Please note: I am on the University of Idaho Experimental Forest regularly and often have poor email access for part of the day. For matters that are truly urgent, please call or send a text to 208-310-0269. Text messages generally work better than calling for most locations on the UIEF.

The following is a list of additional evidence in support of claims submitted by the University of Idaho as part of the Palouse River Basin Adjudication process. Evidence is based on a partial collection of color infrared (CIR) imagery collected on the UIEF in 1969. All images are labeled with project name (UI) and date. These images have not been manipulated in any way, except the comments have been added on the PDFs indicating the location of claims. Hard copies were digitized by Ken Stiller, HAS Images, Dayton, OH, 05402. Coupled with prior information documenting grazing and other use of these areas prior to priority to 1972,

Fire Pond 1: Fire Pond 1 is visible at the upper extent of UI 1969 CIR image 4-07. See file '4-07_comments.pdf'.

Fire Pond 2: Lower middle right of UI 1969 CIR image 4-07. See file '4-07_comments.pdf'.

Fire Pond 3: Images 4-04 to 4-06 are missing from the CIR collection. We know this pond was visible in 1973 imagery, but unfortunately are unable to locate earlier evidence at this time.

Fire Ponds 4 and 5: Fire Ponds 4 and 5 are clearly visible in 1969 CIR image 4-03. See file '4-03_comments.pdf'. Please note

Fire Ponds 6 and 7: Images are missing from the CIR collection. We know these were visible in 1973 imagery and map, but unfortunately are unable to locate earlier evidence at this time.

Fire Pond 8: Fire Pond 8 is clearly visible in UI 1969 CIR image 4-13. See file '4-13_comments.pdf'
