Soda Springs, ID. 83276

Dear water users,

For 2023 I started measuring wells in the Bancroft-Sund water district on May 26, 2023. Irrigation had not started due to the heavy winter and cool spring. I measured the same seven wells that I measured in 2022. As I looked at the starting water levels I was a little surprised that they were variable. I thought all seven wells would have beginning water levels higher than 2022. However, that was not the case. The Holsten well was about even and the Sodd Holbrook well was lower at start up than 2022. The Holsten well is a control well with no irrigation occurring. The Sodd Holbrook well is located on the north side of the railroad tracks and miles away from any active well irrigation. Yet both of these wells had lower start up water levels than 2022. One would think with the Bear River Basin receiving 131% of the normal total water year precipitation all the wells would have higher starting water levels.

On the other hand, as I continued my well measuring duties through out the year; the well levels increased and were

higher than 2022. This indicated to me that the heavy snow fall from the winter of 2022-2023 was starting to catch up with the aquifer through out the summer and fall of 2023. By the time I measured my last well in November the wells had an average 9.28% increase in water depth vs. the last November well readings in 2022. My guess is the above average winter snows of 2023 coupled with the cool spring allowed for a slower transfer of moisture to the aquifer which resulted in higher well levels transmitted during the summer and fall.

At the writing of this report the snow pack in the Bear River Basin stands at 94%. Even though we still have two months of winter left it's nice to know that we have an extra 9% plus ground water surplus.

Recorded below are the expenses I incurred while measuring the irrigation wells through out water district 13-T in 2023.

Travel (4wheeler + p.u.)	401 mi @ 65.5¢/mi	= \$ 262.66
labor	37.4 hrs @ \$19.22	= \$ 719.21
copies and postage		= \$ 5.74
9v battery		= <u>3.70</u>
total		\$ 991.31

Best regards,  
Craig Shuler
