SUBJECT: *Water Right Transfer No. 78356*
Groundwater Monitoring Report

Dear Mr. Miller,

On January 21, 2016, Water Right Transfer No. 78356 was approved by the Idaho Department of Water Resources (IDWR). The approved transfer included six water rights: 61-12283, 61-12284, 61-12285, 61-12281, 61-12280, and 61-12282. A Condition of Approval of each water right was “the diversion and use in connection with the water right is subject to a Monitoring-Reporting Plan”. As outlined in the Condition of Approval, the right holder shall provide IDWR with a plan for monitoring and reporting of aquifer levels, diversion flow rates, and volumes. The monitoring and reporting plan was submitted to IDWR during May, 2020.

On behalf of J&M Solid Rock, LLC and Shekinah Industries, Inc, Mountain Waterworks has attached the required 2020 annual groundwater monitoring and reporting report for your review. The groundwater monitoring report documents the 2019, 2020 well drilling, as-built well construction, well testing and subsequent 2020 irrigation of 369 acres at a maximum diversion rate of 5.56 cfs. The water produced during the 2020 irrigation season was approximately 291.3 million gallons (MG) or 894 acre-ft (AFA). During 2020 groundwater produced for irrigation of 369 acres was approximately 60% of the maximum diversion volume of 1,476 acre-ft allowed under the six water rights.

The 2020 irrigation of 369-acres within the approved 765-acre place of use (POU) completed the approved water right Transfer No. 78356 through beneficial use of water utilizing the six water rights as listed above.

Background Information

Two new groundwater wells were drilled during 2018, 2019 on land owned by J&M Solid Rock and are the points of diversion under the existing water rights. The wells are identified as J&M PW No. 1 (D0080123) and J&M PW No. 2 (D0082843) and are the new points of diversion for the completed transfer. In addition to the production wells, a shallow groundwater monitoring well (MW No.1) was constructed and developed for monitoring of shallow groundwater. The water rights in total have the potential to divert up to 1,476 acre-feet annually at a maximum diversion rate of 5,56 cfs.

Please contact me directly with questions or comments regarding the attached Groundwater Monitoring Report.

I can be reached directly at 208.850.9978, or tfarrell@mountainwtr.com.

Respectfully submitted,

Mountain Waterworks

Section 1 INTRODUCTION

1.1 Purpose

On behalf of J&M Solid Rock, LLC and Shekinah, Mountain Waterworks submitted a Shekinah Groundwater Monitoring-Reporting Plan (Reporting Plan) to the Idaho Department of Water Resources (IDWR) on May 5, 2020, **Appendix A**. This report shall document compliance with the Reporting Plan and completion of Water Right Transfer No. 78356, **Appendix B**. The status of the monitoring and reporting requirements identified in the Reporting Plan have been updated in **Table 1-1**.

Table 1-1: Reporting Plan Activity Status

Activity	Status
Groundwater Monitoring	
Installation of pressure transducers in the pumping wells (J&M PW. No.1, J&M PW No. 2), with a reading frequency of every six hours for the first year, and re-evaluation thereafter.	Complete
Installation of a barometric pressure recorder in the shallow observation well, with a reading frequency of every six hours for the first year, and re-evaluation thereafter.	Complete
Quarterly hand measurement of water levels for the first year for production wells and the monitoring well, and re-evaluation of measurement frequency thereafter.	Complete
Monitoring at an increased frequency (1-hour) in the production wells at the end of the irrigation season to facilitate water level recovery analysis.	Complete
Flow Monitoring	
Installation of a flowmeter on the production wells to record discharge over the first year with re-evaluation thereafter. The flowmeter should meet IDWR's minimum acceptable standards for measurement and reporting of surface and groundwater diversions.	Complete
Facility Operation	
Initiation of pumping using an uninterrupted, constant withdrawal rate, over 2-day time, to evaluate the effects of extended pumping	Complete
IDWR Reporting	
Reporting of water level data on a monthly basis to IDWR for the first year, and re-evaluation of submittal frequency thereafter	Ongoing, Complete for 2020
Submission of an annual report to IDWR	Ongoing, Complete for 2020

