

WATER DISTRIBUTION OF BOISE RIVER
DISTRICT NO. 12-A
1941

REPORT ON
CANAL DELIVERIES FROM
BOISE RIVER

AND
DIFFERENT FEATURES AFFECTING THESE
DELIVERIES FOR THE IRRIGATION SEASON
OF 1941

(DATA FOR THIS REPORT GATHERED BY THE
WRITER WHILE ACTING IN THE CAPACITY
OF WATERMASTER OF THE BOISE RIVER AND
SPECIAL DEPUTY IN CHARGE OF THE DIS-
TRIBUTION OF STORAGE WATER FROM ARROW-
ROCK RESERVOIR)

(COOPERATIVE DATA ALSO FURNISHED BY THE
UNITED STATES BUREAU OF RECLAMATION AND
THE UNITED STATES GEOLOGICAL SURVEY)

BY

WM. E. WELSH

1. Map of Boise River, showing canal diversions.
2. Natural Flow Boise River by Days - 1941.
3. Table showing mean daily flow of Boise River for a 42-year period.
4. Table showing monthly and annual flow of Boise River in acre feet for the irrigation years beginning 1894-1895.
5. 5-A, 5-B, 5-C, 5-D, and 5-E, daily discharge of all canals (Sections 1 and 2) for irrigation season of 1941.
6. Summary table in acre feet showing monthly and total canal diversions for the irrigation season of 1941.
7. Summary table showing total annual diversions for all Boise Valley Canals beginning 1916.
8. 8-A and 8-B, daily discharge of all principal tributary streams feeding water to Boise River below More's Creek for irrigation season of 1941.
9. Two tables showing Boise River at Diversion Dam, canal deliveries, tributary gain, seepage gain and net gain by months in acre feet and average daily flow in 24 hour second feet for the irrigation season of 1941.
10. Two tables for section 1 of Boise River showing river at Diversion Dam, canal deliveries, tributary gain, seepage gain, and net gain between Diversion Dam and Star by months in acre feet and average daily flow in 24 hour second feet for irrigation season of 1941.
11. Two tables for section 2 of Boise River showing river at Star, canal deliveries, tributary gain, seepage gain, and net gain between Star and Notus by months in acre feet and average daily flow in 24 hour second feet for irrigation season of 1941.
12. Table showing acreage under all canals in the Boise Valley.

ORGANIZATION

C H A R T S

(Continued)

13. Table for Boise Valley canals showing acre feet diverted, acres irrigated and acre feet per acre diverted for the season of 1941.
14. Table showing acre feet per acre diverted by 18 canals from Boise River for each irrigation season beginning in 1916.
15. Summary table showing diversions from Boise River in acre feet, acre feet per acre, and the rate in miner's inches per acre for 18 Boise Valley canals for each month of the irrigation season during the years 1916 to 1941 inclusive; also, the per cent diverted during each month.
16. Chart showing average headgate duty of water for 18 Boise Valley canals.
17. Table showing total canal diversions and total discharge of drainage canals in Drainage District No. 2 for the irrigation season of 1941.
18. Summary table of return flow to Boise River between More's Creek and Notus beginning 1914.
19. To tables showing total discharge of all drainage canals in drainage Districts No. 3 and 4, for the irrigation season of 1941.
20. 20-A, 20-B, revised area and capacity table for Arrowrock Reservoir.
21. Table showing additional decrees on Boise River (Intervenor's in the Stewart Decree), giving priority number, date and amount decreed.
22. Table showing change in point of diversion of decreed rights on Boise River.
23. Table showing transfers of decreed rights on Boise River.
24. Condensed table of Stewart Decree showing dates of Priority and amounts decreed.
25. Stewart Decree grouped under canal headings.
26. 26-A, 26-B, 26-C, tables showing decreed rights (Stewart Decree) and natural flow at Diversion Dam necessary to fill same. 26-D, table showing decreed rights (Bryan Decree) and natural flow in second feet necessary at Diversion to fill same.

at Twin Springs and More's Creek at Cell Bridge.

ORGANIZATION

The Boise River Organization consists of a Chairman and Secretary, an Advisory Committee of 9 members, a Watermaster and one part time Secretary and Stenographer; also one Assistant Watermaster who is employed during the irrigation season on the lower end of the Boise River.

