INTRODUCTION

The annual meeting of Water District No. 36 was held at Idaho Falls on March 3, 1952. Lynn Crandall was re-elected as watermaster and the following were elected as members of the Committee of Nine:

H. L. Crawford, N. V. Sharp, C. H. Welteroth, Ival Goslin, A. K. Van Orden, Geo. D. Hansen, Leonard Graham, Alex Coleman and R. W. Walker.

Advisory members: James Spofford representing Bureau of Reclamation and James Kunz representing Teton Basin.

A. K. Van Orden, member of the Committee, died October 8, 1952.

Principal resolutions adopted at the annual meeting included the following:

1. Fixed stored water transmission losses as follows: 2½% Moran to Heise, 4.4% Heise to Lorenzo, 0.5% Lorenzo to Woodville, 6% Woodville to Blackfoot, 4% Henrys Lake to Island Park, 2% Island Park to Warm River, 0.5% Warm River to Ashton.

2. Adopted a budget of $41,440.00 to cover expenses of operating the district during the ensuing year, of which it was estimated that $12,000 would be paid from Federal and State funds.

3. Opposed the plan to build the Hells Canyon project as proposed in U. S. Congress H. R. 5743.

In June 1952 a proposal to the State Land Board was made by S. K. Atkinson seeking to dredge Snake river for its mineral content between Firth and American Falls reservoir backwater. This proposal was actively opposed by the Snake River waterusers and was withdrawn by Mr. Atkinson until such time as he could secure more complete information on mineral values in the area.

The South Fork Reservoir Committee held many meetings during the year with representatives of the U. S. Bureau of Reclamation

ironing out differences of viewpoint in connection with the Palisades repayment contracts. Agreement on these various matters was finally secured and it appears likely that signing of the contracts will be completed before the beginning of the 1953 irrigation season. Construction of the Palisades dam itself began during the year and was carried forward by the contractor on schedule under favorable weather and working conditions.

An ample supply of water was available for use during the irrigation season, altho deficient precipitation after July 1 resulted in a heavier draft on stored water than has occurred during the past several years. At the close of the irrigation season on September 30 the reservoirs held 1,094,070 acre-feet which is 38% of their capacity and 78% of the average holdover during the past 10 years.

Water spilled to waste past Milner in excess of Idaho Power Company rights during the year ending September 30, 1952, amounted to 3,530,000 acre-feet, compared to 3,150,000 acre-feet during the preceding year.

Stored water deliveries in 1952 began on July 5 and continued until September 30 when the gates at Jackson Lake were closed to begin storage for 1953. The deepest cut into natural flow rights occurred September 9-11, 22-23 when 25% of December 14, 1891 rights were being filled. Ground water holdover from 1951 in the headwater areas was doubtless a contributing factor in maintaining natural flow at higher levels during 1952 than would otherwise have been the case.

Ground water pumping developments in the Snake River Valley above Milner have been a matter of increasing concern to District

No. 36 waterusers for several years past due to possible reduction in ground water inflow to the River that might result therefrom. This has been especially true in the area surrounding American Falls reservoir where upwards of 2,500 second-feet enters the river as ground water inflow. At a meeting of the Committee of Nine held at Burley on April 16, 1952, an agreement was entered into with the Ground Water Division of the Geological Survey for a continuing program of systematic collection and study of records of ground water levels and flows in the American Falls basin. The agreement provided for an annual expenditure of $3,000 on this work of which one-half would be paid by the Geological Survey and one-half by Water District No. 36. The $1500 paid by District No. 36 would be charged on the annual watermaster bill 60% to American Falls reservoir to be charged to storage owners in proportion to ownership of space and 40% to natural flow rights apportioned as follows:

Twin Falls Canal Company	72%
North Side Canal Company	15
Minidoka Irrigation District	6
Burley Irrigation District	4
Gooding Project	2.5
Milner Low Lift	0.5

The percentage apportionment was based on a study of the effect that a shortage in ground water inflow to American Falls reservoir would have had on the various rights during the five year period from 1931 to 1935 when the reservoir failed to fill.

An agreement was reached with the Bureau of Reclamation whereby that Bureau would construct a half-dozen new gaging stations on tributaries to Palisades Reservoir, which will then be operated by the Watermaster's office. Some work along this line was accomplished in the fall of 1952 and all the stations should be completed by the fall

of 1953. The gaging station on Henrys Fork at Warm River was discontinued September 30, 1952, as a partial offset against the new Palisades stations, so as to avoid any necessity for hiring more personnel.