1.2 Background

Water right No. 78356 was approved by the Idaho Department of Water Resources (IDWR) on January 21, 2016. The approved transfer included six water rights: 61-12280, 61-12281, 61-12282, 61-12283, 61-12284, and 61-12285. Two new groundwater wells and a monitoring well were drilled on land owned by J&M Solid Rock during 2018 and 2019. The wells are identified as J&M PW No. 1 (D0080123), J&M PW No. 2 (D0082843), and J&M MW No. 1. J&M PW No. 1 and J&M PW No. 2 are the points of diversion under the new water rights. The irrigation water rights allow for diversion of up to 1,476 acre-feet annually at a maximum diversion rate of 5.560 cfs. The place of use consists of approximately 765 acres owned by four primary landowners.

1.3 Location

J&M PW No. 1 (NWSW quarter-quarter), J&M MW No. 1 (NWSW quarter-quarter) and J&M PW No. 1 (NESW quarter-quarter) are located in Section 14 of Township 1S and Range 4E. The parcels are located south of Highway 84 near Mountain Home, ID (**Figure 1-1**).

1.4 Well Operation

The two production wells (J&M PW No. 1 and 2) are operated by the contract farmer, as needed, to irrigate the crops identified in **Section 1.5**. They are both operated off of variable frequency drives (VFDs); however, the VFD for each pump is operated differently. J&M PW No. 1 is set to maintain flow, while J&M PW No. 2 is set to maintain pressure in the discharge line.

1.5 Cropping plan

Water is diverted from the production wells and pumped to three separate center pivots **Figure 1-2**. The maximum amount of water allowed for irrigation is 4 acre-feet per acre. During 2020 a total of 369-acres were irrigated, (allowed irrigation of 1476 acre-feet per acre). 110-acres were planted as chickpeas and 259 acres were planted as corn.

1.6 Monitoring Plan

Monitoring was conducted in accordance with the Reporting Plan. Additionally, a Plan of Operation, **Appendix C**, was written to provide standard data collection procedures for each well and identifies the monitoring equipment used. A list of installed equipment follows:

- Groundwater level monitoring: Keller DCX-18 ECO lever loggers (water level transducer), **Appendix D**.
- Manual measurements: Solinst Water Level Meter (sounder), **Appendix E**.
- Barometric pressure monitoring: Solinst Barologger 5 (barometric pressure transducer), **Appendix F**.

Groundwater level monitoring occurs in the shallow monitoring well (J&M MW No. 1) and two production wells (J&M PW No. 1 and 2). As shown in **Figure 1-3** all three water level transducers are installed at a depth below maximum pumping water level in each well. A barometric pressure transducer is installed in the shallow monitoring well and is used to accurately calculate water level in all three wells. The barometric pressure recorded in the shallow groundwater well is assumed to be the same in the production wells given their proximity. Monthly manual groundwater level measurements are used to confirm transducer measurements throughout the irrigation season.

Continuous groundwater level and barometric pressure monitoring occur at the same 6-hour intervals during the start of irrigation season. Monitoring frequency increases to 1-hour intervals near the end of the irrigation season to monitor water level recovery in the aquifer.

Flow and total production monitoring are conducted via flow meters installed on the discharge piping of each production well. Each flow meter records totalized flow and instantaneous diversion rate.

Section 2 **GROUNDWATER MONITORING**

Results for continuous and manual groundwater monitoring are presented in the following sections. Complete monitoring data is provided in **Appendix G**.

2.1 Continuous Monitoring

2.1.1 Production Well No. 1 (J&M PW No. 1)

Groundwater level monitoring results for Production Well No. 1 are shown in **Figure 2-1**. The maximum drawdown during 2020 was 149.7 feet corresponding to a pumping water level of 494.7 ft bgs.

Figure 2-1: Production Well No. 1 Groundwater Level Monitoring 2020

Irrigation (water and associated well production) began in May of 2020, which corresponds to the initial decrease in groundwater level. The upward spikes in groundwater level shown on the graph indicate periods of no diversion from Production Well No. 1. Diversion of groundwater from Production Well No. 1 stopped on September 12th and aquifer recovery began. The downward spike in groundwater level observed on September 25th was a brief period of water diversion prior to turning off the pumps for the remainder of the year. The last groundwater level measured was recorded on December 2nd at a pumping water level of 346.4 feet bgs. Groundwater levels recovered to 1.0% of the original static groundwater level with respect to the maximum drawdown.

