5. Description of diverting works:

Steel structure buried in the ground that diverts water through placing and removing boards.
Water is diverted through an open ditch that then is injected into Clifton Creek.
To the best of our knowledge this is where the diversion point has always been, the legal
description is more accurate due to improved mapping. Cement structure diverts water into
mainlines that gravity flow throughout the system.
This is where water is injected into Clifton Creek and rediverted downstream.