PERSONNEL

The persons engaged in water distribution during 1952 were as follows:

Lynn Crandall	Watermaster and Deputy Com. of Reclamation
Henry C. Eagle	Hydr. Engineer and Deputy Watermaster
Melvin Luke	Deputy Watermaster and Hydrographer at St. Anthony
Oleen Dummer	Hydrographer
A. H. Bush	Hydrographer
Charlotte M. Elg	Clerk
C. Drue Cooper	Deputy Watermaster & Hydrographer, Teton Basin
Seth Hansen	Deputy Watermaster, Teton Basin
Don Riggs	Deputy Watermaster, Henrys Fork
S. B. Garrett	Deputy Watermaster, Henrys Fork
Joe Bohi	Deputy Watermaster, Lower Teton River
Elmer Lenz	Deputy Watermaster, Upper Fall River
D. R. Anthony	Deputy Watermaster, Heise Division
H. M. Bramwell	Deputy Watermaster, Rigby Division
D. W. Dick	Deputy Watermaster, Idaho Falls Division
Carl J. Anderson	Deputy Watermaster, Blackfoot Division
R. H. Seymour	Deputy Watermaster and Hydrographer, Milner Dam
F. S. Thomas	Deputy Watermaster, Swan Valley Division
James Spofford	Supt. Minidoka Project, Bureau of Reclamation
A. W. Heath	Supt. Am. Falls Res., Bureau of Reclamation
James L. Braman	Supt. Jackson Lake, Bureau of Reclamation
S. Geo. Pilcher	Supt. Island Park Res., Bureau of Reclamation
J. J. Taylor	Supt. Grassy Lake, Bureau of Reclamation

Gage Readers: Foster B. Randall, P. S. Jones, Mrs. Irvin Siepert, James Fugal, D. R. Anthony, J. T. Hobbs, Jos. H. Bahr, Jr., T. E. Culley, Wm. Hall, J. B. Rennoux, B. Priscock, Earl D. Sears, Gordon A. Smith, A. C. McLane.

SNOW SURVEYS

The results of snow surveys for the past ten years are shown in the following tabulations. The figures for earlier years are shown in previous annual reports of the District.

Depth in Inches (S = Snow, W = Water)

On April 1, 1952 the snow (water content) averaged about the following percentages of normal on different parts of the watershed: Jackson Lake drainage 124%, tributaries Moran to Heise 126%, Island Park 181%, Fall River 134%, Teton River 122%. Due to subsequent deficiency in precipitation the runoff for the year ending September 30, 1952 was somewhat less than these figures, being the following percentages of normal at various gaging stations: Moran 118%, Heise 112%, Island Park 127%, Fall River 120%, Teton River 116%. The runoff would have been still lower except for draft by the streams on ground water stored on the watershed from recent past years of above normal water supply.

1952 REGULATION SCHEDULE

" 24	Filled 50% Dec. 14, 1891 right
" 30	Discontinued regulation and requested canals to reduce diversions so that all canals could get some water.

In most years it is necessary to cut rights on Henrys Fork for short periods to earlier priorities than on the main Snake River. In 1952, however, due mostly to the heavy snowfall in Island Park, the local stream flow held up better than usual, so that the foregoing regulation schedule was also in effect on Henrys Fork and tributaries thruout the season.

Storage drafts on the various reservoirs started on the following dates: American Falls July 4, Jackson Lake July 4, Island Park July 8, Henrys Lake July 14, Grassy Lake, July 27.

The draft from Grassy Lake was for the purpose of drawing the lake level down to a point which the Bureau of Reclamation deemed desirable to carry into the winter. The flow of Fall River plus diversion by Cross Cut Canal from Henrys Fork was more than sufficient to meet all irrigation demands on Fall River without requiring storage releases from Grassy Lake. The Cross Cut Canal carried water to Teton River for only four days, July 11-14, in 1952, altho it supplied water to the middle and north branches of the Fall River Canal from July 10 to September 10.

WATER SUPPLY

Run-off at various gaging stations during the year ending September 30, 1952, was as follows:

Station	1952 run-off (acre-feet)	Average run-off past years (acre-feet)	Years of record	1952 % of Average
Snake River at Moran	1,222,000	1,040,000	49	118
Snake River at Heise	5,695,000	5,087,000	49	112
Snake River at Neeley	6,946,000	5,722,000	56	121
Fall River near Squirrel	654,900	546,600	39	120
Teton River near St. Anthony	643,200	555,200	25	116
Henrys Fork at Warm River	919,500	726,400	38	127
Henrys Fork near Rexburg	1,889,000	1,416,000	44	133

The run-off at Moran and Heise has been corrected for Jackson Lake holdovers; at Neeley for American Falls holdovers; at Warm River for Henrys Lake and Island Park holdovers; at Rexburg for Henrys Lake, Island Park and Grassy Lake holdovers; at Squirrel for Grassy Lake holdovers; and at St. Anthony for discharge from Cross Cut Canal into Teton River.

By April 25 the level of Jackson Lake had been lowered so that 54% of the reservoir capacity was available for flood control storage. As a result the maximum flow at the Moran station during the snow melting floodwater period was only 5,460 second-feet on June 15. Except for floodwater storage of about 8,000 second-feet in Jackson

Lake the peak flow would have been about 10,000 second-feet on June 5. The maximum flow at Moran in 1952 occurred on July 10, amounting to 7,440 second-feet released to meet heavy irrigation demands in the section from Idaho Falls to Blackfoot.

The peak flow at the Heise station in 1952 was 26,500 second-feet on June 9, with about 4,500 second-feet being stored in Jackson Lake at the time. No significant floodwater damage in the Heise-Roberts area was reported from this discharge.

The maximum flow of Snake River near Blackfoot occurred May 7, amounting to 28,300 second-feet. This peak was 5,000 second-feet greater than the 1951 peak due to it coming at an earlier date when Henrys Fork was at peak floodwater levels and before upstream canals were diverting water for irrigation. Some flooding of adjacent land occurred in the vicinity of the Blackfoot bridge, but this may have been caused in part by the action of a downstream landowner who had dammed off one of the high water channels of the river in connection with a land leveling project.

