

Attn. Nick Miller IDWR

Nick,

as per phone conversation 6/17/2013 about futile call above the Reservoir.

I will send pictures and logs tomorrow.

Thursday 6/13/13 a decree was changed from 3-1-1902 to 6/4/1898 and applied to both below and above the Reservoir.

as a result of the decree change 37.6 CFS were removed from diversions above the reservoir.

the bridge readings were as follows:

	6/14	6/15	6/16	6/17	
Chilly Bridge	3.36	3.24	3.16	3.14	Stoffgog readings
Danahue	2.22	2.16	2.06	2.04	
Placer	2.32	2.21	2.1	2.06	
Chilly Temp ~ 6:30 AM	30	24	26	32	
Reservoir inflow	503	448	407	386	CFS
Howell gage ^{6/13} _{6/14}	866	742	624	575	
				563	

Since I am causing injury to water users above the reservoir by holding them to the same rights as one on below the Reservoir, and since Curtailment of 37.6 CFS does not appear at any of the downstream measurements there is no beneficial use of the curtailed water; therefore a futile call is required.

Dist. 34 Roger Ecker