The Advisory Committee, although not authorized by law, is elected by the water-users at the annual meeting on the first Monday in March. This Advisory Committee is selected from various sections of the Boise Valley. In addition to preparing and recommending a budget for the annual meeting, it meets from time to time to consider various questions affecting the water-users and the water rights from the Boise River. It also considers and assists in determining questions of policy having to do with the operation of Water District 12-A.

This Committee for 1941 was as follows: distribution of
J. M. Lampert, Chairman
Ed Straus, Secretary
Ernest Anderson
J. C. Bell
T. M. DeCoursey
John Demond
W. T. Evans
H. V. Rice
I. A. Weaver

Cooperative assistance is rendered by the Board of Control in current meter work, compiling records, maintaining phone to Arrow-rock, etc., for which proper remuneration is given.

Cooperative assistance is rendered by the U. S. Geological Survey in current meter work and compiling records of Boise River at Dowling and Notus, South Fork near Smiths Prairie, Middle Fork at Twin Springs and More's Creek at Call Bridge.

Mention should also be made of the splendid assistance and cooperation rendered by the Commissioner of Reclamation in furnishing office room and equipment and the many courtesies extended during the year by the personnel of this office.

DECREE

The old water rights from the Boise River are included in the decree in the case of FARMERS COOPERATIVE DITCH COMPANY, a Corporation, vs. RIVERSIDE IRRIGATION DISTRICT LTD., a corporation, et al., which is commonly referred to as the "Stewart Decree". This case has been appealed to the Supreme Court and affirmed as to priority and acreage, but remanded to the District Court for additional evidence on the question of duty of water, where it has been pending for a number of years. A temporary order providing for the distribution of the waters of Boise River, was issued by the District Court from year to year. In 1919 this order was made continuing. This same order was used for 1941. It provided for the distribution of the waters from Boise River in the following manner, to-wit: "The various rights, as adjudicated in the so-called 'Stewart Decree' shall receive 100 per cent, until the natural flow of the waters of Boise River shall decrease, until all the rights in said decree cannot receive 100 per cent, at which time the various rights as adjudicated in the so-called 'Stewart Decree' shall first be cut to 75 per cent of the amount of water decreed by the Stewart Decree as the natural flow of the Boise River decreases, beginning with the latest rights and proceeding to the earliest rights in the order fixed in said 'Stewart Decree', and after all of the rights shall have been reduced to 75 per cent of the amount fixed in the Stewart Decree, should the natural flow of the waters in Boise River decrease below the amount

necessary to supply said 75 per cent of the water rights as decreed in said Stewart Decree, then the various rights beginning with the latest and proceeding to the earliest, as aforesaid, shall be reduced to 60 per cent of the amount specified in the Stewart Decree and 60 per cent of the amount decreed in the Stewart Decree is hereby fixed and determined as the highest duty of water for the year 1919."

In the SEVENTH JUDICIAL DISTRICT of the State of Idaho, JUDGE ED. L. BRYAN, signed a decree on February 14, 1929, in the case of PIONEER IRRIGATION DISTRICT VS. AMERICAN DITCH ASSOCIATION, ET AL., commonly referred to as the "FLOOD WATER SUIT", or "BRYAN DECREE". All rights decreed in this case are made subsequent to the Stewart Decree. This case was appealed to the Supreme Court where it was upheld as to some of the rights involved but remanded to the District Court for retrial on the duty of water, also for the purpose of determining certain other rights.

On January 30, 1932, JUDGE O. E. SUTTON signed an order temporarily establishing the various rights in the Flood Water Suit and providing for a duty of water similar to the "sliding scale" in the Stewart Decree. This order has remained in effect since that time.

Chart 26, 26A, 26B, 26C, relate to the Stewart Decree and show the following information: Number of priority, name to whom decree was issued, section of River in which point of diversion is located, amount of decree in second feet showing 100 per cent, 75 per cent, and 60 per cent. It also shows the amount of natural

flow necessary at Diversion Dam to fill the various rights in the Stewart Decree, including intervenors, to 60 per cent, 75 per cent and 100 per cent. In computing the amounts necessary to fill the various rights in this table it is assumed that the return flow will fill the first 32 rights to 60 per cent of the amount decreed. It is also assumed that the return flow to section 2 and 3 of the River would fill the rights with points of diversions in those sections of the River to 75 per cent of the amount decreed.

