STATE OF IDAHO

DEPARTMENT OF RECLAMATION

JAMES SPOFFORD, STATE RECLAMATION ENGINEER

C. A. BOTTOLFSEN
GOVERNOR

BOISE

January 11, 1944

Hon. C. A. Bottolfsen
Governor of Idaho
Building

Dear Governor Bottolfsen:

Herewith is transmitted the annual report of Lynn Crandall, watermaster and special deputy state reclamation engineer, for Water District No. 36, for the year 1943.

The report summarizes the operations connected with the distribution of the waters of the Snake River to the lands within this water district, which comprises over 1,000,000 acres and extends from the head waters of the river to the lands served by water diverted from Milner Dam.

This report discloses that 1943 was an unusually good water year and that all reservoirs filled to capacity and in addition 2,680,000 acre feet of surplus water in excess of Idaho Power rights spilled past Milner Dam to waste during the year ending September 30, 1943.

It is also noted from the report that considerable flood damage in the upper valley resulted from high spring floods. The Army Engineers have recently made a survey of this damage as well as making an estimate of costs of re-building dikes and enlarging the channel at several locations on the south fork of the Snake River between Heise and Roberts to take care of next spring's flood waters. Federal funds have been approved in the amount of $42,500 for this work and bids are now being advertised for the improvements.

The report also discloses that the 1943 run-off in general was about the same as that for 1927-28 and exceeded any that has occurred during the past fifteen years.

The water content in the snow cover of the watershed on January 1, 1944, is far below average. However, with the heavy carry-over of 1,763,000 acre feet in the reservoirs and better than average ground water conditions, the prospects for a fair water supply for the 1944 irrigation season may not be too discouraging.

The distribution of water in District No. 36 during 1943 was carried on in the usual efficient manner in cooperation with the water users, Committee of Nine, U. S. Geological Survey, U. S. Bureau of Reclamation and this Department.

Respectfully submitted,

James Spofford
State Reclamation Engineer.

JS:lt

STATE OF IDAHO
DEPARTMENT OF RECLAMATION
LYNN CRANDALL, WATERMASTER
IDAHO FALLS, IDAHO

WATER DISTRICT NO. 36

C. A. BOTTOLFSEN, GOVERNOR
JAMES SPOFFORD, COMMISSIONER

January 4, 1944

Mr. James Spofford
State Reclamation Engineer
State of Idaho
Boise, Idaho

Dear Sir:

Herewith is the annual report for 1943 of the operation of Water District No. 36. The report is similar in form to those that have been issued annually since 1919. Operations in this district, as you know, are carried on under an agreement between the U. S. Geological Survey, State of Idaho, and Snake River water-users. The work of collecting stream-flow records is combined with that of water distribution, each of the cooperating parties paying a part of the expense of the work in proportion to their respective interests.

The year was one of abundant run-off with ample water supplies. There were over 1,700,000 acre-feet of stored water still remaining in the Snake River reservoirs at the close of the 1943 irrigation season.

The advice and assistance that was always available from your Department has been especially appreciated. Thanks are also due to the members of the Committee of Nine for their interest and consideration of the problems confronting the District. The cooperation of the U. S. Bureau of Reclamation and its employees, the canal companies, deputy watermasters, hydrographers, etc., has contributed greatly to the efficient distribution of water in the District. Particular thanks are due to Henry C. Eagle and Charlotte M. Elg for their capable assistance in the preparation of this report.

Very truly yours,

LYNN CRANDALL

Watermaster.

INTRODUCTION

At the annual watermaster election of the District, held at Idaho Falls on March 1, 1943, 50 canals with 37,198 sec.-ft. of decreed rights were represented. Lynn Crandall was elected as watermaster for the ensuing year and the following were elected as members of the Committee of Nine:

> F. A. Miller, Chairman; E. H. Neal, Vice-Chairman; H. L. Crawford, J. E. Kelley, Eph Ricks, Hyrum Severson, N. V. Sharp, R. E. Shepherd, and A. E. Stanger.
>
> Advisory members: S. R. Marean, representing the Bureau of Reclamation, and L. W. Hastings, representing Teton Basin; John Lee, Secretary. Mr. Hastings, at his own request, was later replaced by F. C. Gillette.

Mr. Miller, who had been a member of the Committee since its organization in 1923 and chairman since 1936, died in June 1943.

The following schedule of stored water transmission losses, being the same as those used in recent years, was again approved by the waterusers for use during 1943: 2½% Moran to Heise; 4.4% Heise to Lorenzo; 0.5% Lorenzo to Shelley; 6% Shelley to Blackfoot; 4% Henrys Lake to Island Park; 2.0% Island Park to Warm River; 0.5% Warm River to Ashton.

The budget adopted for the year beginning April 1, 1943, amounted to $24,117.00, with provision for the apportionment of a year's cost at the end of September 1943 among all canals in proportion to the total amount of water diverted during the 1943 irrigation season. For this purpose the irrigation season was to be taken as April 15 to September 30 in the lower valley, May 1 to September 30 in the upper valley, and May 15 to September 30 on the headwater areas, Teton Basin, Island Park, and Swan Valley.

It was apparent from the snow surveys available at the time of the annual water meeting that a heavy run-off for 1943 could be anticipated. There was considerable flood damage in the upper valley but fortunately the precipitation during the spring months was below normal, otherwise the damage from floods would have been much more serious than it actually was.

All reservoirs filled to capacity and 2,680,000 acre-feet of surplus water in excess of Idaho Power Company rights was spilled past Milner to waste during the year ending September 30, 1943.

The snow melting period on the upper watershed began early and extended over a longer period than usual. As a result considerable water went into the ground and built up the ground water levels to a higher point than has occurred for many years past. This, together with a heavy return flow from the irrigated areas, provided a well sustained normal flow throughout the summer, so that rights earlier than August 18, 1894 priority were never cut.

An abundant supply was available to all canals that could be supplied with stored water, except a few canals on the north side of the river above Lorenzo, where a change in the river channel turned the main river flow away from their headgates and they got along on a reduced supply rather than go to the expense of digging new channels to their headings. Under several canals the "sub" was higher than usual, resulting in reduced diversion requirements at their river headings. Regulation began July 20 and was discontinued September 26, with 1,763,000 acre-feet, or 61% of capacity, remaining in the reservoirs. Even in this year of heavy well sustained natural flow, the use of stored water was in excess of 1,100,000 acre-feet and amounted to 39% of the combined reservoir capacity.

The Bureau of Reclamation continued its water supply and water conservation studies in connection with the proposed Palisades Reservoir, securing complete records of winter diversions by upper valley canals for the first time.

PERSONNEL

The persons engaged in water distribution during 1943 were as follows:

Lynn Crandall	Watermaster & Deputy Comm. of Reclamation
Henry C. Eagle	Assoc. Engineer & Deputy Watermaster.
Melvin Luke	Deputy Watermaster & Hydrographer at St.Anthony.
I. V. Goslin	Hydrographer.
Ray M. Berry	Hydrographer.
Charlotte M. Elg	Clerk.
Oleen Dummer	Deputy Watermaster & Hydrographer, Teton Basin.
D. W. Archibald	Deputy Watermaster, Henrys Fork.
J. Bohi	Deputy Watermaster, Henrys Fork and Lower Teton River.
Walter C. Lenz	Deputy Watermaster, Upper Fall River.
D. R. Crystal	Deputy Watermaster, Heise Division.
H. M. Bramwell	Deputy Watermaster, Rigby Division.
A. H. Bush	Deputy Watermaster, Idaho Falls Division.
Eugene Liljenquist	Deputy Watermaster, Blackfoot Division.
J. E. Gish & R. H. Rambo	Deputy Watermasters, Milner Dam.
F. S. Thomas	Deputy Watermaster, Swan Valley Division
S. R. Marean	Supt. Minidoka Project, Bureau of Reclamation.
A. W. Heath	Supt. Am. Falls Res., " " "
Glenn Simmons	Supt. Jackson Lake, " " "
S. Geo. Pilcher	Supt. Island Park Res., " " "
J. J. Taylor	Supt. Grassy Lake, " " "

Gage readers: H. L. Young, Joseph H. Bahr, Jr., James M. Fugal, S. P. Sorenson, Mrs. Irvin Siepert, D. R. Anthony, D. O. Rawson, T. E. Culley, A.J. Ayers, J. F. Johnson, J. A. Clough, Mrs. Levi Stone, and Geo. Ball.

SNOW SURVEYS

Records of the snow measurements on the Jackson Lake watershed as made by the Bureau of Reclamation from 1919 to date are given in the following table:

Table snowing average snow depth and water content in inches on Jackson Lake watershed
(Observations made 14-21st of each month)

1943	67	23.2	91	33.3	100	37.4	67	33.7
Average, inches	45	11.4	58	17.3	63	21.0	54	21.8

The above table is the average of results at Moran, Moran Canyon, Arizona Station, Huckleberry Divide, Snake River Station, Coulter Creek, Lewis Lake Divide, Aster Creek, and Glade Creek.

