As far back as I can remember, back in the 1950s, my grandpa ran the ground with a team of horses, and watered crops and had a small herd of holsteins. I don't know when he bought the place, but he had it back in the 30's, and probably had the farm a lot longer. He used the same ditch system that I used as a boy to water the fields. My dad took over the farm, and we continued to water the crops with the ditches. The canals we used had been put in back in the 30's. We'd make our ditches with a tractor, run the water from the canals into our ditches and siphon the water from the ditch with aluminum pipes. We would use 1 inch pipe for row crops and 4 inch pipes for rest. I took over the farm in 1970. In 1984 our community replaced the canals and ditches with pipes. That same year I purchased hand lines to hook up to the new pipe system and slowly replaced them with wheel lines. This is also when the verbal agreement was made with the canal company to use the reservoir water to meet everybody's water right needs. Currently the reservoir and piped system is used on my farm to meet all my water needs.

Donald L. Dunkley

A handwritten signature in cursive script that reads "Donald L. Dunkley". The signature is written in dark ink and is positioned below the printed name.
