SUMMARY

The 2014 water year started out with near normal levels of precipitation and continued throughout the winter months. Water year 2014 was an average year for the irrigators with normal amounts of water for all uses in the valley. Spring and summer temperatures resulted in average demand on the storage system. The Bureau leased 51,000 acre feet for flow augmentation as the system filled. The flood control committee (the Watermaster, Idaho Dept. of Water Resources, Boise Project Board of Control and the Bureau of Reclamation) met to review the accounting for 2014 flood control. It was determined that all storage accounts filled with the exception of last to fill storage for the Bureau of Reclamation, approximately 15,000 acre feet. Thanks to very good management through the 2014 season, water managers were able to keep water in their canals thru the month of October and provide for about 38% carryover storage at the end of October.

There was about 1.4 million-acre feet of run-off, which is below the 30-year average of 1.85 MAF. (New 30 year average) Irrigators and water managers again practiced strict water management techniques to stretch their natural flow and storage water. There was approximately 360,000 acre feet left in the upper three reservoirs at the end of the 2014 season. This is near average amount of carry-over. Irrigators and managers learned a lesson during the drought periods and are becoming more and more efficient with their water even in the years of plenty.

The Boise River Rental Pool was used by the irrigators, and was also used to provide water for salmon recovery efforts. There was 59,134 acre feet leased through the pool, 4,902 acre feet were used for consumptive use. With the recent dry cycles, most storage holders are still being very conservative about placing water in the pool, opting to carry it over rather than being caught short in another dry year.

In 2010 the Water User's decided to embark on an automation project for all diversions on the lower Boise. During phase one Farmers Union, New Dry Creek, Middleton, Little Pioneer, Canyon County, Caldwell Highline and Riverside diversions were automated. Phase two brought in the Bubb Ditch, Rossi Mill Ditch, Ballentyne Ditch and Eureka #2. (The New York, Ridenbaugh, Boise City, Settlers and Phyliss canals were automated prior to this program by the irrigation entitles who manage those canals.) This program is in part thanks to a federal grant from the Bureau of Reclamation for water conservation. This project is continuing in a limited fashion as long as funding is available.

One other problem that can occur on the river is that there is some moderate flood control from time to time; this leads to some minor flooding due to the channel restrictions. The channel at the Eagle Island split will not handle normal flood releases and there were several rather worried homeowners and developers. More aggressive river maintenance must take place if the river is to handle these high flows.

All of the data presented in this report will be based on an irrigation year, November 1st to October 31st. Only information concerning the Annual Water Users Meeting or budget matters will be based on a Calendar Year.

We take this opportunity to express our appreciation and gratitude for the assistance of the Idaho Department of Water Resources, the Central Snake Project Office of the Bureau of Reclamation, the NRCS snow survey and the United States Geological Survey

ORGANIZATION

The Annual Meeting of Water District #63 was held January 12, 2015, at 1:00 P. M., in the Star City Hall Public Meeting Room, Ada County, Idaho.

Mr. Rex R. Barrie was elected Watemaster to serve from this annual meeting until the next meeting in 2016.

The Watermaster was authorized to hire the necessary assistants to regulate the distribution of water within Water District #63.

The Water Users adopted a budget of \$87,250.00 for the 2015 water year.

The following Water Users were elected to serve on the Advisory Board:

Vernon Case, Chairman

Sam Rosti, Secretary

Mike Houston

Martin Galvin

Ron Blickenstaff

Larry Story

Alan Newbill

Jim Payne

Clinton Pline

Randy Davison

Oscar Baumhoff

Any other meetings to be held during the year are subject to the call of the Chairman of the Advisory Board.

January - July Runoff Above Lucky Peak Dam 1965 - 2014

Historical Information

Water rights data contained in the Stewart and Bryan Decrees section of this report have been superseded by the Snake River Basin Adjudication (SRBA).