The 1943 water content as a percent of average was as follows: January 203%, February 192%, March 178%, April 155%. The 1943 run-off at Moran was 137% of average.

The results of snow measurements by the Bureau of Reclamation on the Buffalo River watershed are shown in the following table. Buffalo

River, which enters Snake River about six miles below Moran, drains a region of high elevation and is one of the last of the Snake River tributaries to reach its peak flow each year.

Table showing average snow depths and water content in inches on Buffalo River watershed

Year	Feb. 1-6 Snow	Feb. 1-6 Water	Mar. 23-29 Snow	Mar. 23-29 Water

1941	36	9.3	46	14.6
1942	38	9.4	48	13.4
1943	67	22.7	74	29.7
Average inches	40	10.8	54	17.6

The foregoing figures are the average of results obtained at Turpin Meadows, Four-Mile Meadows, Black Rock, and Twogwotee Pass.

The 1943 snow survey on the Buffalo River watershed showed 210% of average in February and 169% late in March.

Beginning with 1936 snow surveys have been made available by the Irrigation Division, Soil Conservation Service, Department of Agriculture in cooperation with the Forest Service, Bureau of Reclamation, National Park Service, and State of Idaho. Results of such measurements at the principal stations on the upper Snake River drainage are as follows:

At the end of March 1943 the snow supply (water content) was the following % normal on different sections of the watershed: Jackson Lake vicinity 168%, Southern tributaries Jackson to Heise 145%, Island Park 146%, Fall River 136%, Teton River 164%. The run-off for 1943 was 137% of normal at Moran, 129% at Heise, 109% from Island Park, 124% on Fall River, and 130% on Teton River.

The decreased run-off compared to snow supply was due in part to deficient precipitation after April 1st, and in part to large contributions from the melting snow to ground water storage that had not drained out by the end of September 1943. The water records are for the year ending September 30 so they show the effect of 1942 water supply to some extent. The snow began to melt and go into the ground during March at many of the snow measuring stations, fully a month earlier than usual, and large contributions occurred during April.

REGULATION SCHEDULE

The following schedule shows priorities being filled during 1943. For the first time since 1927 the water supply on Teton River was sufficient to fill rights on that stream of the same priority being filled on Snake River, with water spilling past the lowest Teton River diversions into Henrys Fork throughout the season. There were a few days

about the end of July when the supply in Henrys Fork above Teton River was not quite sufficient to fill rights to as late a priority as were being filled on the Snake River schedule.

After August 12 there was no normal flow delivered past Blackfoot for lower valley canals, but inflow below that point was sufficient to fill part of the Oct. 11, 1900 rights of the Twin Falls and North Side Canals.

1943 REGULATION SCHEDULE

July 20	Cut off rights later than Aug. 6, 1908 priority.
" 21	Cut off rights later than Oct. 7, 1905 priority.
" 25	Filled part of Aug. 6, 1908 right.
" 29	Cut off 1906 rights.
Aug. 3	Cut off rights later than Mar. 6, 1903 priority.
" 13	Cut off 1899 rights.
" 14	Cut off rights later than June 1, 1895 priority.
" 15	Filled 90% Feb. 6, 1895 right.
" 17	Restored May 10, 1895 right.
" 19	Cut off rights later than Feb. 6, 1895 priority.
" 21	Filled 90% Feb. 6, 1895.
" 22	Filled 80% Feb. 6, 1895.
" 24	Filled 60% Feb. 6, 1895.
" 25	Filled 40% Feb. 6, 1895.
" 26	Filled 30% Feb. 6, 1895.
" 27	Filled 10% Feb. 6, 1895.
" 28	Cut off Feb. 6, 1895 right.
Sept. 1	Filled 10% Feb. 6, 1895.
" 3	Filled 30% Feb. 6, 1895.
" 4	Filled 40% Feb. 6, 1895.
" 5	Filled 60% Feb. 6, 1895.
" 6	Filled 70% Feb. 6, 1895.
" 7	Filled 60% Feb. 6, 1895.
" 9	Filled 50% Feb. 6, 1895.
" 10	Filled 40% Feb. 6, 1895.
" 12	Filled 20% Feb. 6, 1895.
" 14	Cut off Feb. 6, 1895 right.
" 16	Cut off all 1895 rights.
" 17	Filled 50% Aug. 18, 1894 right.
" 19	Filled 75% Aug. 18, 1894 right.
" 22	Filled 30% Feb. 6, 1895 right.
" 26	Restored June 1, 1905 rights and discontinued regulation.

Owing to large holdover in Jackson Lake at the close of the regulation season on September 26, the Bureau of Reclamation did not

close the gates but allowed natural flow to be discharged for some time thereafter. Release of stored water from Island Park Reservoir also continued until October 5. This provided a supply in excess of upper valley requirements for fall irrigation and substantial discharges flowed past the Clough station after regulation ceased.

WATER SUPPLY

Run-off at typical measuring stations for the year ending September 30, 1943, was as follows:

Station	1943 run-off (acre-ft.)	Average run-off (acre-ft.)	Years of record	1943 percent of average
Snake R. at Moran	1,417,000	1,033,000	40	137
Snake R. at Heise	6,512,000	5,056,000	40	129
Snake R. at Neeley	6,680,000	5,705,000	47	117
Fall R. nr. Squirrel	668,700	537,000	30	124
Teton R. nr. St.Anthony	694,100	531,000	16	130
Henrys Fork at Warm R.	780,800	715,000	29	109
Henrys Fork nr. Rexburg	1,707,000	1,386,000	35	123

The run-off at Moran and Heise has been corrected for Jackson Lake holdovers; at Neeley for American Falls holdovers; at Warm River for Henrys Lake and Island Park holdovers; at Rexburg for Henrys Lake, Island Park and Grassy Lake holdovers; at Squirrel for Grassy Lake holdovers; and at St. Anthony for discharge from Cross Cut Canal into Teton River.

The 1943 run-off was in general about the same as during 1927 and 1928 and exceeded anything that has occurred during the past 15 years.

The river reached a maximum mean daily discharge at Heise of 35,600 sec.-ft. on June 23, of which 11,500 sec.-ft. was natural flow being discharged from Jackson Lake, that reservoir having filled on June 15. The flow at Heise on May 31 was 26,100 sec.-ft., at which time 9,800 sec.-ft. were being stored in Jackson Lake. Except for this water being retained at Jackson Lake the flow at Heise on May 31 would have been as great as that actually occurring on June 23.

The Bureau of Reclamation spilled about 170,000 acre-ft. past the Moran gaging station prior to April 20, making that much space available for floodwater storage during late May and early June. After Jackson Lake filled on June 15 there were about 400,000 acre-ft. spilled past Moran that could have been retained for storage there if space had been available. The flood waters caused considerable alarm and some damage along Snake River in Jackson Hole, Wyo., during the period June 20-30, and the County Commissioners and leading citizens of Jackson Hole felt quite strongly that more water should have been spilled from Jackson Lake prior to the beginning of the snow melting period, so that the reservoir gates could have been kept closed during the high water period. This would have reduced the flood through Jackson Hole by about 10,000 sec.-ft. average during the peak period June 20-30. Some of the interested parties in Wyoming engaged a Consulting Engineer, Mr. C. C. Chambers, Chief Engineer, Muskingum Conservancy District of New Philadelphia, Ohio, to make a report on this matter and they had one conference and some correspondence with the watermaster at Idaho Falls.

Considerable damage also occurred along the River between Heise and Roberts and some flooding and lesser damage occurred in Bingham County between Firth and Blackfoot. The river cut a channel to quite a depth through the upper diversion dam for the Great Feeder. About 2,000 sec.-ft. overflowed the south bank of the river in the vicinity of the Lowder Slough heading and went on down the Lowder Slough into the Great Feeder. If this flow had increased much more or had continued for very long it probably would have cut sizeable channels that might be difficult to control. Jefferson County and the Great Feeder

Company built some dikes in this section during the late summer. Some flooding, bank erosion and overflow took place along both banks of the river a short distance east of Lorenzo, with the water running over the highway north of the Lorenzo bridge for about a week.

There was considerable flooding of farm lands along the south side of the river from the mouth of Henrys Fork to Roberts. Several thousand acres were reported to have been flooded in this area, partly pasture or hay lands.

There were several places between Heise and the mouth of Henrys Fork where the river changed its main channel somewhat, to the detriment of adjacent landowners and canal companies.