2.1.2 Production Well No. 2 (J&M PW No. 2)

The groundwater monitoring results for Production Well No. 2 are presented in **Figure 2-2**. The groundwater level was highly variable during the late spring and early summer because the need for crop irrigation was intermittent, causing the well pump to be regularly cycled on and off. The maximum drawdown during 2020 was 123.6 feet corresponding to a pumping water level of 449.6 feet bgs.

Figure 2-2: Production Well No. 2 Groundwater Monitoring, 2020

Diversion of water from Production Well No. 2 ended on September 25th. Aquifer recharge was monitored through December 2nd when the pumping water level was measured as 328.3 feet bgs. Groundwater levels recovered to 0.4% of the original static groundwater level with respect to the maximum drawdown.

2.1.3 Shallow Monitoring Well (J&M MW No. 1)

Barometric pressure and groundwater level were monitored in the shallow monitoring well. Groundwater monitoring results are presented in **Figure 2-3**. The maximum drawdown during 2020 was 105.0 feet corresponding to a pumping water level of 450.0 feet bgs. The shallow monitoring well exhibits similar behavior with respect to drawdown and pumping water level as the production wells. The influence is to be expected, as it is close in proximity to J&M PW No. 1 and its design as a monitoring well for both production wells. Groundwater levels recovered to 5% of the original static groundwater level with respect to the maximum drawdown.

Figure 2-3: Shallow Monitoring Well Groundwater Monitoring, 2020

2.2 Manual Measurements

Manual measurements were taken monthly when transducer (groundwater level and barometric pressure) data was downloaded. They are shown in orange on **Figure 2-1**, **Figure 2-2**, and **Figure 2-3** for Production Wells No. 1 and 2 and the shallow monitoring well, respectively. The manual measurements serve as a baseline, confirming calculation of the groundwater level based on the transducer installation depth and barometric pressure reading. A comparison of manual measurements to transducer measurements is provided in **Table 2-1**. The manual measurements were not always conducted on the same sampling intervals as the transducer, therefore, differences in manual measurements and transducer measurements in this case are not an indication of improper transducer calibration. Some potential causes of differences in data are as follows:

- Well pump switched from on to off allowing recovery and an increase in water level in the time period between the manual and transducer measurements.
- Well pump switched from off to on causing drawdown to occur in the time period between the manual and transducer measurements.
- Diversion rate (flow rate) from well increased/decreased causing the rate of decrease in pumping water level to change accordingly in the time period between the manual and transducer measurements.
- During consistent well pump operation pumping water level will continue to decrease between the manual and transducer measurements.

Changes in flow rate (pump operation) typically result in more substantial changes in water level than consistent well pump operation. Therefore, large differences between the manual and transducer measurements are likely indicative of a change in pump operation.

Table 2-1: Manual Measurements vs. Transducer Measurements

Sample Date	Production Well No. 1		Production Well No. 2		Shallow Monitoring Well	
	Transducer Measurement	Manual Measurement	Transducer Measurement	Manual Measurement	Transducer Measurement	Manual Measurement
5/28/2020	-	-	326.11	328.00	-	-
6/19/2020	352.16	354.60	371.30	430.00	356.41	354.60
7/20/2020	494.39	464.84	446.57	445.40	445.24	401.98
7/21/2020	437.48	409.20	-	-	-	-
8/10/2020	489.63	492.00	448.28	445.00	-	-
9/17/2020	367.44	370.50	391.05	402.60	369.78	368.10
10/22/2020	348.29	350.80	328.03	338.80	352.03	350.57
12/2/2020	346.41	349.25	328.33	328.25	350.32	349.60

Note: The transducer recorded water level referenced for each manual measurement is the closest transducer measurement to the time that the manual measurement was conducted.

Section 3 **FLOW MONITORING**

Continuous flow monitoring by the magnetic flow meter records the totalized flow and instantaneous diversion rate from each production well. These values were recorded monthly when manual groundwater measurements were taken. It is anticipated that equipment capable of continuously recording flow meter data will be installed prior to the 2021 irrigation season.

