Coeur d Alene ID 83815-7763

To Whom It May Concern:

Enclosed are reports relative to the Annual Meeting of the Twin Lakes Water District 95 C:

Certified 2023 Watermaster's Annual Report

A copy of the Roster of Attendance

Annual Water District Meeting Checklist with attached Agenda of the Meeting

Certified Copy of the Minutes of the Meeting of May 18, 2023

Certified Copy of the Adopted Water District Budget for the fiscal year ending April 30, 2024 and IDWR Budget Worksheets, pages 1 and 3

Water District Contact Sheet for the year ending April 30, 2024

Certified Treasurer Statement of Financial Affairs and Balance Sheet and Income Statement for the year ended April 30, 2023 (unaudited)

Copy of letter to Kootenai County providing them a Certified Copy of the Adopted Water District Budget in accordance with Idaho Code 42-613

There were no resolutions passed at the Annual Meeting.

With the presentation of these documents, I formally conclude my duties as Meeting Secretary for the Twin Lakes Water District 95 C for this fiscal year.

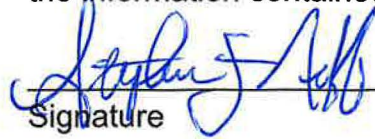

Sincerely,

Renee Miller
Meeting Secretary

AFFIDAVIT OF WATERMASTER

As the appointed watermaster of Twin Lakes Water District 95-C, I hereby certify that the information contained in this report is true and correct to the best of my knowledge.

Signature

Date

- The 2022/2023 season started with significant runoff and precipitation.
 - Snowpack was a little lower than average. However, significant rainfall in May and June left the lake near capacity well into July.
 - Roughly 45 hours were spent measuring flows in the drainage during the 2022 irrigation season.
 - Measurements of the inflows and outflows began on July 7, and continued until October 16, with updates posted to the water district website on a regular basis.
 - Outside of the irrigation season, the watermaster regularly attended Flood Control District 17 meetings and communicated with their board in order to see that water was delivered to stock water right 95-0734 at the Sylte Ranch. Water was successfully delivered to the stock water right throughout most of the year.
- Responses to postcards sent out prior to the annual meeting last year continued into May and June. About two-thirds of the postcards sent to roughly 380 members generated a reply from the property owners.
 - Discussions are ongoing as to what approach to use for the remaining members.
 - Many members still need to update their information with IDWR.
- All users are now paying \$25 per water right holder (changed from "per water right" in 2022).
 - There were no measurements of individual diversions, as was customary since formation of the district in 1989.

- The watermaster assisted Flood Control District 17 (FCD) during the winter months again this year by offering remote control of the spillway gate.
 - The system is somewhat complex, yet only requires a couple minutes to make a change in the gate position without visiting the site.
 - FCD board members have access to a camera system at the spillway, providing immediate verification of the gate position.
 - A system was put into place to bill the Flood Control District for time spent remotely adjusting the dam. It was agreed the watermaster would not be considered a dam tender when adjusting remotely under request of the FCD.

- A \$34,000 grant for measuring equipment at the spillway was approved by the Kootenai County Aquifer Protection Board last summer.
 - The equipment was ordered and manufactured over the winter months and delivered in April. A company installer will be out to complete installation when the gate is in place in the spillway.
 - The Flood Control District has agreed to pay for the remaining installation costs, such as crane operation and gate attachment to the structure. The gate will be considered property of the FCD, as it will be a permanent addition to the structure.
 - Preparations are being made to install the new equipment once spring runoff flows diminish.
 - The new equipment will provide more accurate measurements at low flows during most of the year.
 - This will provide more accurate and transparent flow data for delivering water downstream, as well as a better gate opening to allow debris to pass without obstructing the flow.
 - Flow data will also be shared with the Aquifer Protection District for use in tracking recharge flows to the aquifer.

- There were no Advisory ^{committee} Board meetings held during the 2022/2023 season.