Flood water flows below American Falls were not of significant magnitude, the peak flow passing Milner dam being 14,300 second-feet on May 10.

The following tabulation shows how the actual run-off at various stations compared with forecasts by Government agencies from precipitation and snow survey records:

Comparison of Run-off estimates by U. S. Weather Bureau
Year ending September 30, 1952. Thousands of acre-feet.
Based on precipitation at Weather Bureau Stations

Station	Mar. 1 estimate	Apr. 1 estimate	Actual run-off	% variation from actual run-off: Mar. 1 estimate	% variation from actual run-off: April 1 estimate
Snake - Moran	1,070	1,080	1,222	-12	-12
Heise	5,390	5,490	6,036	-11	- 9
Shelley	4,710	4,830	5,598	-16	-14

Teton R. -					
St.Anthony	614	611	643	-15	-15

Estimates by Soil Conservation Service for period
April thru September 1952. Based on Snow Surveys

Snake - Moran	950	993		- 4
Heise	4,500	4,619		- 2
Henrys Fork -				
Rexburg	1,200	1,123		+ 7
Teton - St.Anthony	470	468		0
Blackfoot -				
Blackfoot	80	89		-10
Portneuf -				
Pocatello	150	127		+18

For period April thru July 1952

Snake - Blackfoot	3,150	2,841	+10

The spill past Milner in excess of Idaho Power Company rights during the year ending September 30, 1952, was 3,530,000 acre-feet, second greatest since American Falls reservoir was built. The magnitude of the 1952 spill was to a considerable extent due to the large reservoir holdovers in the fall of 1951, which left less space than usual in the reservoirs to hold the 1952 run-off.

Reservoir holdovers on September 30 during each of the past ten years are shown in the following tabulation:

Holdovers on Sept. 30 in acre-feet

Year	Jackson Lake	American Falls	Lake Walcott	Henrys Lake	Island Park	Grassy Lake	Total
1943	650,340	897,050	42,710	76,200	84,050	14,750	1,765,100
1944	300,570	534,450	78,020	55,900	51,900	6,420	1,027,260
1945	568,030	924,820	91,460	64,200	56,780	13,400	1,718,690
1946	402,740	718,970	83,770	62,700	51,460	12,110	1,331,750
1947	463,990	686,770	94,950	55,600	75,520	13,220	1,390,050
1948	234,260	664,720	88,550	53,300	33,230	12,130	1,086,190
1949	273,140	535,030	95,310	52,060	29,060	11,930	996,530
1950	570,390	925,620	93,200	69,100	87,660	12,170	1,758,140
1951	622,680	1,021,300	94,020	71,400	86,180	12,130	1,907,710
1952	281,730	583,000	91,920	62,700	62,520	12,200	1,094,070
Average	436,800	749,200	85,390	62,320	61,840	12,050	1,407,600

The combined capacity of these reservoirs when full is 2,872,000 acre-feet. The 1952 total holdover was about 38% of capacity.

TRANSFERS AND CHANGES IN POINT OF DIVERSION

Transfer No. 785 was issued January 9, 1952 by the State Reclamation Engineer authorizing John T. Moulton of Victor to transfer 0.04 second-foot of the waters of Little Warm Creek with April 1, 1896 priority for domestic use.

LITIGATION

In a summary decree suit against the Watermaster in the Fremont County District Court, Arvie Weeks was awarded 1.0 second-foot and Francis Stoltenberg was awarded 2.4 second-feet both of January 22, 1916 priority from Rainey Creek. These are floodwater rights in addition to rights of similar amount of early priority awarded in the Rexburg decree.

In a similar suit the Owners Mutual Irrigation Company was awarded a decree for 2.5 second-feet of May 15, 1921 priority and

3.5 second-feet of May 23, 1934 priority from Market Lake Springs, which water is conveyed thru a constructed ditch to Snake River and carried down the channel of that stream for a distance of about ten miles to the head of the Kennedy ditch thru which it is diverted to the lands served by the Owners Mutual Irrigation Company. Except for the diversion of this water into Snake River it would otherwise escape westward underground beneath Market Lake and the Snake River plains. The Company is credited with the amount of water actually delivered to Snake River. The water has been used in this manner for many years by rights acquired under State Licenses 14,161 and 18,002 but had not previously been decreed.

In another summary suit against the Watermaster in the Fremont County District Court, Hal and LeIsle Rasmussen were awarded 1.6 second-feet of May 15, 1896 priority from Fox Creek to be diverted thru the Wanless Canal.

COMMUNITY LATERAL MANAGERS

In accordance with the provisions of the Idaho statutes the following appointments were made for the 1952 irrigation season:

Manager	Name of Lateral
Wayne Poole	Johnson, Lott, Poole and Anderson Lateral near Menan
H. M. Bramwell and Truman Bowcutt	Lowder, McPherson and O'Neill Lateral from East Labelle Canal
Noble Barrus	Augustine Laterals from Riverside and Danskin Canals
Melvin Chaffin	High Line Lateral from Peoples Canal.