Spill past Milner in excess of Idaho Power Company rights amounted to 2,680,000 acre-ft., of which 500,000 acre-ft. occurred after American Falls Reservoir filled on June 22. A maximum discharge of 23,000 sec.-ft. was spilled over Milner dam on June 6, 1943, but no serious flood damage was reported at or below American Falls.

The maximum discharge from Jackson Lake was 13,300 sec.-ft. for a few hours on June 19. This compares with the peak discharge of 15,100 sec.-ft. recorded on June 12, 1918.

Total diversions of stored water amounted to 1,173,074 acre-ft. during the 1943 season, including 33,711 acre-ft. of stored water carried past Milner by the Idaho Power Company. Reservoir holdovers have increased each year since the low period in 1940, as will be seen from the following table:

Holdovers on Sept. 30 in Acre-feet.

	1943	1942	1941	1940	1939
American Falls	897,050	410,360	319,800	264,380	252,050
Jackson Lake	650,340	321,330	226,110	166,350	313,170
Lake Walcott	42,710	93,550	18,850	- 900	76,770
Henrys Lake	76,200	43,810	38,900	36,800	49,200
Island Park	84,050	60,620	39,230	17,050	52,700
Grassy Lake	14,750	10,910	8,170	520	0
Total	1,765,100	940,580	651,060	484,200	743,890

The holdovers on September 30, 1943 at Jackson Lake, Henrys Lake, Island Park, and Grassy Lake were the largest ever recorded. Greater holdovers at American Falls occurred in 1927 and 1928 but the Gooding Project was not drawing water at that time.

TRANSFERS AND EXCHANGES

During the year the following transfers were made under the provisions of the Idaho Transfer Statute:

Transfer No. 645 - From N. O. Nye in Rudy Canal, 5.14 sec.ft. June 1, 1885, 0.75 sec.-ft. Aug. 13, 1888, 0.23 sec.-ft. June 1, 1889, 0.11 sec.-ft. June 1, 1900, and 0.27 sec.-ft. June 1, 1905. These quantities less 5% river transmission loss were transferred to Abner C. Snarr, F. L. Hansen, and Earl Norris for use on lands lying under the Great Western Canal.

Transfer No. 646 - From Scottish American Mortgage Co. in Rudy Canal, 6.034 sec.-ft. Aug. 13, 1888, 1.818 sec.-ft. June 1, 1889, 0.846 sec.-ft. June 1, 1900, and 2.172 sec.-ft. June 1, 1905. These quantities less 5% river transmission loss were transferred to F. A. Stolworthy and Sons for use on lands lying under the Great Western Canal.

Transfer No. 647 - From Beneficial Life Ins. Co. in Parks & Lewisville Canal, 0.143 sec.-ft. June 1, 1883, 0.152 sec.-ft. June 1, 1884, 0.743 sec.-ft. June 1, 1885, and 1.562 sec.-ft. June 1, 1888. These quantities less 5% river transmission loss were transferred to lands under the Kennedy Ditch.

Transfer No. 649 - From Teton Irrig. & Mfg. Co. Canal to Siddoway Canal, 12.0 sec.-ft. of waters of Teton River, June 1, 1884 priority.

Transfer No. 650 - Abram Ward, 0.575 sec.-ft. of June 1, 1885 of waters of Snake River, from White Ditch to Everett Clay for use on lands under the Sunnydell Canal.

Transfers 645 to 647 were protested by the canal companies to whom the water was decreed, but after hearings the right to transfer was granted subject to the requirement that maintenance assessments be continued to be paid to the companies where the water was formerly used. The parties owning the water under Transfers 645-46 thereafter made a lump sum settlement with the Rudy Canal Company, compounding future maintenance assessments and relinquishing their stock. The 1943 Legislature modified the old transfer statute so that in the future the consent of the canal company to whom the water was decreed will be required in cases where water rights are represented by ownership of stock in such companies. This requirement will no doubt greatly curtail future transfers in the upper Snake River area.

Wagn Topp and Vern Park, stockholders in the Butler Island Canal made a permanent change in point of diversion for 6.4 sec.-ft. June 1, 1885, and 1.3 sec.-ft. Jan. 22, 1916 priorities from the Butler Island heading to a new ditch diverting from the Great Feeder further downstream.

Everybody had plenty of water in 1943 so there were no requests for temporary transfers or for credit for temporary shutouts.

LITIGATION

Decree was handed down in the District Court in the case of C. E. Carrington vs. Lynn Crandall, et al., denying the claims of the

plaintiff to any rights in the waters of Mahogany Creek, claimed to have been acquired by adverse use, in excess of rights awarded in the Rexburg decree. The decree awarded new flood water rights to several of the defendants, as follows:

Mr. & Mrs. Norma Dustin, 3.2 sec.-ft. of June 1, 1925 priority of the waters of Mahogany Creek for use on Lots 1 and 2, Sec. 7, T. 4 N., R. 45 E.

Mr. & Mrs. Henry Bates, 2.0 sec.-ft. of June 1, 1924 priority of the waters of Mahogany Creek for use on Lots 3 and 4, Sec. 7, T. 4 N., R. 45 E.

It is understood that the plaintiff has appealed this case to the State Supreme Court.

For the first time in many years there were no new suits filed naming the watermaster as defendant.

CANAL DELIVERIES

Daily diversions during the irrigation season from the main river between Heise and Blackfoot are shown on Plates 6 to 10 inclusive. Records of diversions by these same canals for the non-irrigation season Oct. 1942 to April 1943 were gathered by the U. S. Bureau of Reclamation under the direction of F. M. Clinton, Associate Engineer, and are tabulated on Plates 5A to 5G. Records on these canals were, in most cases, secured in cooperation with the canal companies who provided gage readings for the periods prior to beginning of regulation on July 20, supplemented by 3 or 4 visits per month by the hydrographers and by automatic gage records from a few of the largest canals.

Records of diversions by lower valley canals below American Falls for the entire year are shown on Plates 33 to 43 inclusive. Records of diversions by some of the larger canals on the headwater areas are

shown on Plate 23, but there are a number of small individual canals in Teton basin, Swan Valley, and Island Park that are only visited occasionally and on which no complete seasonal records are kept on account of the cost that would be required. There are also some lands irrigated from Spring Creeks near Menan and Springfield whose diversions are usually unregulated except when request is made for regulation by the parties using the water. An injunction was issued by the District Court some years ago against the watermaster restraining him from regulating the waters of the Spring Creeks near Springfield. The Spring Creeks near Menan are supplied from waste and seepage waters of adjacent canal systems and the water is diverted before reaching the river so some uncertainty exists there as to the right to regulate the water for the benefit of main river rights. The acreage involved is small, some of the rights are of early priority and both sections are in an area of tributary ground water to the river so the effect of this use on the river flow is probably slight, if any.

The following tabulation shows the seasonal diversions and irrigated area under canals diverting from Snake River between Heise and Milner. Similar data for canals on Henrys Fork are shown separately in the chapter covering distribution on Henrys Fork and tributaries. The figures on irrigated acreage in general show full acreage drawing water without deductions for roads, canals, small tracts of waste or idle land, etc., all of which probably comprise at least 12% of the reported acreage. The irrigation season is taken as May to September, inclusive, for upper valley canals, and April 15 to September 30 for lower valley canals.

Diversions during 1943 irrigation season
(Snake River Canals in downstream order from Heise)

Gooding Project	367,800	57,500	6.4
Total	6,201,428	953,959	6.5

(a) Received some additional water from Willow and Sand Creeks.
(b) About 1900 acres of this supplied thru Eagle Rock Canal after Aug. 17.
(c) 149,000 from Snake River, balance from Blackfoot R. and Sand Creek.

Total diversions were about 3.5% greater than in 1942 and in general represent all the canals cared to divert under the 1943 weather and crop conditions. Of the total diversions shown in the table, 52% were by lower valley canals and 48% by upper valley main river canals. If the diversions in the Henrys Fork area are also included the lower valley diversions would be about 45% and entire upper valley about 55% of the total diversions in the District.

Lower valley canals used 919,249 acre-ft. of storage or 28% of their total diversions. Upper valley main river canals used 163,964 acre-feet of storage or 6% of their total diversions. Henrys Fork canals used 55,750 acre-ft. of storage or 6% of their total diversions.

The Idaho Power Company drew 33,711 acre-ft. of its primary storage right past Milner during Aug.-Sept.

The following tabulation shows the amount of water used by months in various sections of the District during the past 10 years:

Diversions in Thousands of Acre-feet
Heise to Blackfoot

May diversions ranged from a little below to a little above average. June diversions were below normal throughout the District due to cold weather and rain in the irrigated areas. July to September diversions were above average everywhere and in the upper valley were the largest ever recorded.

A plentiful supply of water in the Wood Rivers during the early part of the season reduced the demand by the Gooding Project from Snake River.