Chart 26-D is a table showing the decreed rights contained in the Bryan Decree or Flood water Decree. It shows the date of priority name of water users to whom decree was issued, amount of decree in second feet showing 100 per cent, 75 per cent and 60 per cent. It also shows the amount of natural flow necessary at Diversion Dam to fill the various rights in the Flood Water Decree to 60 per cent, 75 per cent and 100 per cent.

BOISE RIVER RUNOFF

At the beginning of the season, it appeared from the precipitation records, snow surveys, and other available information that the irrigation of 1940 would be short. However, due to unprecedented rains scattered intermittently throughout the season practically no shortage occurred. The total runoff for the irrigation year beginning October 1, 1940 was 1,400,910 acre feet.

The same method that was employed for the past several seasons of arriving at the daily natural flow of the Boise River was used during the season of 1941.

For information concerning the natural flow of the Boise River prior to 1941, it will be necessary to refer to previous reports.

Chart 3 is a table showing the mean daily flow of the Boise River for a 41-year period.

Chart 4 is a table compiled from previous charts, showing the total monthly and annual flow of the Boise River in acre feet for the irrigation years beginning 1894 - 1895.

CANAL REGULATIONS

All Canals diverting from the Boise River were regulated at the lower end of the Boise River.

during the entire irrigation season except for a short period

during the latter part of May and the first part of June when

Arrowrock was filled and some water was wasted.

Charts 5 to 5-E, inclusive, show the canal diversions from the period from April 1, to September 30.

Chart 6 shows the monthly and total diversions for the Boise River for the irrigation season of 1941.

Chart 7 is a table showing the return flow, canal diversions, Winter diversions and Winter waste for the entire Boise Valley for

each season beginning 1916.

TRIBUTARY GAIN

Data were gathered and compiled on all principal tributary streams feeding water to Boise River below More's Creek.

Charts 8, 8-A and 8-B, show the daily discharge of the

tributary streams.

NET GAIN

Chart 9 shows the total flow of the Boise River passing More's Creek, canal deliveries, and gain to the river by months in acre feet, and also average daily flow for each month during the season of 1941.

At the headgate of the Caldwell High Line Canal and these 8 canals diverting from Section II of the river are supplied entirely from return flow.

The average return flow to this section during the period was 513 second feet.

SECTION III

The return flow to Section III was sufficient to take care of all rights in this section during the entire season and, therefore, no regulations were required in this section.

DUTY OF WATER

The following statement, a repetition from previous reports, is again included in this report.

"The determination of the duty of water in both the 'Stewart Decree' and the 'Bryan Decree' is still pending in the District Court at Caldwell, Idaho.

"In the opinion of the writer it is doubtful if a fixed and established duty of water will ever prove satisfactory for the Boise Valley. A duty of water that would take care of crop requirements for one season would be inadequate for another. Seasonal conditions are continually changing. Likewise, conditions over the valley are changing. Our knowledge and methods of irrigation are constantly improving with each year of experience.

"An arbitrary duty should not be established without taking into consideration the inherent rights of all those persons who are dependent upon this great natural resource for their subsistence.

IRIGATION

Chart 17 shows the total canal diversions and the total drainage discharge for Drainage District No. 2 for the season of 1941. "An arbitrary duty, if established, should be subject to change from time to time. What that duty should be, I am not prepared to say."

Drainage District No. 3, frequently referred to as the South Boise Valley, is situated in South Boise. This District has four drains or outlets emptying into Boise River, and cuts, under which the Boise River has been operated for more than twenty years, has proved very satisfactory when the entire area of approximately 4200 acres, comprising an area of approximately 2500 acres, is situated in full on page 2 of this report.

Chart 6 shows the amount in acre feet diverted each month, and the total amount diverted each season for the canals of the Boise Valley. This District has only one outlet to the river. Chart 19 is a table showing the discharge of all drains in Boise Valley.

Chart 13 is a table showing the total amount diverted, the acres irrigated and the acre feet per acre diverted from the river by the various canals of the Boise Valley. The amount shown under column "Acre Feet per Acre" cannot be construed as a duty of water for the lands of the Boise Valley, due to the large and varying quantities of return flow water picked up by many of these canals.