CANAL DELIVERIES

Daily diversions by upper valley canals from Snake River during the 1952 irrigation season are shown on Plates 6-10 inclusive. Diversions thruout the year by canals below American Falls are shown

on Plates 35-45. Miscellaneous measurements of the flow of canals and streams in the headwater areas are shown on Plate 24.

Total diversions during the 1952 irrigation season by all waterusers in the District, as tabulated in the annual watermaster's bill, amounted to 7,756,000 acre-feet, which is 276,000 acre-feet greater than in 1951 and is the greatest amount ever diverted in any past season. This was probably largely the result of deficient precipitation in the irrigated valley after July 1, as the increased use was noted under nearly all canals thruout the District.

Diversions during 1952 irrigation season by Snake River Canals (downstream order from Heise)

(May to Sept. incl. for upper valley canals; Apr. 15 to Sept. 30 for lower valley canals)

Total	6,513,138	981,818	6.6

(a) Received additional water from Willow and Sand Creeks
(b) Received additional water from Sand Creek and Blackfoot R.

The total diversions by these main river canals were about 3% greater than in 1951. Of the 3,458,700 acre-feet diverted by lower valley canals 1,287,518 acre-feet or 37.3 percent was stored water. Of the 3,054,438 acre-feet diverted by upper valley main river canals 347,467 acre-feet or 11.4% was stored water.

The following tabulation shows the monthly diversions in various sections of the District during the past ten years:

Diversions in Thousands of Acre-feet
Heise to Blackfoot

Year	May	June	July	Aug.	Sept.	Season

Average	16	73	79	92	86	65	411

The 1952 diversions were above normal every month in all of the above sections except during April for all the lower valley canals and May for the Gooding Canal which was partially supplied from Wood River at that time.

The total seasonal diversions in each section were the greatest ever recorded except under the Gooding Canal that received some water from Wood River in addition to its diversions from Snake River.

RIVER DATA

The daily segregation of stored water and normal flow at the several reservoir outlets and gaging stations was made in accordance with the same methods used during recent years which are described in detail in previous annual reports.

At the gaging station on Snake River near Blackfoot when 1900 priority rights were cut, the natural flow was computed as 190 second-feet plus flow in Blackfoot River, which was believed to be representative of the conditions existing along that section of the river channel in 1952.

Stored water passing the Blackfoot gaging station during the 1952 irrigation season amounted to 146,000 acre-feet. This was partly due to several upper valley storms that reduced water demand resulting in spill until the effect of cuts at Jackson Lake could become effective at Blackfoot. There were also several sections of stream channel in the upper valley where the canal companies were unable to divert the desired amount of water from the river unless a little water was spilling by. These included the north side of Snake River between Heise and Lorenzo and another section between Firth and Blackfoot in the vicinity of the Corbett and Riverside headings. In the latter area the river seems to have cut down several riffles and lowered its grade. Local residents attribute this to dredging material out of the river channel to build a dike under direction of the Army Engineers.

The inflow between Blackfoot and Neeley stations is shown on Plate 11. The flow of the various spring creeks was measured on May 14, 29, June 19, July 4, 31, August 14, September 16, and interpolated for intervening days. Daily discharges were available of the flow of Portneuf River at Pocatello and the Aberdeen-Springfield Canal Company furnished estimates of daily spill thru its wasteways. The unmeasured gain was calculated as 1320 to 1330 second-feet.

STORED WATER DELIVERIES

The contract amounts of water were allotted by the Bureau of Reclamation in American Falls and Jackson Lake reservoirs as follows:

U. S.	0	13,593	0	13,593
Total	1,266,407	433,593	847,000	2,547,000

In accordance with the terms of the present lease the United States retained 13,593 acre-feet of its lease water for rent to non-lease holders as follows:

Upper Valley	12,643 acre-feet
Lower Valley	950 "
Total	13,593 acre-feet

Demand occurred for more water to rent than the above amount available from the United States and upon solicitation by the Watermaster the Twin Falls Canal Company agreed to rent enough of its Jackson Lake water to take care of these additional demands. This amounted to an additional 5,472 acre-feet so rented by that company to various upper valley users. Details of the storage allotments, rentals, etc., are shown on Plate 14. All rentals were for 30¢ per acre-foot, reservoir measurement.

During the year the Owners Mutual Irrigation Company acquired by purchase a permanent right to the water from Market Lake Springs that it had been leasing for some years past. It was credited with 1,350 acre-feet delivered from Market Lake Springs to Snake River during the 1952 regulation period which was diverted thru the Kennedy ditch.

The usual items covering Lake Walcott storage and gain Neeley to Milner during the regulation period were credited to the Minidoka project as tabulated on Plate 14.

The details of Supply and Use of stored water in 1952 are shown in the following tabulation:

Supply and Disposal of Stored Water, 1952
(acre-feet)

Supply

Jackson Lake, July 4	848,250
American Falls, July 4	1,708,000
Lake Walcott, July 4	93,320

(a) Exchanged for American Falls after using 59,269 gain Neeley to Milner and 1,400 draft on Walcott
(b) Includes Hillsdale District
(c) Includes rentals to upper valley users - 5,321 at Jackson Lake, 4,935 at headgate.

