5. Description of diverting works:

This is the Weston Reservoir, see dam safety records for description of the impoundment. Water is stored, where it is then released into the creek that is then diverted in multiple locations downstream.

Water comes through the stream, where water drops to an 18 inch underground pipe. This water supplies sprinkler irrigation.

Headgate in the stream that diverts water into a 12 inch pipe system that supplies the town of Weston, and into multiple laterals through city blocks.

Out of the stream, we take 1/3rd of the stream that diverts through a pipe system. Historically, this diversion existed as far back as the company records can recall through an open ditch. The piped water supplies irrigators to the east side of the highway.

Diversion that dams off the stream that diverts water through an open ditch to supply irrigators. There are current efforts to get this portion of the system piped.

6. Water is used for the following purposes:
