RE: Pre-Permit Field Exam on 13-7139
DATE: November 30, 1976

In conversation with Mr. Hansen at his residence in Preston, he stated the spring was located in a ravine on his dry farm and had been developed for stockwater prior to his ownership. The stockwater facility consisted of a cement collection box and buried pipe leading to a cement stock trough. He also stated the water had not been filed on in the past and the stockwater system had been abandoned.

During the field examination, the cement stockwater trough was located but due to thick vegetation direct visual examination of spring and the cement collection box was not possible. However, 50 yards below the spring, water was flowing at approximately 10 gpm. Realizing this pre-permit exam was conducted late in the year, one could assume the rate of flow to exceed this estimate during the designated period of use.

Based on the findings obtained during the field examination, it is my opinion this permit should be granted.