MISCELLANEOUS MEASUREMENTS DURING 1952

Measurements made by H. C. Eagle at power plant of Teton Valley Power and Milling Company on Teton River:

Location	Discharge in sec.-ft. Mar. 15, 1951	Sept. 24, 1952
Teton River near Tetonia	221	317
Teton River above power plant	320	420
Gain in section	99	103
Teton River below intake tunnels	-	155
Discharge thru power plant	-	265

September 24, 1952

Average output during measurement	139 amps. @ 2200 volts
Present daily peak load	230 amps. @ 2200 volts

RIVER LOSSES AND GAINS

Losses and gains between river stations are shown by monthly totals in the following tabulations, using time intervals given on Plate 15.

Gain in Snake River, Moran to Heise, 1952
(Heise dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Total
Moran	8,593	100,607	177,840	138,830	97,915	523,785
Heise & Riley	581,375	570,129	390,676	279,792	201,332	2,023,304
Tot. gain s.f.	572,782	469,522	212,836	140,962	103,417	1,499,519
Mean gain s.f.	18,477	15,651	6,866	4,547	3,447	9,801
Tot.gain ac.f.	1,136,096	931,283	422,154	279,594	205,125	2,974,252

The seasonal gain for the five months period was about 81% of the gain during the same months in 1951, being less each month except May.

Gain or Loss in Snake River, Heise to Shelley, 1952
(Heise dates and 24-hr. sec.-ft. except as noted)
- is loss

Station	May	June	July	Aug.	Sept.	Total
Heise & Riley	581,375	570,129	390,676	279,792	201,332	2,023,304
Rexburg	191,200	131,370	52,212	51,280	49,540	475,602
Total Supply	772,575	701,499	442,888	331,072	250,872	2,498,906
Diversions	147,026	227,148	281,886	238,377	191,481	1,085,918

Gain or Loss in Snake River, Heise to Shelley, 1952 (continued)

Station	May	June	July	Aug.	Sept.	Total
Shelley	625,100	503,400	191,060	130,560	95,950	1,546,070
Total Use	772,126	730,548	472,946	368,937	287,431	2,631,988
Tot.diff.s.f.	- 449	29,049	30,058	37,865	36,559	133,082
Mean diff.s.f.	- 14	968	970	1,221	1,219	870
Tot.diff.ac.f.	- 891	57,618	59,619	75,104	72,514	263,964

The gain in this section was about the same as in 1951, reflecting fairly high ground water levels in the area from Lorenzo to Roberts.

Gain or Loss in Snake River, Shelley to Blackfoot, 1952
(Shelley dates and 24-hr. sec.-ft. except as noted)
- is loss

Station	May	June	July	Aug.	Sept.	Total
Shelley	629,100	506,300	196,900	131,310	96,230	1,559,840
Blackfoot R.	15,573	5,711	2,460	2,325	2,573	28,642
Total Supply	644,673	512,011	199,360	133,635	98,803	1,588,482
Diversions	76,213	94,249	112,452	98,955	70,529	452,398
Blackfoot	565,650	416,900	85,960	45,724	35,853	1,150,087
Total Use	641,863	511,149	198,412	144,679	106,382	1,602,485
Tot.diff.s.f.	-2,810	- 862	- 948	11,044	7,579	14,003
Mean diff.s.f.	- 91	- 29	- 31	356	253	92
Tot.diff.ac.f.	-5,574	-1,710	-1,880	21,905	15,032	27,773

A loss occurred during the high water months, with a gain in August and September, probably due to spill back to the river from canals. The gain for the season was about 2/3 of similar gain in 1951.

Gain or Loss in Snake River, Blackfoot to Neeley, 1952
(Neeley dates and 24-hr. sec.-ft. except as noted)
- is loss

Station	May	June	July	Aug.	Sept.	Total
Blackfoot	573,300	417,630	97,295	46,119	34,908	1,169,252

Tot.diff.ac.f.	-50,936	-26,128	-4,834	15,489	11,464	-54,945

A loss occurred during May, June and July when the reservoir was at high level, but continual heavy drawdown caused a substantial gain

during August and September. During the period of storage use July 5 to September 30 there was a net gain of 22,733 acre-feet from bank storage return in excess of evaporation losses. Inasmuch as the downstream canals had plenty of water to meet their demands no attempt was made to allocate this gain to individual canals.

Gain or Loss in Snake River, Neeley to Minidoka, 1952
(Minidoka dates and 24-hr. sec.-ft. except as noted)
- is loss

Station	May	June	July	Aug.	Sept.	Total
Neeley	555,000	491,900	397,100	375,970	259,280	2,079,250
Walcott rel.	-4,657	- 61	0	1,311	943	-2,464
Total Supply	550,343	491,839	397,100	377,281	260,223	2,076,786
Thornton,etal.	100	150	155	132	0	537

Tot.gain ac.f.	17,005	23,137	8,997	17,131	32,345	98,615

The average gain for the season was 325 second-feet compared to 360 second-feet in 1951 and 347 second-feet in 1950. The gain from

Neeley to Milner July 5-September 30, amounting to 59,269 acre-feet was credited to the Minidoka Project as part of its storage supply in accordance with the interpretation of the Foster decree that has been followed for many years past.

