I Pat Lozier attest that the tile drainage water from the tile system originating on the 1657 Reed Ln farm has been used for stock water being pumped from a collection pump house on the property. I personally used this from 1991 to 2023. To my knowledge, from the previous owner, Sam Reed the system was installed in the 1950's and improved in the 1970's to drain the sub water from the farm ground with the residual water to be used for watering stock on the farm property.