While the percentage reductions for the Stewart and Bryan Decrees remain in effect, actual water rights and diversion rates before reductions are contained in the SRBA section of this report.

Several rights were disallowed or not filed during the SRBA and as such only the water rights in the SRBA are valid.

This information is being retained for historical purposes and all current water rights are located in the SRBA section.

DECREEES

Stewart Decree:

The old water rights from the Boise River are included in the decree in the case of FARMERS COOPERATIVE DITCH COMPANY, a Corporation, vs. RIVERSIDE IRRIGATION DISTRICT, LTD., a Corporation, et al, signed by District Judge George H. Stewart, January 18, 1906, commonly referred to as the "Stewart Decree". This case was appealed to the Supreme Court and affirmed as to priorities and acreage, but remanded to the District Court for the sole and only purpose of determining the duty of water. In 1914 testimony was taken before the Court as to the duty of water and was transcribed, which consists of approximately 2,630 typewritten pages. The final decree of the Court as to the duty of water has never been entered. However, Judge E. L. Bryan, Judge of the District Court of the Seventh Judicial District of the State of Idaho, issued a continuing order on May 31, 1919, which is still in effect, providing for the distribution of waters of the Boise River in the following manner, to-wit:

"The various rights, as adjudicated in the so-called "Stewart Decree", shall receive 100 percent, until the natural flow of the waters of the Boise River shall decrease, until all the rights in said decree cannot receive 100 percent, at which time the various rights as adjudicated in the so-called "Stewart Decree" shall first be cut to 75 percent of the amount of water decreed by the "Stewart Decree" as the natural flow of the Boise River decreases, beginning with the latest right and proceeding to the earliest rights in the order fixed in said "Stewart Decree", and after all of the rights shall have been reduced to 75 percent of the amount fixed in the "Stewart Decree", should the natural flow of the waters in the Boise River decrease

Historical Information

Water rights data contained in the Stewart and Bryan Decrees section of this report have been superseded by the Snake River Basin Adjudication (SRBA).

While the percentage reductions for the Stewart and Bryan Decrees remain in effect, actual water rights and diversion rates before reductions are contained in the SRBA section of this report.

Several rights were disallowed or not filed during the SRBA and as such only the water rights in the SRBA are valid.

This information is being retained for historical purposes and all current water rights are located in the SRBA section.

below the amount necessary to supply said 75 percent of the water rights as decreed in said "Stewart Decree", then the various rights beginning with the latest and proceeding to the earliest, as aforesaid, shall be reduced to 60 percent of the amount specified in the "Stewart Decree", and 60 percent of the amount decreed in the "Stewart Decree" is hereby fixed and determined as the highest duty of water for year 1919.

Bryan Decree:

In the SEVENTH JUDICIAL DISTRICT of the State of Idaho, Judge E. L. Bryan signed a decree on February 14, 1929, in the case of PIONEER IRRIGATION DISTRICT vs. AMERICAN DITCH ASSOCIATION, et al, commonly referred to as the "Flood Water Suit", or "Bryan Decree". All rights decreed in this case are made subsequent to the "Stewart Decree. This case was appealed to the Supreme Court where it was upheld as to some of the rights involved but remanded to the District Court for retrial on the question of the duty of water and also for the purpose of determining certain other rights.

On January 30, 1932, Judge A. O. Sutton signed an order temporarily establishing the various rights in the "Flood Water Suit" and providing for a duty of water similar to the "Sliding Scale" in the Stewart Decree. On June 23, 1933, Judge Chas. E. Winstead of the THIRD JUDICIAL DISTRICT, sitting as Judge in the SEVENTH JUDICIAL DISTRICT for the State of Idaho, signed a continuing order making the order of Judge Sutton for 1932 effective for 1933 and continuing. This order has remained in effect since that time.

Chart #1 shows the condensed "Stewart Decree", listing right holders, priority dates and the amount decreed. Chart #2 shows the Intervenor in the "Stewart Decree", showing the owner, priority date and amount decreed.

