CARMEN ID 83462-4503
2. Accompanied by: Joseph Garrett
Phone No: 208-993-0321
3. SOURCE: Ground Water

B. OVERLAP REVIEW

No overlapping irrigation rights at point of diversion or place of use.
Wells are also used to supply water for domestic and stockwater use.

C. DIVERSION AND DELIVERY SYSTEM

1. POINT(S) OF DIVERSION:

GROUND WATER L1 (NW¼ NW¼), Sec. 19, Twp 23N, Rge 22E, B.M. LEMHI County
GROUND WATER L1 (NE¼ NW¼), Sec. 19, Twp 23N, Rge 22E, B.M. LEMHI County

Method of Determination: Field exam.

2. PLACE OF USE: IRRIGATION

Twp	Rng	Sec	NE				NW				SW				SE				Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	
23N	22E	19					2.1 L1	0.1 L1											2.2
23N	22E	18											0.2 L8	4.8 L8					5.0

Total Acres: 7.2

Method of Determination: Field exam and aerial imagery review.

3. Description of the Delivery System: Submersible pumps supply water to three spigots. Water user connects a hose to the spigots and moves portable rainbird sprinkler stands around the pasture area. Wells are also used for domestic and stockwater purposes and only produce a rate consistent with those uses.

D. FLOW MEASUREMENTS

Only one pump was operational at the time of the field exam. The pump in the other well failed last summer and the water user has not repaired it yet. I used a hose connected to one of the spigots to fill a 5-gallon bucket. The bucket filled in 22 seconds. This equates to a flow of 13.6 gallons per minute.

E. FLOW CALCULATIONS

At the time the bucket measurement was conducted, the operational well was also supplying a large rainbird from another spigot. This would add 4-5 gallons per minute to the total flow. Therefore, one well produces approximately 18 gallons per minute, consistent with the expected flow rate from a domestic well. Water user said that the equipment in the non-operational well is identical to the operational well. Therefore, the maximum system capacity would be 36 gpm, which is equivalent to 0.08 cfs.

F. VOLUME CALCULATIONS

7.2 acres x 3.5 af/acre = 25.2 acre-feet

0.08 cfs x 214 days = 17.12 cfs-days x 1.9835 af/cfs-day = 34.0 acre-feet

G. NARRATIVE/REMARKS/COMMENTS

Water user developed a simple irrigation system from his existing domestic wells. The system only has the capacity to run a few rainbird sprinklers at a time, one in each of the place of use areas. Water user moves the rainbirds around the pasture areas during the summer. Aerial imagery confirms irrigation of the pasture areas. The irrigated areas have green and growing vegetation compared to neighboring properties that are not irrigated.

Permit 75-14851 did not require the water user to install a measuring device. The spigots can be closed and locked. The permit conditions have been met.
