To Whom It May Concern;

I have attached pictures that I have available for my water use. Due to the time of year, I can not get to the property to take more pictures, at least not that would be more informative. 100% of our use is through a $\frac{3}{4}$ hp pump that is moved in and out of storage as we need water from the river. Currently that is approximately 2x per year to fill our storage tank and irrigate/fertilize trees. We intend to use irrigation for grass as well, but at this time, the June 15th use cut off, is before water is really needed for grass. Once full use is in place, we will use it throughout the late summer.

If there is anything else I can help explain or provide pictures after snow out, please let me know.

Thank you,