DISTRIBUTION ON HENRYS FORK

Melvin Luke, Deputy Watermaster, with offices at St. Anthony, was in charge during 1952 of water distribution on Henrys Fork and tributaries except Teton Basin. The snowfall on the ground in the Island Park region in the spring of 1952 was the greatest in comparison with normal of any region on the Snake River watershed. Not since 1927 has there been as much snow in Island Park as was there at the end of March 1952.

As a result both Henrys Lake and Island Park reservoirs filled and spilled substantial amounts of water prior to the beginning of the regulation period.

Storage drafts began from Island Park Reservoir on July 8, Henrys Lake July 14, and Grassy Lake July 27. The draft on Grassy Lake was made merely to draw down the level of the lake so as to avoid ice damage during the ensuing winter.

The same methods used in the past to segregate stored water and normal flow at the reservoir outlets were continued in 1952. At Island Park this resulted in charging the reservoir with a loss of 30 second-feet for a period of three weeks after storage draft began, and crediting it with the same amount from bank storage return later during the heavy drawdown period.

Water was carried thru the Cross Cut Canal from July 10 to 14 for delivery to Teton River, the supply in Teton River being adequate during

the remainder of the season. Deliveries thru the Cross Cut Canal to lands under the Fall River Canal were continued however, until September 11, when the Cross Cut Canal gates were closed down for the year.

Due to the heavy snowfall on Henrys Fork the water supply was sufficient to fill the same priorities as were in effect on the main Snake River as shown on pages 11 and 12.

Matters relating to regulation in the Island Park region were successfully handled at the time of a trip there July 29, 30, when the various users who did not already own stored water rented enough for their needs during 1952. Details of storage deliveries are shown on Plates 22 and 23.

The 1952 allotments of stored water from Henrys Fork reservoirs were as follows:

Henrys Lake Allotment, 1952

Lake contents, July 14		80,600 acre-feet
deduct dead storage and loss (estimated)		3,000 "
Net available		77,600 acre-feet
	Allotted	
Dewey	1.43%	1,110 acre-feet
Last Chance	13.87	10,763 "
St. Anthony Union	6.8	5,277 "
Salem Union	24.2	18,779 "
Egin	6.8	5,277 "
Independent	26.8	20,797 "
Consolidated Farmers	20.1	15,597 "
	100.0%	77,600 acre-feet

Between July 14 and September 26 the contents of Henrys Lake decreased 17,600 acre-feet. During the same period, there were 16,578 acre-feet of storage delivered past the station at the Lake outlet. The difference between these two figures, or 1,022 acre-feet, represents

loss in Henrys Lake from evaporation and probably some seepage losses also near the Lake outlet.

Fremont-Madison District Allotment
1952

Island Park, July 8	135,205 acre-feet
Grassy Lake, July 27	15,010 "
Sheridan Creek right	1,833 "
Total	152,048 acre-feet

The Sheridan Creek right is a natural flow right of 12 second-feet of 1889 priority acquired in connection with purchase of right of way for the Island Park Reservoir. About the only practical way to make this small right available to all the lands in the Fremont-Madison District is to let it accumulate into an acre-foot total for the regulation period, and thereby be subject to allotment in acre-feet by the District.

The District allotted 124,170 acre-feet of its stored water in 1952 and rented an additional 4,313 acre-feet for a total allocation of 128,483 acre-feet.

The storage balance for the season at the Rexburg gaging station amounted to -11,417 second-feet, which means that the Henrys Fork canals used a total of 11,417 second-feet or 22,645 acre-feet of American Falls storage thru exchange for natural flow. The only American Falls water allotted on Henrys Fork was the Enterprise Irrigation District right of 15,000 acre-feet, equal to 13,910 acre-feet at Rexburg. This indicates that at the close of the 1952 season Island Park Reservoir owed American Falls Reservoir 8,735 acre-feet (Rexburg measurement).

Diversions during 1951 irrigation season from Henrys Fork, Fall River and lower Teton River

Canal	Diversions (acre-feet)	Area Irrigated (acres)	Acre-feet per acre

(a) includes 19,600 acre-feet diverted thru Cross Cut.

1952 diversions on Henrys Fork, Fall R. & lower Teton R. - cont'd

Canal	Diversions (acre-feet)	Area Irrigated (acres)	Acre-feet per acre
Lower Teton Canals - cont'd			
Saurey Sommers	3,560	600	5.9
Gardner	577	200	2.9
Thompson Eames	381	160	2.4
Total lower Teton	246,291	29,750	8.3
Total Henrys Fork, Fall River & Lower Teton R.	960,657	113,645	8.4

(b) Used additional water from Henrys Fork thru Consolidated Farmers.

(c) Used additional water from Moody Creek and Teton Irr. canal waste.

Total diversions by the canals in the preceding tabulation were about 90,000 acre-feet or 10% greater than in 1951. Their stored water diversions were 107,880 acre-feet or 11.2% of the total diversions.