The pumps operated from May 2020 through September, 2020. A total of 894 acre-feet of water was diverted under the water right at a maximum recorded diversion rate of 5.39cfs, **Table 3-1**. The points of diversion (J&M PW No. 1 and 2) were in compliance with the maximum diversion volume, 1476 acre-feet, and rate, 5.56 cfs, identified in Water Right Transfer No. 78356.

Table 3-1: Flow Monitoring at Simco Production Wells, 2020

Location	Total Diversion Volume		Maximum Recorded Diversion Rate	
	gallons	acre-feet	gpm	cfs
J&M Well No. 1	96,250,400	295	1,100	2.45
J&M Well No. 2	195,030,200	599	1,321	2.94
Total	291,280,600	894	2,421	5.39

Note: The maximum diversion rate was calculated as the sum of the highest observed flows from monthly site visits.

Section 4 **SUMMARY AND RECOMMENDATIONS**

4.1 Summary

Monitoring during 2020 was conducted per the Reporting Plan submitted to IDWR on May 5, 2020. Groundwater water and flow monitoring indicates operation of the Simco Road Wells was in compliance with Water Right Transfer No. 78356 in 2020. A summary of the 2020 monitoring is as follows:

- A maximum drawdown of 149.7-feet, 123.6-feet, and 105.0-feet occurred in Production Wells No. 1 & 2, and the shallow monitoring well, respectively.
- Groundwater levels recovered to within 1.0%, 0.4% and 5.0% of the original static water level for Production Well No. 1 and No. 2, and the shallow monitoring well, respectively.
- A total of 894 acre-feet of groundwater was diverted from the production wells at a maximum recorded rate of 5.39cfs.
- Chickpeas (110-acres) and corn (259-acres) were grown on the 369-acre irrigated area.

4.2 Recommendations

As indicated in the Reporting Plan, the submittal frequency of water level data is to be reevaluated after the first year. The following are recommended changes to the Reporting Plan:

- Submission of groundwater level data to be submitted annually as part of the Annual Report.
- Transducer (groundwater level and barometric pressure) recording at 6-hour intervals.

These recommendations are based on the following observations:

- All three wells recovered to approximately the same static water level measured prior to the irrigation season.
- Operation of the pumps is variable during irrigation season; therefore, the pumping water level is expected to be variable as well. Continuous flow monitoring data is anticipated to be included in the 2021 Annual Report.

Appendix A

Groundwater Monitoring-Reporting Plan

Simco Road Wells

May 5, 2020

Nick Miller, Western Region Manager
Idaho Department of Water Resources
2735 W Airport Way
Boise, Idaho 83705

SUBJECT: GROUNDWATER MONITORING-REPORTING PLAN

Dear Mr. Miller,

On January 21, 2016, Water Right No. 78356 was approved by the Idaho Department of Water Resources (IDWR). The approved transfer included six water rights: 61-12283, 61-12284, 61-12285, 61-12281, 61-12280, and 61-12282. A Condition of Approval of each water right was that “the diversion and use in connection with the water right is subject to a Monitoring-Reporting Plan”. As outlined in the Condition of Approval, the right holder shall provide the IDWR with a plan for monitoring-reporting of aquifer levels, diversion flow rates, and volumes.

It is Mountain Waterworks’ understanding the Shekinah Industries, Inc. (Shekinah) water rights have been further subdivided by the four primary landowners owning approximately 765-acres and designated as the place of use. The table below summarizes the land ownership and associated water right percentage that will ultimately modify water rights currently under the ownership of Shekinah.

Table 1: Shekinah Water Right Ownership

Land Owner	Acres	Water Ownership (%)	Water Vol. (AFA)
Duane & Cheryl Amyx	32.14	3.39	50.0
Paul & Sheila Hudson	100.00	10.56	155.9
J&M Solid Rock, LLC	160.00	16.89	249.3
Shekinah Industries Inc.	481.76	69.16	1020.8
Totals	773.90	100.00	1,476.0

On behalf of J&M Solid Rock, LLC and Shekinah, Mountain Waterworks is proposing the following groundwater monitoring plan associated with the Transfer of Water Right No. 78356.