The Stewart and Bryan Decrees are also grouped under the canal name for ease in locating the current right owner, Chart #3.

Chart #4 shows the 60%, 75% and 100% flows required to satisfy the order of Judge Bryan for the Stewart Decree. Also, Chart #5 shows the same thing for the Bryan Decree.

**DELIVERED FROM RETURN FLOW AFTER JULY 15

* FOR FURTHER INFORMATION SEE TEXT OF THIS REPORT, UNDER HEADING, "DECREE".

CLASSIFICATION OF RIVER

The Boise River naturally divides itself into three separate and distinct parts. Section 1 includes the part of the river which lies between the Government Diversion Dam and the Caldwell Highline Canal about a mile below the town of Star. Section 2 includes that section which lies between the Caldwell Highline Canal and the Notus Bridge. Section 3 includes that part of the river between the Notus Bridge and the Snake River.

Section 1

This section is under complete regulation by the watermaster. All water is measured and divided according to the decrees and licenses, which are set by the courts and state law.

Section 2

All water in this section is measured, but operation is more liberal than in Section 1, due to the return flow, so regulation is somewhat relaxed with very little storage water required.

Section 3

This section of the river is operated without any regulation what so ever, but it is measured and recorded the same as Sections 1 and 2. The return flow to Section 3 was sufficient to take care of all rights in this section during most of the season, and therefore no regulations were required. In fact, during all the years on record on the distribution of the waters of the Boise River, beginning with 1914, there has been only one year -1931- during which it was necessary to regulate diversions from this section of the river, and during that year it was not necessary to run water past the Notus Bridge to supply the rights below.

DRAINAGE

As mentioned in the Classification of River section the lower portion of the Boise River diverters depend exclusively upon drainage water to satisfy their water needs. Also, the upper diverters utilize drainage water, but not to the extent the lower users do. From Diversion Dam down stream, there are three active Drainage Districts, No. 2, No. 3 and No. 4. These three Drainage Districts have various court orders dividing up the drainage water (see Chart #6 for the apportioning of this water).

D.D. #2 embraces an area of 29,000 acres situated on the north side of the Boise River, between the City of Boise and the canyon near Caldwell. The major drains that make up D.D. #2 are the Eagle, Hartley, North Middleton, South Middleton Drains and both Hartley Gulch and Willow Creek. Three other drains, that divert into canals within the district, are the Long and Star Feeders, plus the Watts Check.

D.D. #3 is frequently referred to as the "South Boise Drainage District", and is located in the South Boise area. This district, comprising an area of 4,200 acres, has four drainage canals, all emptying into the Boise River. The three major ones in this district are the Ridenbaugh, Booth and Myers Drains.

D.D. #4 is known as the "Thurman Drain", it drains an area of about 2,500 acres and is situated south of the Boise River and opposite the town of Eagle. The District has one drain, the Thurman.

These three Drainage Districts by no means represent the entire Boise River drainage systems. There are several

major drains and many small unmeasured drains that contribute to the return flow supply. See the appendix for the drain discharges that the Boise River Watermaster monitors.

TRANSFERS

The various water rights on the Boise River, whether they be decree or license, are subject to change. As the rights have new owners or the irrigation practices change, these rights are so modified to fit the new situations. Most changes occur with the filing of a Transfer with the Department of Water Resources; this transfer filing can modify or move the point of diversion, the place of use or change the nature of use of the water within the right. Chart #7 shows all the point of diversion changes that have occurred over the years.

FLOOD CONTROL

With three dams on the river, flood damage should be held to a minimum. There will still be some damage along the river from erosion until such time as protecting levees can be built in certain places on both banks of the river.

An agreement has been entered into between the Army Corps of Engineers, the Bureau of Reclamation and the water users, whereby Arrowrock, Anderson and Lucky Peak Reservoirs will be used jointly for both irrigation and flood control. It is anticipated with this arrangement, the three reservoirs plus irrigation diversions, will control the more frequent floods of 6,500 C.F.S. or less at Boise. However, although major floods will be regulated to a considerable degree, there is insufficient storage to control these more rare floods to river capacity and some flooding downstream will occur.