Chart 14 is a summary table for the years 1916 and 1941, inclusive, for the diversions of 18 Boise Valley Canals, showing the acre feet per acre diverted.

Chart 15 is a table for 18 Boise Valley Canals for the period from 1916 and 1941 inclusive, showing the total acre feet diverted, acre feet per acre, rate in miner's inches per acre, and per cent per month.

Chart 16 shows the average headgate duty of water for 18 Boise Valley canals.

DRAINAGE

Chart 17 shows the total canal diversions and the total drainage discharge for Drainage District No. 2 for the season of 1941. Drainage District No. 3, frequently referred to as the South Boise Drainage District is situated in South Boise. This District has four drains or outlets emptying into Boise River, and comprises an area of approximately 4200 acres.

Drainage District No. 4, frequently referred to as the Thurman Drain, comprising an area of approximately 2500 acres, is situated South of the Boise River, and opposite the town of Eagle. This District has only one outlet to the river.

Chart 19 is a table showing the discharge of all drains in Drainage District Nos. 3 and 4.

Chart 18 is a table showing the average return flow to the Boise River for the period from 1914 to 1941, inclusive.

A Comparison of charts 17 and 19 discloses the following with reference to drainage discharges:

DRAINAGE DISTRICTS

Year	No. 2	No. 3	No. 4
1922	2.90		
1923	2.99		
1924	2.59		
1925	2.42	1.43	2.66
1926	1.97	1.03	2.07
1927	2.62	1.29	2.70
1928	2.78	1.15	2.55
1929	2.27	1.16	2.02
1930	2.61	.96	2.45
1931	1.99	.86	1.82
1932	2.36	1.25	2.03
1933	2.36	1.18	2.26
1934	2.18	.89	2.34
1935	2.27	1.04	2.10
1936	2.55	1.43	2.12
1937	2.37	.83	2.36
1938	2.84	.83	2.25
1939	2.32	1.00	3.60
1940	2.51	1.01	2.36
1941	2.80	.90	2.30

ARROWROCK CAPACITY

Chart No. 20, 20-A and 20-B show the W. G. Steward capacity table for Arrowrock Reservoir, as revised by W. H. Tuller, Project Manager, Boise Project.

ADDITIONAL DECREES

Chart No. 21 is a table showing the additional decrees obtained by intervenors in the case of Farmers Cooperative Ditch Company, Plaintiffs, vs. Riverside Irrigation District, Ltd., et al. Defendants, which is commonly referred to as the "Stewart Decree".

CHANGE IN POINT OF DIVERSIONS

Chart No. 22 is a table showing the changes in the points of diversions of the decreed rights on Boise River, as recorded in the office of the Commissioner of Reclamation.

TRANSFERS

Chart No. 23 is a table showing the transfer of decreed rights on Boise River as recorded in the office of the Commissioner of Reclamation.

STEWART DECREE

Chart No. 24 is a condensed table of the Stewart Decree. A small circle at the left of the date of priority shows that the right is supplied by "return flow".

Charts Nos. 26, 26-A and 26-B and 26-C are tables showing decreed rights as contained in the Stewart Decree, and the natural flow at Diversion Dam necessary to fill the same.

After the Corps of Army Engineers determined that there was justification
STEWART AND BRYAN DECREES GROUPED BY CANAL HEADINGS
 for flood control, Anderson Ranch Reservoir was decided upon, contracts

This table, Chart No. 25, has been compiled for the benefit
 of those canal companies who have more than one date of priority.
 This table shows the date and amount of each priority and the
 total amount decreed. Estimates have been given out as to the capacity

and cost of Anderson Ranch BRYAN DECREE

Chart No. 26-D is a table showing decreed rights contained
 in the Bryan Decree and the natural flow necessary at Diversion Dam
 to fill the same.

Capacity allocated to Flood Control	45,000	"	"
to Irrigation	255,000	"	"
Total	300,000	"	"

WATERSHED

The question of watershed protection continues to be
 a matter of serious concern to the Water-Users of the Boise
 Valley.

