

MEMORANDUM

January 23, 2025

Water Permit: 57-12070

Author: kenglund

Subject: Field Report Narrative

A letter was received from Robin LaRive on January 21, 2025 inquiring on an extension of the delivery system for permit 57-12070. The owner states that they may need to add a point of diversion to the system and have possibly developed more irrigated acreage than was permitted. I reached out to the applicant via voicemail and email. My email explained the water right holder's options for applying for an additional permit or transfer if they have expanded their place of use, or if an additional point of diversion is necessary. More correspondence is required for full understanding of the owner's beneficial use development.

Dr. Mr. Miller,

I am inquiring in regard to my water rights, permit no. 57-12070.

Statement of completion for submitting proof of beneficial use due 8/1/2026.

I have extended my hydrant system from my domestic well to the front of my property pass the 1 area limit and to the back of my property 3 areas, pass the 1 area limit.

However, concerned that I needed to install another well. I can give you more details on property improvements. But if what is really needed is an addition well. Then that is what I will need to do.

Sincerely,

Robin LaRive