SNAKE RIVER BASIN ADJUDICATION (SRBA)

INTERIM ADMINISTRATION OF BOISE RIVER WATER RIGHTS

The Idaho Department of Water Resources requested and was granted Interim Administration of all water rights on the Boise River in 2011. This was a result of the completion the SRBA on the Boise River. Some water rights were increased and some decreased based on the SRBA decisions.

Currently Water District No. 63 administers all lower river rights based on the Stewart and Bryan Decrees and the SRBA.

A summary of the SRBA by Mr. Dave Shaw, former IDWR employee is included for information purposes only.

The following tables show a listing of all SRBA rights administered in the lower Boise River.

SNAKE RIVER BASIN WATER RIGHT ADJUDICATION

by

David B. Shaw

Idaho Department of Water Resources

August 1988

Recent History

In 1982 the Idaho Supreme Court handed down its decision in the Idaho Power Company v. Idaho Case involving Idaho Power Company's water rights at Swan Falls Dam. The court ruled that the water rights at Swan Falls had not been subordinated by the 1950's era agreement which allowed Idaho Power Company to build the Hells Canyon hydroelectric complex as had been asserted by the state. This ruling by the court meant the state of Idaho went from a partially appropriated to an overappropriated water system on the Snake River.

Attempts were made during both the 1983 and 1984 Idaho legislative sessions to resolve the conflict that existed between upstream development interests and the supporters of Idaho Power and instream flow interests. A legislative solution was not reached and a legal cloud existed over the status of thousands of Snake River water rights. In addition, new development could not proceed since unappropriated water was not available in the Snake River and its tributaries if Idaho Power's hydropower water rights were to be satisfied.

In 1984 the state, through the Governor and the Attorney General, and Idaho Power were able to agree to negotiate a settlement to the Snake River water rights conflict. Incentive to solve the conflict by negotiations came from the recognition that a solution was necessary and the anticipated delay, expense and uncertainty that would be involved in a litigated solution.

After much effort by all parties involved, the negotiations were successful and the Swan Falls Agreement, which resolved the conflict with the Idaho Power's water rights from Swan Falls upstream, was signed on October 25, 1984. Included with the agreement among other requirements was a requirement to adjudicate the water rights in the Snake River Basin.

The Adjudication Process

The term "adjudicate" means to settle judicially. A water right adjudication should be termed "a fair, comprehensive, technically correct and legally sufficient determination (identification and quantification) of existing water rights". In Idaho adjudications are conducted by the court and the Department of Water Resources acts as a technical expert for the court in conducting investigations of existing water rights. The department has extensive responsibilities spelled out by statute, to the state and the court in water right adjudications.

On June 17, 1987 the Director of the Department of Water Resources filed a petition in the District Court of the Fifth Judicial District in Twin Falls to commence the Snake River Basin Adjudication. The Honorable Daniel C. Hurlbutt, Jr. set a hearing on the commencement petition for September 8, 1987 in Twin Falls. The director's petition proposed to adjudicate the Snake River Basin upstream from and including the Salmon River drainage.

The court, in its commencement order of November 19, 1987 determined the Boise, Weiser, Payette and Lemhi Basins should be included in the adjudication and the adjudication should be extended downstream to include the remainder of

the Snake River in Idaho and the Clearwater Basin. An appeal of the inclusion of the Boise and Weiser River drainages is currently being considered by the Idaho Supreme Court.

The district court has entered an order establishing procedures to be followed by anyone wishing to make filings with the court. Anyone wishing further information as to the procedure may contact the department.