RIVER DATA

Segregation of stored and normal flow at the various measuring stations is shown on Plates 12-13. The losses between river gaging stations as tabulated on these Plates were computed using the approved schedule of stored water transmission losses approved at the annual water meeting.

The standard procedure for segregation of stored water at the reservoir outlets and at the various measuring stations that has been used since 1930 was continued during 1943. At Moran the daily drop in Jackson lake is converted to second-feet and listed as stored water, the balance at the Moran station being called normal flow. Owing to wind effect on the Lake gage it is the usual practice to smooth out the computed quantities over short periods so as to avoid marked fluctuations in the computed daily normal flow. The total stored water,

however, passing the Moran station during the period of storage release is made to equal the drop in the Lake contents during the same period. This method of operation is based on the results of special investigations some years ago which disclosed that taking the whole season the return from bank storage at Jackson Lake just about equalled the evaporation losses on the additional area flooded by the construction of Jackson Lake dam. It is impractical and would be a considerable expense to try to secure daily records of the fluctuating inflow to Jackson Lake and the method used for segregation of stored and normal flow here was adopted on account of its simplicity and economy. It is realized that it results in a too low computed normal flow when the reservoir first starts to drop and a too high normal flow later on when the bank storage is draining back into the Lake. An attempt is made to adjust for this and for river bank storage on the stored water releases by delaying the normal flow cuts for a day or two during the early part of the storage use period until the normal flow users have used about 10,000 acre-ft. of stored water as normal flow, this amount being recovered for the storage users on dropping reservoir and river stages later in the season. The computed quantities of stored water at Moran less river losses and storage diversions and plus storage balances at Rexburg and storage inflow from Market Lake Springs are carried downstream as far as Blackfoot. After the 1900 rights are cut no more normal flow is supposed to pass the lowest canal diversion near Blackfoot and at such times the normal flow at Cloughs ranch was taken as 160 sec.-ft. estimated ground water inflow just above Cloughs plus the flow in Blackfoot river at the station near its mouth, the

balance at the Clough station being listed as stored water spilled past Blackfoot. Owing to fluctuations in the river flow and the impossibility of foreseeing and making cuts on upstream canals at the exact time their rights run out as well as allowing an overdraft on storage early in the period of storage use, it is impossible to make the daily theoretical storage balance at Blackfoot equal the daily storage quantities at Cloughs, but the total quantities at the two points for the season are balanced. The daily normal flow at Neeley is calculated as the daily normal flow at Clough plus the inflow Clough to Neeley, which is based on measurements about twice a month of the spring water inflow above the American Falls Reservoir flow line, plus daily records of Portneuf River at Pocatello and 1,320 sec.-ft. of estimated spring water inflow below the reservoir storage level.

The figures shown in the tabulations on Plates 12-13 as minus storage quantities represent the equivalent at that point of natural flow adversely retained in upstream reservoirs or diverted as storage by upstream canals, and is added to the actual flow at the station to get a computed normal flow that is used as the available supply for downstream normal flow deliveries.

In computing the seasonal totals of storage quantities at the various gaging stations the minus items are offset by the delivery of an equivalent total amount of stored water at other times during the season.

Measurements of the various springs and wasteways flowing into American Falls Reservoir were made on the following dates: May 3-4, June 2-3, 11-12, 21-22, July 2-3, 19-20, Aug. 3-4 and Sept. 3-4. Daily

records were secured of the flow of Portneuf River at Pocatello, and Mr. E. H. Neal furnished daily estimates of the flow in the principal wasteways from the Aberdeen-Springfield Project. Based on the Newell formula and past observations the unmeasured inflow to the reservoir was taken as 1,320 sec.-ft. The daily reservoir inflow between Clough and Neeley as computed from this data is shown on Plate 11.

The daily normal flow at Neeley is delivered to the downstream canals in accordance with their respective priorities and any additional water being diverted by them is classed as storage. Under this system of tabulation the gain from Neeley to Milner is called storage and is allocated to the Minidoka Project on days that such project is diverting stored water.

STORED WATER DELIVERIES

American Falls Allotment 1943

Reservoir contents July 16 - 54.84 g.h., Contents 1,719,170 acre-feet.

The surplus above rated capacity of 1,700,000 acre-feet was allotted pro rata to all storage holders.

Jackson Lake Allotment 1943

Last storage for Jackson Lake priority July 17, Lake gage 69.24, Contents 853,120 acre-feet.

The surplus above rated capacity of 847,000 acre-feet was allotted pro rata to all storage holders.

Under the terms of the American Falls lease the Government withheld 50,000 acre-ft. of space during 1943 for rent to parties needing same. Owing to the plentiful supply of natural flow the demand to rent storage was less than usual and it was only possible to rent 15,312.3

acre-feet of the withheld lease water during 1943. 11,500 acre-ft. were rented to participants in the lease at 15¢ per acre-ft. and 3812.3 acre-ft. were rented to other parties at 30¢ per acre-ft. The canals renting this water and quantity secured by each are shown on Plate 14.

Several of the participants in the lease listed some of their lease water for re-sale during 1943, but as the Government was not able to dispose of all of its 50,000 acre-ft. of reserved lease space there was no market for the additional water offered for rent.

The allotment of Lake Walcott storage was 94,250 acre-ft., the Lake contents on July 16 when storage draft on American Falls reservoir began. The Minidoka Project was also allotted 42,422 acre-ft. gain Neeley to Milner during the period of storage use on that Project.

The discharge from Market Lake Springs into the river during the period of storage use amounted to 921 acre-feet. This is water that would naturally percolate from Market Lake westward under the desert north of Roberts, but by means of artesian wells and a drainage canal is discharged into the river northeast of Roberts.

There were 6,000 acre-ft. of unallocated gain Neeley to Milner in excess of that used by the Minidoka Project and there were 15,586 acre-ft. of unallocated gain in American Falls reservoir during the period of storage use. All of the canals that would have been entitled to this water had large storage holdovers so the 21,586 acre-ft. total of these two items was left in American Falls reservoir at the close of the season.

Daily storage diversions and allotments of main river canals are shown on Plate No. 14 and those for Henrys Fork canals on Plate No. 22.

There were a total of 10,944 sec.-ft. or 21,707 acre-ft. of stored water carried past the Clough gaging station during the season. This could have been held at a lower figure but the large holdovers in up-stream reservoirs rendered it unnecessary and enough water was spilled by Blackfoot to facilitate regulation and save the canals the expense of too much work on their diversion dams.

Stored water releases from Island Park Reservoir continued until October 5, due to the desire by the Bureau of Reclamation to draw down the water level in it. This water was in transit from Island Park to American Falls at and after the close of the irrigation season.

RIVER LOSSES AND GAINS

Losses and gains between river stations are shown by monthly averages in the following tabulations using time intervals given on Plate 15.

Gain in Snake River, Moran to Heise Stations, 1943
(Heise dates and 24-hr. sec.-ft. except as noted.)

Station	May	June	July	Aug.	Sept.	Season
Moran	2,563	139,954	141,040	98,172	70,658	452,387
Heise	469,480	716,600	573,800	287,660	192,570	2,240,110
Riley Ditch	445	587	771	521	166	2,490
Heise & Riley	469,925	717,187	574,571	288,181	192,736	2,242,600
Total gain s.f.	467,362	577,233	433,531	190,009	122,078	1,790,213
Mean gain s.f.	15,076	19,241	13,985	6,129	4,069	11,701
Tot.gain ac.ft.	926,999	1,144,925	859,896	376,877	242,138	3,550,835

Eighty percent of the run-off at Heise during the above period came from the drainage area below Moran. During July the gain was double what it was in the same month in 1942, while for the season as a whole it was 60% greater than a year ago.

Gain in Snake River, Heise to Shelley Stations, 1943
(Heise dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Heise & Riley	469,925	717,187	574,571	288,181	192,736	2,242,600

All the canals had an ample water supply in 1943, which probably resulted in more waste to the river and greater groundwater inflow just above the Clough station than usual. The long continued muddy flood waters also doubtless helped to tighten the river bed and reduce the rate of seepage loss.

Loss or Gain in Snake River, Clough to Neeley Stations, 1943
+ is gain, - is loss
(Neeley dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season

Lake Walcott was drawn down to a low level for a considerable period during the 1942-43 winter to do some construction work and during the months Nov. 1942 to April 1943 there was a gain from Neeley to Minidoka of 125,000 acre-ft. This may have had some effect on the groundwater gain and loss around the upper half of Lake Walcott during the 1943 season as it is known that the Lake backs water underground into the lavas for a number of miles. Excessive precipitation occurred during June in this section, resulting in increased run-off from the tributary area below Neeley.

Gain in Snake River, Minidoka to Milner Stations, 1943
(Milner dates and 24-hr. sec.-ft. except as noted.)