Background Information

Two new groundwater wells were drilled on land owned by J&M Solid Rock during 2018, 2019 and will be the initial points of diversion under the new water rights. In addition to the production wells, a shallow groundwater monitoring well (MW No.1) was constructed and developed for monitoring of shallow groundwater. The wells are identified as J&M PW No. 1 (D0080123) and J&M PW No. 2 (D0082843) and will be the primary points of diversion to complete the transfer. The water rights in total will divert 1,476 acre-feet annually at a maximum diversion rate of 5,56 cfs. The place of use is identified on a total of 765-acres and will be limited to irrigation of 369-acres within the approved place of use.

Shekinah Groundwater Monitoring-Reporting Plan

Monitoring Well (J&M MW No.1), J&M PW. No.1 (D0080123), J&M PW No. 2 (D0082843)

May 4, 2020

Groundwater Monitoring-Reporting Plan

1. Groundwater Monitoring

- 1.1. Installation of pressure transducers in the pumping wells (J&M PW. No.1 D0080123, J&M PW No. 2 D0082843), with a reading frequency of every six hours for the first year, and re-evaluation thereafter.
- 1.2. Installation of a barometric pressure recorder in the shallow observation well, with a reading frequency of every six hours for the first year, and re-evaluation thereafter.
- 1.3. Quarterly hand measurement of water levels for the first year for production wells and the monitoring well, and re-evaluation of measurement frequency thereafter.
- 1.4. Monitoring at an increased frequency (1-hour) in the pumping well at the end of the irrigation season to facilitate water level recovery analysis.

2. Flow Monitoring

- 2.1. Installation of a flowmeter on the production wells (e.g. magmeter) to record discharge over the first year with re-evaluation thereafter.
- 2.2. The flowmeter should meet IDWR's minimum acceptable standards for measurement and reporting of surface and groundwater diversions;
 - ✓ Minimum manufacturers' design accuracy of +/- 2 percent of reading
 - ✓ Installed accuracy of at least +/- 10 percent of reading
 - ✓ Must read instantaneous flow or be capable of flow rate calculation
 - ✓ Must record total volume
 - ✓ Non-volatile memory (power outage does not zero volume reading)
 - ✓ Sufficient digits to assure "roll-over" to zero does not occur within 2 years
 - ✓ Volume reading cannot be "reset" to zero
 - ✓ Installed to manufacturers' specifications

3. Facility Operation

- 3.1. Initiation of pumping using an uninterrupted, constant withdrawal rate, over 2-day time period, to evaluate the effects of extended pumping.

4. IDWR Reporting

- 4.1. Reporting of water level data on a monthly basis to IDWR for the first year, and re-evaluation of submittal frequency thereafter.
- 4.2. Submission of an annual report to IDWR that would include:
 - ✓ Analysis of water level trends in the production wells, and shallow monitoring well.
 - ✓ Reporting of discharge rates over time and analysis in relation to water level trends.
 - ✓ Reporting of crops grown and acres irrigated during the year.

Pumping Equipment Installation and Sequence of Pumping

Due to timing of how the production wells will be equipped, and how the land will be farmed and irrigated, the operational sequencing for PW No. 1 and PW No. 2 will differ during the spring of 2020. PW No. 2 will be the first on-line and will be utilized to supply two (2) center pivots, irrigating approximately 148 acres. PW No. 1 will be equipped in May 2020 and will supply two (2) center pivots. Both wells together will supply four (4) center pivots and irrigate 369 total acres at a maximum diversion rate of 5.56 cfs.

Please contact me directly with questions or concerns on the proposed Groundwater Monitoring and Reporting Plan. I can be reached directly at 208.850.9978, or tfarrell@mountainwtr.com.

Respectfully submitted,

Mountain Waterworks

Right Acre Limit: 184.0

POU Total Acres: 1459.0

CONDITIONS OF APPROVAL

1. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
2. This right is limited to the irrigation of 184 acres within the place of use described above in a single irrigation season.