Diversions by some of the larger canals in the headwater areas for the irrigation season May 15 to September 30, 1952, are shown in the following table:

Canal	Diversions (acre-feet)	Irrigated Area (acres)	Acre-feet per acre
String Canal	16,000	2,400	6.7
Trail Creek Irrig.	31,000	5,000	6.2
Fox Creek Canals	12,300	3,800	3.2

Canyon Creek Canal	5,600	2,400	2.3
Conant Creek Canal	4,570	2,000	2.3
Squirrel Creek Canal	1,270	400	3.2

Gain in Henrys Fork Basin, 1952

The following time intervals have been used in preparing the tabulations by river sections:

Lake to Island Park	20 hrs.
Island Park to Warm River	14 "
Warm River to Ashton	5 "
Ashton to St. Anthony	5 "
St. Anthony to Rexburg	12 "
Squirrel to Chester	8 "
Tetonia to St. Anthony	10 "

Gain in Henrys Fork, Lake to Island Park, 1952

(Island Park dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Lake	2,090	3,766	4,675	5,956	3,449	19,936
I. P. release	-28,279	164	14,727	16,186	6,466	9,264
Total supply	-26,189	3,930	19,402	22,142	9,915	29,200
Island Park	34,174	33,434	39,156	38,947	26,366	172,077
Tot.gain s.f.	60,363	29,504	19,754	16,805	16,451	142,877
Mean gain s.f.	1,948	983	637	542	548	934
Tot.gain ac.f.	119,728	58,521	39,182	33,333	32,631	283,395

The gain for the season was 47% greater than in 1951, the result of the heavy 1952 snowfall.

Gain in Henrys Fork, Island Park to Warm River, 1952

(Warm River dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Island Park	33,514	33,737	38,701	39,443	26,547	171,942
Warm River	71,550	52,430	51,660	53,010	38,760	267,410
Tot.gain s.f.	38,036	18,693	12,959	13,567	12,213	95,468
Mean gain s.f.	1,227	623	418	437	407	624
Tot.gain ac.f.	75,443	37,077	25,704	26,910	24,224	189,358

The seasonal gain was 37% greater than in 1951, most of the increase occurring during the snow melting month of May.

Gain in Henrys Fork, Warm River to Ashton, 1952

(Ashton dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Warm River	71,402	52,593	51,539	53,177	38,818	267,529
Ashton	113,270	72,710	68,690	67,340	51,760	373,770
Tot.gain s.f.	41,868	20,117	17,151	14,163	12,942	106,241
Mean gain s.f.	1,351	671	553	457	431	694
Tot.gain ac.f.	83,044	39,901	34,019	28,092	25,670	210,726

The seasonal gain was 40% greater than in 1951 with the greatest proportionate increase occurring in May.

Gain or Loss in Henrys Fork, Ashton to St. Anthony, 1952

(St. Anthony dates and 24-hr. sec.-ft. except as noted)
- is loss

Station	May	June	July	Aug.	Sept.	Season
Ashton	113,190	72,960	68,544	67,559	51,795	374,048
Chester	86,223	59,170	13,559	8,931	8,246	176,129

Tot. gain s.f.	47,484	30,672	12,781	8,362	7,137	106,436
Mean gain s.f.	1,532	1,022	412	270	238	696
Tot.gain ac.f.	94,183	60,837	25,351	16,586	14,156	211,113

The gain was greater during May and June but less from July thru September than a year ago. For the entire period the seasonal gain was 6% greater than in 1951.

Gain in Henrys Fork and Teton River, St. Anthony to Rexburg, 1952

(St. Anthony dates and 24-hr. sec.-ft. except as noted)

Station	May	June	July	Aug.	Sept.	Season
Teton River	74,380	58,740	30,950	21,675	17,304	203,049
Henrys Fork	162,820	102,150	50,035	48,570	45,170	408,745
Total Supply	237,200	160,890	80,985	70,245	62,474	611,794
H.Fork diver.	32,883	24,350	24,023	21,560	13,621	116,437
Teton diver.	26,356	31,461	29,739	21,564	15,457	124,577
Rexburg	191,135	130,510	51,192	51,080	49,710	473,627
Tot.acct.for	250,374	186,321	104,954	94,204	78,788	714,641
Tot.gain s.f.	13,174	25,431	23,969	23,959	16,314	102,847
Mean gain s.f.	425	848	773	773	544	672
Tot.gain ac.f.	26,130	50,442	47,542	47,522	32,359	203,995

The gain in this section was greater each month than a year ago. The total gain for the season was 32% greater than in 1951, most of the increase occurring in May. The gain during July, August and September was about 10% greater than in the same period of the previous year.

TETON BASIN

C. D. Cooper was deputy watermaster in Teton Basin during 1952 with headquarters at Driggs. An ample supply of water was available until about July 7, but due to deficient precipitation stream flows dropped rapidly thereafter and were quite low by September 1. Water deliveries on Teton Creek were made in accordance with the Federal Court decree jointly by C. D. Cooper for Idaho and Mark Wilson for Wyoming. Stream flow and canal records for Teton Basin streams are shown on Plate 24.

Under date of March 17, 1952, the Watermaster of District No. 36 prepared an analysis of the situation on Teton Creek, with suggested revisions in the regulation schedule provided by the Federal decree, as the basis for a compact between Idaho and Wyoming for Teton Basin. This report was sent to the various interested parties in Wyoming and Idaho but no action has been taken on it as yet as no meetings were held during the year by the Teton Basin engineering sub-committee of the Compact Commissions of the two states.