Station	May	June	July	Aug.	Sept.	Season
Minidoka	307,580	574,540	397,640	268,040	190,940	1,738,740
P. A.	1,895	1,691	1,920	1,904	1,440	8,850
Milner Low Lift	4,973	3,174	5,249	5,206	4,188	22,790
Gooding	57,530	55,030	74,270	74,800	53,100	314,730
No. Side	71,550	64,900	81,290	82,940	60,217	360,897
So. Side	101,100	83,520	107,690	111,500	78,480	482,290
Milner	68,638	386,810	136,749	4,810	12,957	609,964
Total Use	305,686	595,125	407,168	281,160	210,382	1,799,521
Tot.gain s.f.	- 1,894	20,585	9,528	13,120	19,442	60,781
Mean gain s.f.	- 61	686	307	423	648	397
Tot.gain ac.ft.	- 3,756	40,829	18,898	26,023	38,563	120,557

No account is taken of changes in the level of Milner Lake in calculating gains in this section. The over-all gains or losses from Neeley to Milner are more accurate than those computed separately in the sections from Neeley to Minidoka and Minidoka to Milner as the rating at the Minidoka station is affected by variable backwater from moss growth.

The total gain from Neeley to Milner during the period of storage draft was

July 16-31	698	acre-ft.
Aug.	13,947	"
Sept.	33,777	"
Total	48,422	"

During the last week in September there were 6,000 acre-ft. of this gain in excess of stored water being diverted by the Minidoka canals. Deducting this amount of unallocated gain there were 42,422 acre-ft. credited to the Minidoka Project for the Neeley to Milner gain during 1943.

The Bureau of Reclamation made a number of measurements of return flow, losses, etc., in the upper valley during the winter of 1942-43 in addition to the measurements of canal diversions previously referred to. Mr. F. M. Clinton, Associate Engineer, who was in immediate charge of securing these records, has furnished the following tabulated results:

1942-43

Measurements of Return Flow Entering Snake River from West

Between Butte & Mkt. Lake Canal and Shelley Gaging Station

DISTRIBUTION ON HENRYS FORK

Mr. Melvin Luke, Deputy Watermaster at St. Anthony, continued in charge during 1943 of distribution on Henrys Fork, Fall River, and Lower Teton River. The water supply in this section was more than adequate for all demands and large holdovers existed in the reservoirs on September 30. Water spilled past the lowest diversions on Teton River throughout the season after filling all upstream demands, so it was unnecessary to carry any stored water through the Cross Cut Canal from Henrys Fork to Teton River.

Henrys Lake filled on June 29, 1943, and flowed over the spillway from June 30 to August 7 for the first time since its construction in 1923. The flow discharged into Henrys Lake through the Dry Creek Feeder Canal was so great during 1943 that it eroded quite a deep channel, due to the excessive grade beyond the end of the constructed canal, and deposited a large amount of eroded material in the old Henrys Lake outlet channel about 1/4 mile above the dam.

A channel will have to be cut through or around this filled in gravel, sand, and silt before the Lake can be drawn below the 9.0 ft. gage level (43,000 acre-ft.).

The natural flow of Fall River was adequate to meet all demands by canals on that stream and it was not necessary to release any storage from Grassy Lake.

In computing the segregation of normal flow and storage at the outlet of Island Park Reservoir the normal flow was credited with a 30 sec.-ft. daily reservoir loss from July 19 to August 15, which was recovered for the storage rights by crediting them with 30 sec.-ft. reservoir bank storage return flow from August 27 to September 23 on the falling reservoir stage.

The following amounts of water passed the lowest canal heading on Henrys Fork (Consolidated Farmers) during the period of storage use on Henrys Fork, August 3 to September 25:

Aug. 3-31	27,900	acre-ft.
Sept. 1-25	56,000	" "
Total	83,900	" "
Storage	9,200	" "
Normal Flow	74,700	" "

Rights on Henrys Fork and tributaries were regulated according to the Snake River schedule shown on page 10, except for a slight shortage for a few days about the last of July.

Stored Water Allotments

Fremont-Madison District

Island Park Reservoir

Contents July 19 — 133,350 acre-ft.

Grassy Lake

Contents July 19 — 15,260 acre-ft.

Yield of Sheridan Cr. Decree

July 18 to Sept. 25 — 2,027 acre-ft.

Total — 150,637 acre-ft.

The Sheridan Creek decree is a natural flow right that was originally appurtenant to lands now flooded by Island Park Reservoir. It was transferred to the lands within the Fremont-Madison District but it is more convenient to include it as a storage right rather than to make some arbitrary distribution of it as a natural flow right among the District canals.

Henrys Lake Allotment 1943

Contents July 18	82,157 acre-ft.
Est. dead storage and loss	3,000 " "
Available for allotment	79,157 " "

Allotted as follows:

	%	Acre-feet
Last Chance	15.3	12,111
St. Anthony Union	6.8	5,383
Salem Union	24.2	19,156
Egin	6.8	5,383
Independent	26.8	21,214
Consolidated Farmers	20.1	15,910
Total	100	79,157

9.13% of the Last Chance right was assigned to the Dewey Canal.

Storage deliveries and allotments are shown on Plate 22. The Fremont-Madison District allotted 106,631 acre-ft. to owners of rights in the District and rented 279 additional acre-ft. to such parties. To lands outside the District it made the following rentals:

Boom Creek Canal	108 acre-ft.
Squirrel Cr. Canal	82 " "
Island Park Users	140 " "
Canyon Creek Canal	1120 " "
Teton Basin Users	1649 " "

The water for the Canyon Creek Canal and Teton Basin Users was rented at 30¢ per acre-ft. to meet the rental price on Snake River as Snake River water could have been made available through exchange for Teton River users during all of 1943 without use of the Cross Cut Canal. Other rentals by the Fremont-Madison District were at 75¢ per acre-ft.

The segregation of flow at the various measuring stations from Henrys Lake to Rexburg is shown on Plate 21. The net retention of Snake River water by Henrys Fork users for the season ending September 28 appears on this Plate as a minus seasonal storage total at Rexburg of

1,318 sec.-ft. or 2,614 acre-ft. The Enterprise Canal diverted 13,291 acre-ft. of American Falls storage water so there were 10,677 acre-ft. of stored water from Island Park Reservoir that spilled past Rexburg during the above period. There were also an additional 4,600 acre-ft. of Island Park storage that spilled past Rexburg after Sept. 28 up to Oct. 7, due to the desire of the Bureau of Reclamation to draw down the water level in that reservoir.

The loss in Henrys Lake from July 29 to September 18 amounted to 1,468 acre-ft.

Rights on the lower Teton River were unaffected by the use of water in Teton basin during 1943 and an amount of water equal to all the storage used on Teton River was delivered from Island Park Reservoir past Rexburg for the benefit of Snake River users to replace the Teton River natural flow diverted as stored water.

The following tabulation is similar to that given on pages 18-19 for the Snake River Canals:

Diversions during 1943 Irrigation Season on
Henrys Fork, Fall River, and Lower Teton River.

Canal	Diversions (acre-ft.)	Area Irrigated (acres)	Diversions acre-ft. per acre.
Fall River Canals			
Yellowstone	1,200	1,000	1.2
Harrigfeld	0	0	0
Marysville	30,700	13,000	2.4
Farmers Own	11,200	7,800	1.4
Almy	0	0	0
Enterprise	34,600	5,843	5.9
Bell	1,730	160	10.8
Fall River	87,900	8,000	11.0
McBee	1,120	120	9.3
Chester	11,400	1,350	8.4
Silkey	2,030	520	3.9
Our	8,210	1,500	5.5
Total Fall River	190,090	39,293	4.9

Canal	Diversions (acre-ft.	Area Irrigated (acres)	Diversions acre-ft. per acre
Henrys Fork Canals			
Dewey	4,620	1,000	4.6
Last Chance	17,870	1,840	9.7
St. Anthony Union	124,100	10,000	12.4

Woodmanse-Johnson	5,330	1,200	4.4
City of Rexburg	10,160	1,200	8.5
Rexburg Irrig.	43,960	5,280	8.3
McCormick-Rowe	1,360	150	9.1
Saurey-Sommers	3,700	640	5.8
Total Lower Teton R.	231,360	29,136	7.9
Total Fall River, Henrys Fork, and Lower Teton River	899,780	112,969	8.0

(a) Also receives water through Consol. Farmers from Henrys Fork.

Stored water diversions on Henrys Fork and tributaries amounted to 55,750 acre-ft. or less than one-half of the storage used in 1942.

