fall and Teton rivers.

REGULATION IN TETON BASIN

R. L. Sutcliffe was appointed as deputy watermaster and started work on July 18, following request made for regulation a few days previously. The usual difficulties were immediately encountered in attempting to enforce regulation and decrees could not be enforced for more than a few days at a time until Teton County was placed under martial law by the Governor in connection with a strike of

pea pickers. With the assistance of a squad of national guardsmen camped at each headgate, the various Teton Basin headgates were finally closed down on Aug. 16 and remained under regulation in this manner for a month. By Sept. 15 the flow of the various streams had dropped so that regulation was discontinued.

Following are the results of various measurements made in connection with regulation in Teton Basin during 1935.

Trail Creek measurements - 1935

Miscellaneous measurements - cont'd.

Stream	Date	Gage	Disch.(sec.ft.)
Fox Creek above diversions	July 25		31.2
do.	July 30		28.0
do.	Aug. 18		16.0
do.	Sept. 5		9.3
Warm Creek below diversions south of Victor	Aug. 17		7.4
do.	Sept. 11		5.5
String Canal at head	Aug. 5	0.20	31.2
Spring Creek at Breckinridge gate near Tetonia	Aug. 2		13.6
Packsaddle Creek above diversions	July 28		1.6
Horshoe Creek above diversions	July 28		5.8
Mahogany Creek " "	July 28		5.9

At the time of the measurement of 13.6 sec. ft. on Spring Creek on Aug. 2, this stream had all been flowing down the creek for the preceding 24 hours and was sinking before reaching Teton River. The Fox Creek discharge of 28 sec.-ft. on July 30 was turned down the creek, except 5 sec.-ft. for stock water, and lacked about 1/4 mile of reaching live water 24 hours later and was making no further progress downstream.

A similar test on Fox Creek was made during the latter part of August, lasting several days when the discharge was 16 second-feet, but the water did not progress as far downstream as it did at the time of the earlier test.

The following miscellaneous measurements were made at various points in the Henrys Fork area.

Stream	Date	Discharge (sec.ft.)
Pump into Teton Island Feeder Canal, $2\frac{1}{8}$ mi. W. and 3/4 mi. N. of Rexburg	Aug. 28, 1935	9.4
Pump into Rexburg Canal W. of Rexburg	Aug. 1, 1935	12.0
Conant Cr. Canal at head	July 31, 1935	18.2
Canyon Creek Canal at head	Aug. 2, 1935	9.4
do.	Aug. 8, 1935	8.7
do.	Aug. 24, 1935	8.1

DISTRIBUTION IN SWAN VALLEY

Chas.Burton was selected by the users in this section as their local watermaster and his services were paid for directly by them. After water became short along in July the users in this section rented a total of 1562 acre-feet from the Pool which was estimated as the amount that would reach the river if the rights on the several creeks in this section were regulated according to river priorities. Under this arrangement the users diverted the full flow of the various creeks during the latter part of the season.

CLIMATOLOGICAL DATA

Monthly records showing actual and normal precipitation at eight long-time record stations are shown in the following tabulation.

The accumulated precipitation during the winter months was about up to normal at most of the stations when the irrigation season began in May but a marked deficiency in precipitation occurred at every station for each month during the 4 months June to Sept. incl. The almost total lack of summer precipitation in the irrigated sections resulted in a heavy demand for water by those canals with adequate supplies At the same time the shortage of precipitation on the upper watershed caused a steady decrease in the natural flow supply and resulted in cuts to earlier priorities than seemed likely at the beginning of the season.

Weather conditions were on the whole favorable for crop production and fairly satisfactory yields of most crops were generally secured even in those areas that had their water supply curtailed during the latter part of the season. The potato, beet and apple crops suffered substantial damage in individual instances due to continued severe freezing weather beginning about the middle of October. Some damage was suffered by the bean crop due to blight.

CONSTRUCTION WORK

A new cable was installed at the Rexburg station to replace the old one that pulled apart during 1935 after 27 years of service. Minor repairs were made at several other stations. The U. S. Bureau of Reclamation installed automatic recorder stations on Henrys Fork for use in operating the Island Park Reservoir.

EXPENDITURES DURING YEAR ENDING DEC. 31, 1935

Engineers & Hydrographers

Lynn Crandall,	Salary	1 year		$4800.00

NOTES

1. Rented from Pool
2. Rented 250 a.f. to Pool, 5900 a.f. transferred from Enterprise.
3. Transferred to Progressive Irr. District.
4. Rented to Pool.
5. Rented 80 a.f. to Pool, received 600 a.f. by transfer from Reid.
6. From Reid -
7. 779 a.f. to Lenroot, 600 a.f. to Sunnydell, 450 a.f. to Pool.
8. 4200 a.f. yield of Twin Lakes, less 431 a.f. transfer to Reservation
9. 431 a.f. from Osgood, 5819 a.f. from Pool.
10. 1500 a.f. from Milner Low Lift, 1990 from Minidoka Irr. Dist.
11. Lake Walcott right 96700 a.f. less 1990 a.f. transfer to Gooding.
12. 3000 a.f. from Idaho Power Co., less 1500 a.f. transfer to Gooding.
13. After deducting 4790 a.f. transmission loss on Jackson Lake right less rental.
14. After deducting 18200 a.f. transmission loss on Jackson Lake Right less 5000 a.f. rented by Idaho Power Co. to Pool
15. 5000 a.f. to Pool, 3000 a.f. to Milner Low Lift.