Transfer No. 78356

WATER RIGHT NO. 61-7119

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

3. Rights 61-2154, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 5.70 cfs and the irrigation of 433 acres.
4. Rights 61-2154, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 9.06 cfs, a total annual maximum diversion volume of 2632 af at the field headgate, and the irrigation of 658 acres.
5. Rights 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 13.18 cfs, a total annual maximum diversion volume of 3500 af at the field headgate, and the irrigation of 875 acres.
6. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
7. This right is for the use of trust water and is subject to review 5 years after the issuance of this transfer to determine availability of water and to re-evaluate the public interest.
8. Prior to diversion of water under this approval, the right holder shall provide a means of measurement acceptable to the Department from all authorized points of diversion which will allow determination of the total rate of diversion.
9. After specific notification by the Department, the right holder shall record the quantity of water diverted or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.
10. The following rights are diverted through points of diversion described above: 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378.

WATER RIGHT NO. 61-12280**As Modified by Transfer No. 78356**

Transfer No. 78356

WATER RIGHT NO. 61-12280

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

1. The right holder shall accomplish the change authorized by this transfer within five years of the date of this approval.
2. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.
3. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
4. This right does not grant any right-of-way or easement across the land of another.
5. Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code and applicable Well Construction Rules of the Department.
6. Prior to diversion and use of water under this right, the right holder shall install a flow measurement and volume totalizing device of a type approved by the Department on each point of diversion to measure flow and volume of water diverted.
7. The right holder shall install or construct a straight length of conduit or ditch suitable for installation of a device for measuring the entire flow of water being diverted in connection with this right. If the right holder uses conduit, the straight length of conduit shall be at least fifteen times the diameter of the conduit and shall be above ground or otherwise easily accessible.
8. The diversion and use of water described in Transfer 78356 may be subject to additional conditions and limitations agreed to by the protestant and the right holder under a separate agreement to which the Department is not a party. Because the Department is not a party, the Department is not responsible for enforcement of any aspect of the agreement not specifically addressed in other conditions herein. Enforcement of those portions of the agreement not specifically addressed in other conditions shall be the responsibility of the protestant and the water right holder.
9. Diversion and use of water in connection with this right is subject to a Monitoring-Reporting Plan. The right holder shall provide the Department with a plan for monitoring-reporting aquifer levels, diversion flow rates, and volumes. The monitoring-reporting should occur in parallel with land development and production and should include identification of non-production wells and timelines for measuring and reporting. The right holder shall not divert water in connection with this right until the plan is approved by the Department. Failure to comply with the plan once it is accepted shall be cause for the Department to cancel or revoke the right.
10. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 61-12090 in the event of priority administration of water rights with points of diversion within administrative Basin 61.
11. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 63-32499 in the event of priority administration of water rights with points of diversion within administrative Basin 63.

WATER RIGHT NO. 61-12280
As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

12. This right is limited to the irrigation of 78 acres within the authorized place of use in a single irrigation season.
13. Rights 61-12280, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 2.40 cfs and the irrigation of 183 acres.
14. Rights 61-12280, 61-12281, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 3.82 cfs, a total annual maximum diversion volume of 1112 af at the field headgate, and the irrigation of 278 acres.
15. Rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 when combined shall not exceed a total diversion rate of 5.56 cfs, a total annual maximum diversion volume of 1476 af, a total annual maximum consumptive use volume of 1092 af, and the irrigation of 369 acres in a single irrigation season.
16. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the place of use.
17. The following rights are diverted through points of diversion described above: 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285.

CONDITIONS OF APPROVAL

1. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
2. This right is limited to the irrigation of 225 acres within the place of use described above in a single irrigation season.

Transfer No. 78356

WATER RIGHT NO. 61-7005

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

3. Rights 61-2154, 61-7005, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 9.06 cfs, a total annual maximum diversion volume of 2248 af at the field headgate, and the irrigation of 562 acres.
4. Rights 61-2154, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 9.06 cfs, a total annual maximum diversion volume of 2632 af at the field headgate, and the irrigation of 658 acres.
5. Rights 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 13.18 cfs, a total annual maximum diversion volume of 3500 af at the field headgate, and the irrigation of 875 acres.
6. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
7. Prior to diversion of water under this approval, the right holder shall provide a means of measurement acceptable to the Department from all authorized points of diversion which will allow determination of the total rate of diversion.
8. After specific notification by the Department, the right holder shall record the quantity of water diverted or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.
9. The period of use for the irrigation described in this approval may be extended to an ending date of 11/15 provided that beneficial use of the water can be shown and other elements of the right are not exceeded. The use of water after 10/15 is subordinate to all water rights having no subordinated early or late irrigation use and a priority date earlier than 2/27/2003.
10. The following rights are diverted through points of diversion described above: 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378.

