Attachments: 2025 actual irrigation system 2.pdf

Michael,

I have attached a map for the 89 acres we will irrigate under system 2 in 2025. The small polygon is 21 acres, the large is 68 acres. Both polygons allow for some shifting and overspray. Our GIS guru is out until Wednesday, so let us know if you need this as a shape file.

We have been coordinating with Paul Alleman through the process. Our preference is to finalize the transfer so we don't have to revisit it again at the end of the water season if this is possible. Please let us know what we would need to file to finalize the transfer and simultaneously cancel the WSB leases/rentals.

Jason

Anna and Jason.

I think we are getting close to pushing the 2 transfers over the finish line. You may recall that the system 2 transfer proposes a 224.9-acre permissible place of use, which gives IDFG the flexibility to change which 89 acres it will water each year. All I need at this point is a GIS shape file (or some other type of map) that illustrates the location of the 89 acres IDFG intends to irrigate in 2025 under system 2. (I don't need anything else for the 71 acres under system 1).

Also, I talked with Mary Condon, who oversees the Water Supply Bank leases and rentals in Boise. She said that if the transfers were ready for approval before start of irrigation season (4/20), Paul Alleman and IDFG could request cancellation of their WSB leases/rentals for 2025. (The transfer approvals and the cancellation of the WSB leases/rentals would have to be coordinated and would need to take place at the same time). Otherwise, we would not be able to approve the transfers until after rentals are done. My assumption is that approving the transfers and cancelling the leases/rentals would be preferable since the WSB rentals/leases would no longer be necessary. Please coordinate with Paul Alleman and let me know your preference.

Let me know if you have any questions.