The department has begun soliciting notices of claims to a water right from water users in the Snake River Basin. Because of the size of the basin to be adjudicated water users are being notified by counties of the need to file their claims. After notification water users have 90 days to complete their claims and file them with the department. Department staff are available if assistance is desired. The department also has available existing water right records, maps and aerial photography to assist with the claims taking process.

Department staff will compare water rights claimed with known water uses to be certain the water rights claimed are complete and accurate. Investigation of water uses will be conducted using available data, computer and satellite technology as well as field inspections. Investigations will also be conducted to determine land ownership, so land owners who have not claimed water uses identified by the department can be notified of their duty to file a claim for their water use.

At the completion of the investigation, the department will compile a report of water rights for the court. This report will identify the elements of each water right so that the right can be properly identified as a property right as well as quantified for proper delivery of water.

Those water rights that have been previously decreed will be reaffirmed and updated by the Snake River Adjudication. Since some older decrees do not identify all the elements necessary to properly deliver a water right, the Snake River Adjudication will make the ownership of these rights more secure through their proper identification as they exist today reflecting the changes that have taken place since the original decrees were completed.

As the adjudication proceeds, claimants who disagree with the findings of the department will be urged to meet with the department to resolve those differences. If the differences between the department's determination and claimant's view of his water right cannot be resolved, the question will ultimately be settled by the court.

Federal Water Users To Be Included

Under the 1952 McCarran Amendment, the U.S. Government can be joined in a state court action for the purpose of adjudicating water rights. The state court, after the commencement hearing, has determined the extent of the area to be included to obtain "general adjudication" jurisdiction over the U.S. Government as required by the McCarran Amendment.

The state of Idaho, through the Idaho Water Resource Board, has entered into and will continue negotiations with the Shoshone-Bannock Indian Tribes to determine the extent of the Tribes federally reserved water rights for the Fort Hall Reservation. A negotiated determination of the Tribes water rights could save years of litigation and millions of dollars in the time and cost of the Snake River Basin Adjudication.

Other Indian tribes and federal agencies holding land reservations in Idaho have been contacted regarding the negotiation of their reserved water rights. Contacts with these entities are continuing and further negotiations are anticipated and will proceed concurrently with claims filing for state acquired water rights from private water users.

Effect of the Decree

The new decree will provide for the identification and security of ownership of water rights that has not been available since the early 1900's if ever. The decree will be binding on all water users and will identify the water rights as they exist today. This will minimize future challenges against those water rights as long as the rights continue to be used according to law.

The Snake River Basin Adjudication will be the largest adjudication attempted to date in Idaho and probably the largest in the nation. Thus far, the state has adjudicated other rivers including the Payette River Basin in which more than 9,000 water rights were decreed. The extent of the Snake River Basin Adjudication proposed in the court's commencement order may result in the determination of as many as 185,000 water rights. A two year effort has begun to take the claims of 185,000 water users.

The adjudication of the Snake River water rights will be a time consuming, costly effort for the state and water users. This adjudication is essential, however, to provide the state with a key element required to manage and regulate this valuable resource in the future.

If you have questions about the Snake River Basin Adjudication you may contact the Water Resources office nearest you or the Water Resources State Office at 334-7906.

CANAL REGULATIONS

The first canal diversions occurred on April 1st, and continued until October 31st of this year. As mentioned, this was an average water year with 1.4 million-acre feet of water being produced (30 Year Average 1.85 MAF). The summer held normal temperatures which resulted in near normal demand from storage. The summer and fall temperatures were average with normal amounts of summer and fall rain. Most of the major canals continued to deliver until October 15th.

The appendix shows the diversions in downstream order, with daily flows in C.F.S. and monthly and yearly totals of both C.F.S. and Acre Feet.