Transfer No. 78356

WATER RIGHT NO. 61-12281

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

1. The right holder shall accomplish the change authorized by this transfer within five years of the date of this approval.
2. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.
3. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
4. This right does not grant any right-of-way or easement across the land of another.
5. Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code and applicable Well Construction Rules of the Department.
6. Prior to diversion and use of water under this right, the right holder shall install a flow measurement and volume totalizing device of a type approved by the Department on each point of diversion to measure flow and volume of water diverted.
7. The right holder shall install or construct a straight length of conduit or ditch suitable for installation of a device for measuring the entire flow of water being diverted in connection with this right. If the right holder uses conduit, the straight length of conduit shall be at least fifteen times the diameter of the conduit and shall be above ground or otherwise easily accessible.
8. The diversion and use of water described in Transfer 78356 may be subject to additional conditions and limitations agreed to by the protestant and the right holder under a separate agreement to which the Department is not a party. Because the Department is not a party, the Department is not responsible for enforcement of any aspect of the agreement not specifically addressed in other conditions herein. Enforcement of those portions of the agreement not specifically addressed in other conditions shall be the responsibility of the protestant and the water right holder.
9. Diversion and use of water in connection with this right is subject to a Monitoring-Reporting Plan. The right holder shall provide the Department with a plan for monitoring-reporting aquifer levels, diversion flow rates, and volumes. The monitoring-reporting should occur in parallel with land development and production and should include identification of non-production wells and timelines for measuring and reporting. The right holder shall not divert water in connection with this right until the plan is approved by the Department. Failure to comply with the plan once it is accepted shall be cause for the Department to cancel or revoke the right.
10. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 61-12090 in the event of priority administration of water rights with points of diversion within administrative Basin 61.
11. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 63-32499 in the event of priority administration of water rights with points of diversion within administrative Basin 63.

WATER RIGHT NO. 61-12281

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

12. This right is limited to the irrigation of 95 acres within the authorized place of use in a single irrigation season.
13. Rights 61-12281, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 3.82 cfs, a total annual maximum diversion volume of 948 af at the field headgate, and the irrigation of 237 acres.
14. Rights 61-12280, 61-12281, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 3.82 cfs, a total annual maximum diversion volume of 1112 af at the field headgate, and the irrigation of 278 acres.
15. Rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 when combined shall not exceed a total diversion rate of 5.56 cfs, a total annual maximum diversion volume of 1476 af, a total annual maximum consumptive use volume of 1092 af, and the irrigation of 369 acres in a single irrigation season.
16. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the place of use.
17. The following rights are diverted through points of diversion described above: 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285.

POU Total Acres: 1459.0

CONDITIONS OF APPROVAL

1. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
2. Right 61-10378 is an enlargement of Right 61-2154 pursuant to Section 42-1426, Idaho Code.

Transfer No. 78356

WATER RIGHT NO. 61-10378

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

3. This water right is subordinate to all water rights with a priority date earlier than April 12, 1994, that are not decreed as enlargements pursuant to Section 42-1426, Idaho Code. As between water rights decreed as enlargements pursuant to Section 42-1426, Idaho Code, the earlier priority right is the superior right.
4. This right is for an enlargement of 33 acres within the place of use described above.
5. Rights 61-2154 and 61-10378 when combined shall not exceed a total diversion rate of 3.83 cfs, a total annual maximum diversion volume of 896 af at the field headgate, and the irrigation of 224 acres.
6. Rights 61-2154, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 5.70 cfs and the irrigation of 433 acres.
7. Rights 61-2154, 61-7005, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 9.06 cfs, a total annual maximum diversion volume of 2248 af at the field headgate, and the irrigation of 562 acres.
8. Rights 61-2154, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 9.06 cfs, a total annual maximum diversion volume of 2632 af at the field headgate, and the irrigation of 658 acres.
9. Rights 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 13.18 cfs, a total annual maximum diversion volume of 3500 af at the field headgate, and the irrigation of 875 acres.
10. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
11. Prior to diversion of water under this approval, the right holder shall provide a means of measurement acceptable to the Department from all authorized points of diversion which will allow determination of the total rate of diversion.
12. After specific notification by the Department, the right holder shall record the quantity of water diverted or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.
13. The following rights are diverted through points of diversion described above: 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378.

