Dec. 2015

RE: WATER deliveries for 2015 in District 41

This year was a very dry year, except for the month of June. I was Short water on the 1st of May. I cut most of the young water in the first part of May and was clear into the 1884 water of the Bench Ditch by the 6th of May. Then with various storms, some of the water came back during May. We had a lot of rain in June, and I gave all the young water back at some point during the month.

In July, I started cutting waters again, and the water never came fully back until people slowed down irrigating in the end of Sept. I pulled the locks off on the first of Oct.

Month of June & July, 20 15

Watermaster James Kabor

P.O. Address Box 157 Rockbl Id 83671

After the irrigation season the Watermaster must forward this book or a suitable report of the records in this book, and the annual Watermaster report to the appropriate IDWR Regional Office.

If this book is lost, the finder will please return it to the Watermaster of the district, as it contains valuable records.

WATERMASTER'S DAILY RECORD

SOURCE Rock Creek

WATER DISTRICT 41

MONTH(S) OF Aug + Sept YEAR 2015

WATERMASTER James Blum

ADDRESS P.O. Box 151
Rockford ID 83281

After the irrigation season the Watermaster must forward record keeping information and the annual Watermaster report to the appropriate IDWR Regional Office.

RECEIVED

DEC 29 2015

DEPT OF WATER RESOURCES
SOUTHERN REGION

Rules for Record Keeping

- 1. Use the daily record book or personal spreadsheet.
- 2. Use a separate daily record book for each stream you administer. Do not mix the users of several streams into one daily record.
- 3. If the water being delivered is measured and the headgate set on a particular day, record the flow in cubic feet per second in the proper grid space. If water diverted at a particular diversion continues to be delivered without a change in the flow or head gate setting, place an 'A' in the grid space for that day. The 'A' represents that the previous flow and head gate setting is "assumed." An 'A' must always be preceded by an actual numerical flow rate.
- 4. If the water being delivered is not actually measured, enter an 'E' in the grid space under the column *Meas. Method* for the particular day that the flow rate is estimated. An 'E' should always follow an estimated numerical flow that is observed and set in the field.
- 5. If water is not being delivered, enter a '0' (zero) in the proper grid space. If the water right is cut off because of unavailability of water, a zero may be entered in the grid space corresponding to the day the right could no longer be satisfied, and all subsequent days when water is not deliverable may be designated with a horizontal line through the grids that represent the days of non-delivery.
- 6. A blank grid space means that you have no knowledge of the amount of water being delivered on that day. A grid should never be blank while you, as watermaster, are delivering water.
- 7. If possible, list the water right number in the daily record rather than a number assigned by the district or by the decree. Future users of the records will likely look for a water right reference. If there are multiple rights at a diversion, please list the most senior right first. You may supplement this book with a list of water rights by priority for each diversion.
- 8. Record unusual or noteworthy happenings. For instance, if a senior downstream right holder's water right is no longer available because the creek dries up upstream, and junior upstream right holders are allowed to divert remaining water upstream, this event should be recorded on the day it happens.
- 9. If necessary or requested, you should submit a separate water rights list or reference sheet that associates water rights with current owners and diversion names.