Cost per acre foot of space \$ 12.24

The Water-Users should continue to cooperate with the
 Forest Service. The Forest and Range experimental station
 near Idaho City will probably have some valuable information.

A reasonable program of experimentation and investigation
 should be continued.

The rights and interests of the Water-Users of the Boise
 River should be continuously guarded and protected.

SUPPLEMENTAL WATER

The Water-Users of Boise Valley have been working with the
 U. S. Bureau of Reclamation and other Federal agencies for a good
 many years attempting to solve the problems of supplemental water.

After the Corps of Army Engineers determined that there was justification for flood control, Anderson Ranch Reservoir was decided upon, contracts were let and construction started late in the Fall of 1941. It is anticipated that the completion of this Reservoir will practically eliminate water shortage in the Boise Valley.

The following estimates have been given out as to the capacity and cost of Anderson Ranch Reservoir:

CAPACITY

Capacity allocated to Power	75,000	acre feet.
Capacity allocated to Flood Control	45,000	" "
Capacity allocated to Irrigation	380,000	" "
Total	500,000	" "

COSTS

CHARGEABLE TO POWER	\$ 3,400,000.00
CHARGEABLE TO FLOOD CONTROL	5,050,000.00
CHARGEABLE TO IRRIGATION	4,650,000.00
Total	\$13,100,000.00

Cost per acre feet of space	\$ 12.24
-----------------------------	----------

Annual payments for 40 years per acre feet of space	.306
---	------

MINING OPERATIONS

Numerous applications for mineral leases on the bed of Boise River have been submitted to the State Land Department. The Boise River Advisory Committee has considerable expense in the granting of these leases for the reason that it is the opinion of this Committee that either placering or dredging of the bed of the river will result in considerable silt and sediment being washed down the river with it and do damage to the reservoirs and later to the irrigation canals.

CONCLUSION

That an Advisory Committee with authority to represent the water users in the district with the watermaster is very beneficial and helpful, and should be continued.

Watermaster Salary.....	\$3250.00	
Assistant Watermaster Salary.....	481.95	
Car Mileage.....	1184.64	
Miscellaneous.....	210.01

the water users, are probably not reaching the river during the

CONCLUSION

1. That an Advisory Committee with authority to represent the water users and to advise with the watermaster is very beneficial and helpful, and should be continued.
2. That the records and data as compiled in the watermaster's reports for more than twenty-five years should be continued.
3. That the river naturally divided itself into three sections during the low-water period.
4. That the river can be completely dried up at the lower end of Section I without injury to the rights in Section II during the low-water period of each irrigation year.
5. That the return flow is a vital factor and must be considered in the operation of the river.
6. That all tributary streams should be considered as a part of the available water supply of the Boise River.
7. That the transfer of water rights from Section II to Section I is injurious to the rights already existing in Section I.
8. That the construction of drainage systems in the Boise Valley has changed the irrigation requirements within these districts.
9. That by reason of the construction of these drainage canals, certain waters which were formerly lost through seepage, evaporation and deep percolation, or reached the river during the Winter months, are probably now reaching the river during the

irrigation season and made available for irrigation purposes.

10. That the question of watershed protection is of vital importance to the water users of the Boise Valley.

11. That a reasonable program of research work should be continued by U. S. Forest Service on the Boise River watershed for the purpose of determining the best manner that will not be injurious to the inherent rights of the water users who are dependent upon this resource for a livelihood.

12. That the knowledge and data upon which a permanent duty of water must necessarily be based, are constantly being improved and increased.

13. That an arbitrary duty of water, if established, should be subject to change from time to time.

14. That the temporary "Court Orders", under which the Boise River has been operated for more than twenty years, have proven very satisfactory to the Boise Valley as a whole.

15. That approximately two-thirds of the entire Boise Valley is badly in need of supplemental water.

16. Mining operations in the bed of Boise River should not be allowed.

GRAND TOTAL

7,890
333,016

This acreage is based, in some instances, upon actual surveys and in other cases upon the acreage as determined at the time of the Stewart Decree and is the best information available at the present time. (February 14, 1941)

Ridenbaugh represents old lands within the Nampa and Meridian Irrigation District that are watered by the old Ridenbaugh water rights in the Stewart Decree. The balance of the Nampa and Meridian Irrigation District lands are included under the Board of Control.
