Ditch from Fourth of July Creek conveys water to the place of use, where it is applied through flood irrigation

D. FLOW MEASUREMENTS

EZ Ramp flume was installed this year as a measuring device for the ditch, pictured flowing 1.75 cfs

From August to November, the total diversion rate of all other rights on the ditch is 1.16 cfs.

$$0.15 + 0.11 + 0.54 + 0.36 = 1.16 \text{ cfs}$$

With this right, the total authorized diversion from the ditch is 1.38 cfs. The ditch is capable of diverting this right without a in combination with the other existing rights.

G. NARRATIVE/REMARKS/COMMENTS

Right 75-144D was decreed for 0.11 cfs from August 2 to Nov 1. Right 75-144D authorizes .44 cfs early season. For whatever reason, the late-season diversion rate for right 75-144D was not decreed for 0.33 cfs. Other rights from Fourth of July Creek were decreed with a late-season diversion rate that is 75% of the early season diversion rate.

This permit authorizes a 0.22 cfs for a combined 0.33 cfs combined late-season diversion rate for the 11 acres owned by the Hallens. No additional acres were irrigated under this permit.