Stored water was diverted in Teton Basin by exchange for natural flow under the terms of an agreement between upper and lower users on that stream that was entered into several years ago. This agreement provides that Teton Basin users may divert 1.625 times the amount of stored water that they deliver from Island Park Reservoir to the gaging station on Teton River near St. Anthony.

Total storage diversions in Teton Basin during 1952 amounted to 6,775 acre-feet. Their rights would have entitled them to divert 9,604 acre-feet if it had been available in the streams in excess of valid natural flow rights during the regulation period.

Some of the Teton Basin streams dropped to flows that would not reach Teton River if regulated according to priority right schedules in effect. At such times these tributary creeks were regulated as independent streams according to the priority rights on the individual creeks.

The following set of measurements was made June 13, 1952 by H. C. Eagle and C. D. Cooper on Teton Creek (falling stage of creek):

Teton Creek at gaging station in Canyon above diversions	510 sec.-ft.
Mill Creek at mouth	20.4 "
Christensen ditch from Mill Creek	2.0 "
Total Supply	532.4 sec.-ft.

Use:

Christensen ditch from Mill Creek	2.0 sec.-ft.	
South Canal	95.5 "	
North Canal	31.8 "	
Central Canal, Wyo.	19.7 "	
Waddel Canal	28.9 "	
Grand Teton Canal	294.0 "	
Teton Creek below Grand Total Canal	156.0 "	
Total use to Grand Teton Canal	627.9 sec.-ft.	627.9 sec.-ft.
Gain from Gaging station in Canyon to Grand Teton Canal		95.5 sec.-ft.
Central Canal, Idaho	33.9 sec.-ft.	
Price-Fairbanks Canal	38.9 "	
Christensen-Cordon canal	0 "	
Teton Creek below diversions 1¼ mile E. of Driggs	70.0 "	
Total accounted for below Grand Teton Canal	142.8 sec.-ft.	
Loss from Grand Teton Canal to below diversions		13.2 sec.-ft.

The following miscellaneous measurements, not listed on Plate 24, were made on several west side creeks in Teton Basin during 1952 (flow in second-feet):

	June 6	June 17	July 2
Mahogany Creek above diversions	71.6	31.5	15.6
Horseshoe Creek above diversions	43.4	26.3	
Packsaddle Creek above diversions	86.4	19.5	

Owing to amount of time required to regulate water on South Leigh Creek, Seth Hansen was appointed as Deputy Watermaster on that stream. One half of the cost of his services, or $136.00, was charged as a special expense to users on South Leigh Creek.

DISTRIBUTION IN SWAN VALLEY

F. S. Thomas again acted as Deputy Watermaster in Swan Valley. He also served as watermaster on the local canals for which the local users were charged $321.75 for 117 days @ $2.75 per day as a special cost in addition to their share of the regular District No. 36 costs.

The results of various measurements made by him on streams in the Swan Valley region are shown on Plate 24.

Waterusers in this section rented a total of 545 acre-feet of storage compared to only 91 acre-feet in 1951.

Year	21.31	16.21	6.16	11.61	9.14	14.02	8.65	9.81	16.51	16.98

The average annual precipitation at the nine stations was just about normal. There were, however, marked variations in different parts of the watershed. The annual precipitation was above normal at Snake River, Bedford, Irwin and Ashton; it was below normal at Moran, Jackson, Idaho Falls, Pocatello and Twin Falls.

On an average, precipitation was above normal during October, December and February. After March it was below normal every month for the balance of the water year.

EXPENDITURES DURING YEAR ENDING DECEMBER 31, 1952

Engineers and Hydrographers

Lynn Crandall	Salary 1 year	$9,304.74
Henry C. Eagle	Salary 1 year	6,355.48
Melvin Luke	Salary 5 months @ $325 mo.	1,625.00
A. H. Bush	Salary 3.42 mo. @ $275 mo.	940.31
Oleen Dummer	Salary 3.64 mo. @ $275 mo.	1,000.49
C. D. Cooper	Salary 3.36 mo. @ $275 mo.	923.77
R. H. Seymour	Salary 0.32 mo. @ $275 mo.	87.93

Clerk

Charlotte M. Elg	Salary 1 year	3,655.08

NOTES

(1) 252 A.F. FROM U.S.; 293 FROM TWIN FALLS CANAL CO.

(2) 611 A.F. FROM U.S.; 359 FROM TWIN FALLS CANAL CO.

(3) FROM U.S.

(4) TRANSFER FROM ENTERPRISE TO PROGRESSIVE IRR. DIST.

(5) FROM TWIN FALLS CANAL COMPANY.

(6) 639 A.F. FROM U.S. FOR BLAKELY, TERRY, TOMCHACK, MACKAY, JACKSON, RADFORD, MASON, PICKERING, QUINN, FOX, ROWLS AND CHENEY; 10 A.F. FROM T.F. CANAL CO. FOR BROWN AND ROTH.

(7) FROM MARKET LAKE SPRINGS.

(8) LAKE WALCOTT 93,440 A.F. ON JULY 5 PLUS 59,269 GAIN NEELEY TO MILNER.

(9) SEE PLATE 22 FOR AMERICAN FALLS STORAGE USED ON HENRYS FORK.
