I am recommending a 0.05 cfs diversion rate.

(1.7 confirmed irrigated acres) * (0.03 cfs/acre) = 0.051 or 0.05 cfs rounded

H. NARRATIVE/REMARKS/COMMENTS

This permit qualifies for an in-office examination. The permit authorized the diversion of waste water tributary to Little Creek for the irrigation of 2.3 acres. 2023 Google Earth and NAIP Aerial Imagery confirmed 1.7 acres of irrigation occurred within the permitted place of use. A condition on the permit requires the permit holder to install a lockable device allowing the Watermaster to have suitable control of diversion. According to the permit holders Proof Statement a lockable device was not installed. After a phone conversation with the permit holder on October 30th, 2025, they confirmed they did not install a lockable device. However, the permit authorizes diversion from wastewater and is conditioned limiting use of waste water to times when it is available. The permit holder also confirmed they are the end of a ditch system. Therefore, it seems reasonable the lockable device condition be waived. A condition waiver form was received and signed by the Watermaster for Water District 78C on November 17th, 2025.

Administrative Application Processing Memo #17 was used to make a diversion rate recommendation. Since the permit authorized diversion from a natural flowing stream or spring for irrigation a recorded diversion volume is not required at licensing. All of the conditions of permit approval have been met, and a beneficial use was confirmed within authorization on the permit. Therefore, I am recommending a 0.05 cfs diversion rate for the irrigation of 1.7 acres.

Conditions R05, 176, and R67 should remain on the license. Condition 01H should be removed because a waiver form was received and signed by the Watermaster of Water District 78C on November 17th, 2025.

Have conditions of permit approval been met? ☒ Yes ☐ No
