**To:** Henman, Christina  
**Subject:** Water Right Application 74-16686

Christina:

Could you please add the standard NOAA criteria fish screen condition to this water right? ESA fish are known to occur in this drainage system through several unscreened access points from the mainstem Lemhi River.

- Prior to the diversion and use of surface water for 74-16686 the right holder shall install a functioning NOAA criteria fish screen at the new POD approved by the Idaho Department of Fish and Game.

The Department appreciates the opportunity to review this water right application. If you need additional assistance or information, please don't hesitate to contact the Region's Technical Assistance Manager, Jeff Richards, at [jeff.richards@idfg.idaho.gov](mailto:jeff.richards@idfg.idaho.gov) or 208-756-2271.

Sincerely,

Jeff Richards

Jeff Richards