STORAGE WATER

The first storage water used in the system started in the month of April 2014, and continued in varying amounts until the middle part of October 2014. As of the 31st of December 2014, there was 217,611 acre feet left in Anderson Ranch Reservoir, 181,421 acre feet in Arrowrock Reservoir and 78,765 acre feet in the Lucky Peak account. The total in the 2014 storage accounts at the end of the irrigation season was 390,787 acre-feet. This is about 50 % of capacity. Lake Lowell held 92,603 acre feet on 12/31/2014

Table #1 reflects total space, fill, evaporation and yield in the upper three reservoirs. Table #2 shows the amount of storage that each of the storage holders are entitled to from the three reservoirs and Tables #3, #4 and #5 are the 2014 storage accounts of the various space holders.

The storage for 2014 was figured using a computerized water right and storage accounting program. The appendix shows the preliminary gauging station and reservoir data used in the accounting program. This data is subject to some later revisions, but was the best available at the time the program was run.

MISCELLANEOUS

Page #57 is general information on the number of acres that are under each canal. These acres represent the best available information at this time, due to the age of the information; caution should be used in its use.

WATERMASTERS REPORT 2014

2013/2014 started out with near normal precipitation in the basin. Snow pack levels average 80 to 90 % of normal during the winter months. Flood control operations began on March 28, 2014 and continued until June 6, 2014. Natural flows reach a peak of 9800 CFS on May 30, 2014. The January thru July runoff was 1.4 MAF. Reservoir levels at the end of October were reported at 38% of capacity. The Flood Control Committee Met and reviewed the flood control operations for 2014. It was determined that all space holders rights were filled with the exception of the Bureau of Reclamation last of the last to fill space.

Irrigators enjoyed a normal irrigation year with most systems shutting down in mid-October.

Reservoir levels on January 5, 2015 were reported at 51% of capacity which is near normal. An early snow storm brought 8 to 10 inches of snow to the valley November 13 and mountain snow ranged from 10 to 30 inches across the basin.

Rental pool activity was near normal this year with 46,232 AF leased for flow augmentation. 40,932 BOR space and 5,300 from space holders. Idaho Power leased 8,000 AF for power generation. Total out of basin use was 54,232 AF. In basin lease was reported at 4,902 AF. \$76,992.00 in revenue was generated from the administrative fee of \$1.30 per AF for Water District # 63.

Upper basin administration is underway but proceeding slowly as the final measurement order was signed by the director on August 15, 2014.

WATERMASTERS REPORT 2014

2013/2014 started out with near normal precipitation in the basin. Snow pack levels average 80 to 90 % of normal during the winter months. Flood control operations began on March 28, 2014 and continued until June 6, 2014. Natural flows reach a peak of 9800 CFS on May 30, 2014. The January thru July runoff was 1.4 MAF. Reservoir levels at the end of October were reported at 38% of capacity. The Flood Control Committee Met and reviewed the flood control operations for 2014. It was determined that all space holders rights were filled with the exception of the Bureau of Reclamation last of the last to fill space.

Irrigators enjoyed a normal irrigation year with most systems shutting down in mid-October.

Reservoir levels on January 5, 2015 were reported at 51% of capacity which is near normal. An early snow storm brought 8 to 10 inches of snow to the valley November 13 and mountain snow ranged from 10 to 30 inches across the basin.

Rental pool activity was near normal this year with 46,232 AF leased for flow augmentation. 40,932 BOR space and 5,300 from space holders. Idaho Power leased 8,000 AF for power generation. Total out of basin use was 54,232 AF. In basin lease was reported at 4,902 AF. \$76,992.00 in revenue was generated from the administrative fee of \$1.30 per AF for Water District # 63.

Upper basin administration is underway but proceeding slowly as the final measurement order was signed by the director on August 15, 2014.

The bank balance as of December 8, 2014, checking \$5,251.75, Money Market \$332,830.66 and State Investment \$47,975.12

Space holders will be paid \$259,742.54 from the Money Market account and Idaho Water Resources Board, \$18449.86.

2015 budget is proposed at \$87,250.00 this does not include operational costs or proposed cloud seeding operations.

The audit report has been received by Mr. Gary Merkle and no discrepancies were noted.