Records were secured of diversions during 1943 by some of the larger canals on upper Teton and Fall Rivers, as follows:

Canal	Diversions May to Sept. (acre-ft.)	Area Irrigated (acres)	Diversions Acre-ft. per acre
Conant Creek	5,080		
Squirrel Creek	1,010	700	7.3
Boom Creek	1,840	-	-
Canyon Creek	6,130	-	-
Fox Creek Irrig. Co.	15,200	2,500	2.4
String Canal	14,300	3,635	4.2
Trail Cr. Irrig. Co.	36,500	2,100	6.8
Grand Teton	36,300	4,500	8.1
		6,500	5.6

One trip was made during August regulating water in the Island Park region where the users rented 140 acre-feet of stored water.

River gains and losses in Henrys Fork Basin

The following time intervals have been used in preparing the tabulations by river sections:

Lake to Island Park	20 hrs.
Island Park to Warm River	14 hrs.
Warm River to Ashton	5 hrs.
Ashton to St. Anthony	5 hrs.
St. Anthony to Rexburg	12 hrs.
Squirrel to Chester	8 hrs.

Gain in Henrys Fork, Lake to Island Park Stations, 1943

(Island Park dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Lake	310	309	1,629	3,212	940	6,400
I. P. Res. release	-2,470	720	651	11,840	13,240	23,981
Total Supply	-2,160	1,029	2,280	15,052	14,180	30,381
Island Park	32,113	32,968	17,372	27,775	28,865	139,093
Total gain s.f.	34,273	31,939	15,092	12,723	14,685	108,712
Mean gain s.f.	1,106	1,065	487	410	490	711
Tot. gain ac.-ft.	67,979	63,350	29,934	25,236	29,128	215,627

The gain for the season was 34,000 acre-ft. greater than during 1942, about one-half of which occurred in June.

Gain in Henrys Fork, Island Park to Warm River stations, 1943

(Warm River dates and 24-hr. sec.-ft. except as noted.

Station	May	June	July	Aug.	Sept.	Season
Island Park	31,661	33,486	17,466	27,378	29,107	139,093
Warm River	55,030	47,220	31,256	39,521	40,960	213,987
Tot. gain s.f.	23,369	13,734	13,790	12,143	11,853	74,889
Mean gain s.f.	754	458	445	392	395	489
Tot. gain ac.-ft.	46,352	27,241	27,352	24,086	23,510	148,541

The seasonal gain was 24,000 acre-ft. greater than during the previous year.

Gain in Henrys Fork, Warm River to Ashton station, 1943

(Ashton dates and 24-hr. sec.-ft. except as noted

Station	May	June	July	Aug.	Sept.	Season
Warm River	55,001	47,403	31,308	39,371	41,041	214,124
Ashton	85,930	71,450	46,130	52,690	52,450	308,650
Tot. gain s.f.	30,929	24,047	14,822	13,319	11,409	94,526
Mean gain s.f.	998	802	478	429	380	618
Tot. gain ac.-ft.	61,347	47,696	29,399	26,418	22,629	187,489

The gain in this section, consisting almost entirely of inflow from Warm River and Robinson Creek, was about 44,000 acre-feet greater than in 1942. The computed gains disregard any changes in the level of the U. P. & L. forebay above its Ashton plant. Such changes are ordinarily of small magnitude.

Gain in Fall River, Squirrel to Chester stations, 1943

(Chester dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Squirrel	59,803	75,323	50,261	23,605	20,373	229,365
Diversions	8,610	19,005	21,583	18,924	11,661	79,783
Chester	62,910	62,700	31,288	6,867	10,218	173,983
Tot. acct. for	71,520	81,705	52,871	25,791	21,879	253,766
Tot. gain s.f.	11,717	6,382	2,610	2,186	1,506	24,401
Mean gain s.f.	378	213	84	71	50	166
Tot. gain ac.-ft.	23,240	12,659	5,177	4,336	2,987	48,399

The seasonal gain was about 6,000 acre-ft. greater than during

1942, practically all of which occurred in May during the snow run-off period.

Gain in Henrys Fork, Ashton to St. Anthony stations, 1943

(St. Anthony dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Ashton	85,907	71,750	46,211	52,540	52,548	308,956
Chester	62,833	62,879	31,616	6,894	10,190	174,412
Total Supply	148,740	134,629	77,827	59,434	62,738	483,368
Diversions	30,593	29,034	29,229	24,974	16,650	130,480
St. Anthony	120,880	106,090	51,839	36,677	48,680	364,166
Tot. Acct. for	151,473	135,124	81,068	61,651	65,330	494,646
Tot. gain s.f.	2,733	495	3,241	2,217	2,592	11,278
Mean gain s.f.	88	16	104	72	86	74
Tot. gain ac.-ft.	5,421	982	6,428	4,397	5,141	22,369

The average daily gain was 11 sec.-ft. greater than in 1942.

Gain in Henrys Fork and Teton River, St. Anthony to Rexburg stations, 1943

(St. Anthony dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
St. Anthony	120,880	106,090	51,839	36,677	48,680	364,166
Teton River	54,970	69,420	52,010	28,607	20,537	225,544
Total Supply	175,850	175,510	103,849	65,284	69,217	589,710
H.Fk. diversions	26,328	25,215	22,655	22,285	14,222	110,705
Teton diversions	17,632	28,581	30,896	23,916	15,640	116,665
Rexburg	136,330	136,340	70,965	38,072	55,850	438,057
Tot. acct. for	180,290	190,636	124,516	84,273	85,712	665,427
Tot. gain s.f.	4,440	15,126	20,667	18,989	16,495	75,717
Mean gain s.f.	143	504	667	612	550	495
Tot. gain ac.-ft.	8,807	30,002	40,992	37,664	32,718	150,183

The gain was greater each month than during the previous year, the increased gain for the season amounting to about 45,000 acre-feet. The floodwaters from the foothills and Moody Creek, a tributary to Teton River below the St. Anthony gaging station, spread over a considerable area during the preceding winter and early spring of 1943 and contributed a substantial amount of water to the ground water basin in this section.

TETON BASIN

Mr. Oleen Dummer served as Deputy Watermaster in Teton Basin until August 14 and was succeeded by Mr. Ival Goslin who handled the water distribution in that region until September 1, by which date the demand for water had decreased so that the local users were able to supply their remaining needs without controversy among themselves.

Storage rented during 1943 by Teton Basin users amounted to 1,649 acre-ft., reservoir measurement, as follows:

Trail Creek Irrig. Co.	1,144	acre-ft.
String Canal Co.	325	" "
South Leigh Creek	180	" "
Total	1,649	" "

The amount of storage rented in Teton basin was much less than usual due to the late date of beginning storage use and to the fact that rights of 1894 and earlier priority, amounting to over 350 second-feet in Teton basin, were never cut in 1943 whereas in all other years during the past decade all natural flow rights in Teton basin were cut off to supply prior rights on the lower Teton river.

Storage rentals were all delivered to prior Snake River rights from Island Park Reservoir where the water was rented at 30¢ per acre-ft. from the Fremont-Madison Irrigation District. At a meeting held in Rexburg during the summer of 1943 the lower users in Teton River agreed that the practice of diverting 1-3/4 acre-ft. of stored water in Teton Basin for each acre-ft. of water rented in the Island Park Reservoir could continue during the 1943 season, pending measurements and study by the State Department of Reclamation, to be followed by further negotiations and a permanent agreement, if possible, between the upper and lower users on Teton River.

A report was made by the State Reclamation Engineer on this matter dated September 30, 1943, as follows:

Boise, September 30, 1943

Mr. F. C. Gillette, Secretary,
Trail Creek Irrigation Co. and String Canal Co.
Victor, Idaho
and
Mr. F. L. Davis, Secretary,
Lower Teton Water Users
Rexburg, Idaho

Gentlemen:

Pursuant to your requests, an investigation was made on August 6 to 9 inclusive, by a representative of this office, and it was determined that the water transportation loss on Trail Creek to its mouth was 33.26%, and that there was no loss on the Teton River from the mouth of Trail Creek to the Tetonia U. S. G. S. gaging station.

The enclosed report shows that by using a mean percentage of the loss determined at this time and during previous years on Trail Creek, the result is 32.83%; and that the mean percentage of loss determined at this time on Teton River, averaged with measurements taken in the dry year of 1934, is 21%.

If an average of losses were made based on all water measurements of record, the mean percentage on the reach of the stream, including Trail Creek and the Teton River to the Tetonia U. S. G. S. gaging station, is 46.93%.

From the investigations and measurements that have been made on Trail Creek this year and previous years, it is indicated that the average percentage of loss is more or less constant, irrespective of whether it is a good or poor irrigation season. On the other hand, however, the average loss on the Teton River from the mouth of Trail Creek to the Tetonia U. S. G. S. gaging station varies from 42% in a dry season like 1934 to no loss in a good water year like 1943.

It was desirable to have had more measurements taken this year, but on account of the need for irrigation water in the upper valley for the maturing of crops, the water users were not in favor of closing their gates for two days so a test run could be made.

