Measured Method: (acres irrigated) x (generic diversion rate) = (0.6 acres) x (0.03 cfs/acre) = 0.018 cfs, which rounds to 0.02 cfs.

Comments:

No measurement is required for an in-office examination per IDAPA 37.03.02.035.01.r.

H. NARRATIVE/REMARKS/COMMENTS

This permit qualifies for an in-office exam because it is for irrigation of 5 acres or less. The exam was conducted on February 26, 2025, by Jared Klay. At the time of exam, ownership of the permit is in the name of Ben Burdick. Current Idaho County taxlot data represents the permit holder owns the land appurtenant to the place of use (POU) and point of Diversion (POD). Proof of Beneficial use was submitted on April 18, 2024.

The place of use was described as 1.2 acre on both the application and the permit. However, after further review using both a map provided by the applicant and GIS data, the place of use was actually measured to be 0.6 acres. Thus, I am recommending 0.6 acres for the place of use and 0.02 cfs for the diversion rate. I am not recommending volume, as this use is exempt from volume reporting requirements as per the Beneficial Use Rules.

All the conditions of this permit have been met. The applicant confirmed that they have installed a fish screen on their intake but conditions X15 and X16 will remain on the license per the usage description. Condition 121 will be updated to Condition 103 per the usage description. Condition R68 will be updated to Condition X31 to reflect the recommended rate and associated volume with the confirmed acreage and because the irrigation was measured to be under 1 acre. All other conditions on the permit will be carried over to the license.

Have conditions of permit approval been met? ☒ X Yes ☐ No