In regard to a fair basis for exchange of storage water from the Island Park Reservoir for irrigation water diverted and used in the upper Teton Valley, this office takes this position: In order to base an opinion on a close determination of transportation losses from the upper to the lower valley of the Teton River, it would entail considerable field work and hydrographic study covering a period of two or more years.

Since it apparently is the desire of all parties concerned and affected with the exchange of this storage water from Island Park Reservoir to have the opinion of this office in regard to the matter at an early date, therefore this opinion can only be based on the information available.

It is the opinion of this office that an exchange of water between the water users of the Upper Teton River with the Lower Teton water users be on the net basis of 1-3/4 acre feet being diverted by the upper users to every acre foot of storage water purchased or rented in the Island Park Reservoir for use by the lower water users.

Very truly yours,

JAMES SPOFFORD
State Reclamation Engineer.

TETON RIVER INVESTIGATIONS AND RECOMMENDATIONS

To: Mr. F. C. Gillette, Secretary,
Trail Creek Irrigation Corporation
and String Creek Canal Co.

Mr. F. L. Davis, Secretary,
Water Users of Lower Teton River

In outlining this report, for explanation purposes, the following letters and resolutions are hereby quoted:

"WHEREAS, The land owners and water users of the Trail Creek Irrigation Corporation and the String Canal Corporation farming and irrigating some seventy-five hundred acres of land in Teton County, Idaho, and

"WHEREAS, Said lands are dependent upon the natural flow of water from Moose, Gama, and Trail Creeks in Teton County, Idaho, and

"WHEREAS, Water rights in Teton County are subject to earlier rights on the Lower Teton River, and

"WHEREAS, It is necessary for the Trail Creek and String Canal Companies to secure storage water to replace the natural flow when it can be called down stream by prior rights, and

WHEREAS, The Trail Creek and String Canal Companies have been diverting by agreement with the lower water users one and three-fourths (1-3/4) acre feet for each one acre foot purchased, and

"WHEREAS, The Trail Creek and String Canal Water users feel a more equitable diversion should be allowed them due to an early appreciable return flow into Teton River, and

"WHEREAS, Negotiations are now under way to secure storage space in the Island Park Reservoir, and

"WHEREAS, A preliminary survey has been made by the Soil Conservation Service showing material benefit from return flow to lower valley water users, and

"WHEREAS, It is deemed desirable to make further survey before arriving at a definite conclusion,

"NOW THEREFORE, be it resolved by the Trail Creek Irrigation Company and the String Canal Company that the Department of Reclamation for the State of Idaho and the United States Department of Reclamation cooperatively take immediate steps to make such further study and tests securing any and all data necessary to enable them to make intelligent recommendations to the upper and lower Teton River water users regarding the proper basis of purchase and diversion of said waters used by said Trail Creek and String Canal Companies.

"BE IT FURTHER RESOLVED, That the water users of said Trail Creek and String Canal Companies hereby agree to accept the decision arrived at by the State and Federal Reclamation Departments as a basis upon which permanent storage rights shall be fixed in the Island Park Reservoir.

"BE IT STILL FURTHER RESOLVED, That copies of this resolution be spread upon the minutes of the Trail Creek Irrigation Corporation and the String Canal Company, and that copies be sent to James Spofford, Commissioner of Reclamation at Boise, Idaho, John S. Moore and S. O. Harper, Denver, Colorado, and the Fremont-Madison Irrigation District, St.Anthony, Idaho.

TRAIL CREEK IRRIGATION CORPORATION
By N. G. Daniels, President
STRING CANAL COMPANY
By Geo. Hunt, President

Attest:
F. C. Gillette
Secretary

Dated at Victor, Idaho - April 5, 1943.

"Mr. Lynn Crandall
Watermaster District No. 36
Idaho Falls, Idaho

Dear Sir:

"At a meeting held in the Madison County Court House this 28th day of May, A. D. 1943, there being present officers and directors of the following Canal Companies: Fremont-Madison Irrigation District, Siddoway Irrigation and Manufacturing Company, Teton Irrigation and Mfg. Co., Wilford Irrigation Company, Woodmansee-Johnson, Rexburg City Ditch Co., Teton Island Feeder Canal Company, Island Ward Canal Company, Consolidated Farmers' Canal Co., Salem Irrigation Canal Company. At this meeting the following resolution was unanimously adopted:

"WHEREAS, We, the officers and directors of the above mentioned Canal Companies, having just been informed of a resolution adopted by the Trail Creek Irrigation Corporation and the String Creek Canal Corporation, wherein it is stated "The Trail Creek and String Canal Companies have been

diverting by agreement with the lower water users, one and three-fourths (1 3/4) acre feet for each acre foot purchased', and

"WHEREAS, We the Water Users of the Lower Teton River, have never by agreement given our consent to any one at any time for such diversion.

"NOW, THEREFORE, We, the Water Users of the Lower Teton River do hereby protest of any such diversion of our decreed water to the above mentioned two canals or to any other parties whatsoever, on the above mentioned basis or any other basis, unless our consent has been first obtained in writing.

"We further demand that our decreed water be not diverted, distributed or in any way transferred to others without our written consent having first been obtained.

"That a copy of this resolution be spread upon the minutes of the several Canal Companies, and a copy be sent to the following: Mr. Lynn Crandall, Watermaster Dist. No. 36, at Idaho Falls, Idaho; Hon. James Spofford, Commissioner of Reclamation, at Boise, Idaho; Department of Reclamation at Denver, Colo.; and to F. C. Gillette, Secretary of Trail Creek and String Canal Companies."

Yours very truly,

W. L. DAVIS, Secretary
Rexburg, Idaho

Dated at Rexburg, Idaho - May 28, 1943

"Honorable James Spofford
Commissioner of Reclamation
Boise, Idaho

Dear Sir:

"As explained to you when you were here, we held our meeting last evening and the water users of the Lower Teton River desire that a survey of the Teton River be made by your department for the purpose of arriving at a fair basis for the exchange of water on the Teton River and tributaries.

"They would appreciate this being done at the earliest possible date and that the survey would be of no avail unless the water was turned down the river for a period sufficient to allow measurements to be made.

"Kindly let me know when this work will be started and if there is anything we can do to assist."

F. L. DAVIS

Dated at Rexburg, Idaho - July 22, 1943

The U. S. Bureau of Reclamation was requested, by resolution of the water users, to cooperate with the State Department of Reclamation in the findings of this investigation; however, it was stated by J. S. Moore of

the Bureau "That a solution of these problems bears no direct relationship to the arrangements that may be made to secure storage capacity for the benefit of lands in Teton Basin".

In view of the foregoing statement, the State Department of Reclamation acted independently, and proceeded with an investigation, and hereby makes the following report:

The water users of the Teton Basin wish to supplement their water supply by the purchase of storage water, thereby exchanging natural flow water, which after the flood water season belongs to the Lower Teton River users, by decree, for storage waters which can be delivered to lower users through the Henry's Fork and Cross Cut Canal from the Island Park Reservoir.

This exchange of water has been carried on for the past several years, upon a basis of the upper users delivering to the lower users fifty per cent of the former's diversions in Teton Basin, allowing for loss in Henry's Fork and Cross Cut Canal on the rented stored water, which permits the Teton Basin or upper users to divert one and three-fourths (1 3/4) acre feet for each acre foot of storage water rented or purchased in said Island Park Reservoir. Thus for every 100 acre feet of storage water purchased in the reservoir, after deduction of carriage losses in Henry's Fork and Cross Cut Canal are considered, 87.5 acre feet of storage water would be delivered to lower Teton water users in exchange for 175 acre feet of natural flow rights diverted by the Upper water users. This exchange basis being set up on the percentage of carriage loss on the various creeks and Teton River between the diversions of the upper and lower users, based upon the amount of water which it was necessary to turn down to the lower users to satisfy prior rights as decreed.

A study of the area under consideration disclosed that apparently eighty (80) per cent of the proposed storage water purchased will be used by water users under the Trail Creek drainage; Therefore, for this and other practical reasons, the waters of Trail Creek was the only creek used in making a test run of water measurements to determine carriage losses on released water in Trail Creek and Teton River. Immediately prior to this investigation, Trail Creek waters were being all diverted above and adjacent to the town of Victor, leaving the lower sections of the creek channel practically dry prior to the test run.

On the morning of August 5th, by agreement with all water users, Roy W. Thompson, assistant in the Department of Reclamation, assisted by Oleen Dummer, Deputy Watermaster on Upper Teton River, closed all diversions on Trail Creek, as nearly as possible, diverting all the flow down Trail Creek channel into the Teton River, for the purpose of checking and determining carriage losses in Trail Creek channel and the Teton River as far as Tetonia U.S.G.S. measuring station, located at the head of the canyon at the lower end of Teton Basin.

Prior to closing the diversions on Trail Creek, the waters of Teton River were measured at Tetonia Station, and the automatic water recorder checked and recorded for future use.

Beginning on the morning of August 6th, Mr. Thompson, accompanied by Mr. Dummer as assistant, measured the flow of Trail Creek above all diversions, measuring all inflow and outflow on Trail Creek to a point where rising water commenced to flow, which point was established as being the mouth of Trail Creek, there water was again measured, as being the flow into Teton River.

Upon special request, the creek was divided into three sections. The following tabulation shows the loss in each section, and the total transit loss on Trail Creek.

"Report showing transit loss in water of Trail Creek
Measurements taken on August 6, 1943, with all diversions closed except leakage

Loss by Sections		Computation in Second Feet
Section 1		
Supply - Trail Creek above String Canal		121.9
Game Creek at Highway		38.1
Total supply above all diversions		160.0
Diversions - String Canal	1.08	
Kimball "	1.12	
Town "	6.26	
Ricks "	.98	
Brissler "	3.00	
Edwards "	.10	
Spencer "	3.36	
Humble "	1.24	
Tonks "	2.12	
McBride "	.80	
Total diversions in section	20.06	
Trail Creek below Tonks Canal	126.54	
Total accounted for in section		146.60
Total loss in section		13.40
Per cent loss in section	8.38%	
Section 2		
Supply below Tonks Canal		126.54
Diversions in section	.80	
Trail Creek below Porter Ditch	114.23	
Total accounted for in section		115.03
Transit loss in section		11.51
Percent loss in section	9.1%	

Loss by Sections

Section 3		Computation in second-feet
Supply below Porter Ditch		114.23
Diversions in section	.40	
Trail Creek at live water	85.53	
Total accounted for in section		85.93
Transit loss in section		28.30
Per cent loss in section	24.77%	

NOTE- Section 3: The Trail Creek channel in Section 3 was in poor condition for making a test run, it being completely filled up with drift at one point, causing the water to overflow and spread before returning to the channel below, flooding approximately one acre. The balance of the channel was filled with a heavy growth of young willows and other vegetation.

TOTAL TRANSIT LOSS

Total supply above diversions		160.00
Total diversions	21.26	
Amount reaching live water	85.53	
Total accounted for		106.79
Total Transit loss		53.21
Per cent loss	33.26%	

In determining the loss on additional river flow in Teton River from live water at the lower end of Trail Creek to the Tetonia gaging station during the test run, it was necessary to compute the daily average decrease of stream flow, as the test was taken during the falling stage of the river, and the increase in flow caused by precipitation during the testing period.

Precipitation records received from the Tetonia U. S. Weather Bureau recording station gave the precipitation as follows: August 1, 0.06 inch; August 2, 0.40 inch; August 4, 0.14 inch; August 6, 0.05 inch; and August 7, 0.06 inch.

The following information and effect of precipitation to the river flow at Tetonia U. S. G. S. gaging station, as given by Mr. Crandall, Watermaster in Water District No. 36, is as follows:

July 7, 1942 - 0.12 inch precipitation raised the river 30 sec.-ft.
July 15, 1942 - 0.43 inch precipitation raised the river 77 sec.-ft.
August 29, 1942 - 0.08 inch precipitation raised the river 15 second feet.
September 11 and 13, 1942 - 1.03 inches of precipitation raised the river 101 second feet.

On August 1, 1943, the precipitation was 0.06 inch, and on August 2 the precipitation was 0.40 inch. The precipitation during these two days raised the river approximately 105 24-hour second feet.

On August 6 and 7, 1943, the precipitation at the same station was given as 0.05 and 0.06 inches, making an accumulation of 0.11 inches of rainfall during the time the test run was being made. This precipitation, plus the Trail Creek water turned into Teton River - 171 24-hour second feet - raised the river at this gaging station to 235 24-hour second feet.

Allowing for heavier rainfall in the upper end of the basin than that recorded at Tetonia U. S. G. S. gaging station, it still leaves the carriage loss on the Trail Creek water, from rising water on Trail Creek to the gaging station practically nil.

It is logical to assume that under the conditions of heavy groundwater inflow existing in 1943, the carriage loss through this section of the river would be practically nil, due to the fact that the increased head was only twelve per cent of the total river flow at Tetonia measuring station, and also to the extreme seeped condition or high water table of the swamp area through which the river flows.

No measurements were taken to determine river losses on Teton River between Tetonia U. S. G. S. gaging station and the first diversion on the lower Teton River. It was the opinion of Mr. Crandall that there was very little loss to the flow through this section of the river, and that it would be very difficult to check this section of the river for determination of losses.

The following is a list of Trail Creek and Teton River carriage losses taken at previous times under the supervision of Mr. Crandall in Water District No. 36:

Losses in Trail Creek

Date	Total Flow (Sec. Ft.)	Loss (Sec. Ft.)	Loss (Percentage)
May 2, 1934	94.4	45.1	48 %
May 18	176.9	51.5	29 %

(State Department of Reclamation)

It will be noted that several test runs were made showing Trail Creek losses during the year 1934, which was one of the dryest years of record; however, only one test was made during 1943. It must be stated that the season of 1943 was an abnormal year in Teton Basin relative to water supply. Surface and ground water conditions were above normal throughout the season, and it was considered one of the best water years of record. All valid rights on lower Teton River in 1943 were filled by inflow below the Teton Basin diversions, so the lower rights were unaffected by Teton Basin diversions in 1943. Water spilled throughout the 1943 season past the lowest diversion on Teton River into Henry's Fork with no diversion through the Cross Cut Canal into Teton River.

The average or mean per cent of loss on Trail Creek water during the year of 1934, taken from the Crandall report, was 32.4 per cent, while the loss as shown by the one test run in 1943 shows 33.26 per cent loss; leaving a mean percentage of loss for the two abnormal water years of 32.83 per cent.

The average loss in Teton River from additional water turned down from Trail Creek, from the mouth of Trail Creek to the Tetonia U.S.G.S. gaging station, taken from Mr. Crandall's report for the year 1934, was 42 per cent; while according to the 1943 test run, the same section of river showed no loss whatsoever. Again taking the mean or average percentage of loss for the two years, 1934 and 1943, would give a 21 per cent loss for the river section.

On the above percentage basis of losses, assuming 100 second feet of water was turned down Trail Creek for delivery to water users below, 32.83 per cent would be lost in transit in Trail Creek, leaving 67.17 second feet delivered at the mouth of Trail Creek. Of this 67.17 second feet turned down Teton River, 21 per cent would be lost in transit between the mouth of Trail Creek and the Tetonia U.S.G.S. gaging station, leaving a total of 53.07 second feet delivered at said gaging station. The total transit loss from Upper Trail Creek to the Tetonia U.S.G.S. gaging station would be 46.93 second feet, which would be a total loss of 46.93 second feet or 46.93 per cent loss.

Respectfully submitted,

Dated Sept. 30, 1943 - STATE DEPARTMENT OF RECLAMATION

By (Signed) James Spofford
State Reclamation Engineer

Regulation on Teton Creek under the terms of the Wyoming Federal Court decree was made jointly by O. A. Dummer (until Aug. 15) and Ival Goslin for Idaho and Ross T. Wilson for Wyoming, as follows:

Teton Creek Regulation 1943

Canals	8/10/43		8/17/43	
	Before Regul.	After Regul.	Before Regul.	After Regul.
Waddell	6.5	6.5	4.1	4.1

Grand Teton	29.4	40.0	20.0	27.0
Totals (sec.-ft.)	80.5	79.9	54.3	53.6

After September 1, Mr. Claude Dalley, watermaster on the Grand Teton Canal, was appointed as Deputy Watermaster of District 36 to represent the Idaho rights in distributing the waters of Teton Creek for the balance of the 1943 season, but no specific records were kept after September 1st.

The discharge of streams and canals on which a number of measurements were made is shown on Plate 23. The results of various other miscellaneous measurements are as follows:

Discharge in Sec.-ft. of

Trail Creek at old weir in Job Porter's pasture		
Loss in Section	0.33	"
	1.63	"

DISTRIBUTION IN SWAN VALLEY SECTION

Mr. F. S. Thomas again served as Deputy Watermaster. Owing to the improved water supply many of the rights that are usually cut off each year remained in force throughout the 1943 season and as a consequence the local users only found it necessary to rent 230 acre-ft. of storage. This was delivered on the same 2 for 1 basis used in the past.

The total precipitation for the year ending September 30, 1943 was 4% above normal as an average at the nine measuring stations. The average precipitation from November to February, inclusive, was 66% in excess of normal, but was deficient during the remainder of the year. During these four winter months deep snows piled up in the mountains and caused heavy runoff during the following spring and summer in spite of deficient precipitation occurring at that time.