WATER RIGHT NO. 61-12283**As Modified by Transfer No. 78356**

Transfer No. 78356

WATER RIGHT NO. 61-12283
As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

1. The right holder shall accomplish the change authorized by this transfer within five years of the date of this approval.
2. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.
3. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
4. This right does not grant any right-of-way or easement across the land of another.
5. Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code and applicable Well Construction Rules of the Department.
6. Prior to diversion and use of water under this right, the right holder shall install a flow measurement and volume totalizing device of a type approved by the Department on each point of diversion to measure flow and volume of water diverted.
7. The right holder shall install or construct a straight length of conduit or ditch suitable for installation of a device for measuring the entire flow of water being diverted in connection with this right. If the right holder uses conduit, the straight length of conduit shall be at least fifteen times the diameter of the conduit and shall be above ground or otherwise easily accessible.
8. The diversion and use of water described in Transfer 78356 may be subject to additional conditions and limitations agreed to by the protestant and the right holder under a separate agreement to which the Department is not a party. Because the Department is not a party, the Department is not responsible for enforcement of any aspect of the agreement not specifically addressed in other conditions herein. Enforcement of those portions of the agreement not specifically addressed in other conditions shall be the responsibility of the protestant and the water right holder.
9. Diversion and use of water in connection with this right is subject to a Monitoring-Reporting Plan. The right holder shall provide the Department with a plan for monitoring-reporting aquifer levels, diversion flow rates, and volumes. The monitoring-reporting should occur in parallel with land development and production and should include identification of non-production wells and timelines for measuring and reporting. The right holder shall not divert water in connection with this right until the plan is approved by the Department. Failure to comply with the plan once it is accepted shall be cause for the Department to cancel or revoke the right.
10. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 61-12090 in the event of priority administration of water rights with points of diversion within administrative Basin 61.
11. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 63-32499 in the event of priority administration of water rights with points of diversion within administrative Basin 63.
12. This right is for an enlargement of 14 acres within the place of use described above.

WATER RIGHT NO. 61-12283
As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

13. Right 61-12283 is an enlargement of Right 61-12284 pursuant to Section 42-1426, Idaho Code.
14. This water right is subordinate to all water rights with a priority date earlier than April 12, 1994, that are not decreed as enlargements pursuant to Section 42-1426, Idaho Code. As between water rights decreed as enlargements pursuant to Section 42-1426, Idaho Code, the earlier priority right is the superior right.
15. Rights 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 1.61 cfs, a total annual maximum diversion volume of 380 af at the field headgate, and the irrigation of 95 acres.
16. Rights 61-12280, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 2.40 cfs and the irrigation of 183 acres.
17. Rights 61-12281, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 3.82 cfs, a total annual maximum diversion volume of 948 af at the field headgate, and the irrigation of 237 acres.
18. Rights 61-12280, 61-12281, 61-12282, 61-12283 and 61-12284 when combined shall not exceed a total diversion rate of 3.82 cfs, a total annual maximum diversion volume of 1112 af at the field headgate, and the irrigation of 278 acres.
19. Rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 when combined shall not exceed a total diversion rate of 5.56 cfs, a total annual maximum diversion volume of 1476 af, a total annual maximum consumptive use volume of 1092 af, and the irrigation of 369 acres in a single irrigation season.
20. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the place of use.
21. The following rights are diverted through points of diversion described above: 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285.

CONDITIONS OF APPROVAL

- Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
- This right is limited to the irrigation of 217 acres within the place of use described above in a single irrigation season.

Transfer No. 78356

WATER RIGHT NO. 61-2155

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

3. Rights 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378 when combined shall not exceed a total diversion rate of 13.18 cfs, a total annual maximum diversion volume of 3500 af at the field headgate, and the irrigation of 875 acres.
4. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
5. Prior to diversion of water under this approval, the right holder shall provide a means of measurement acceptable to the Department from all authorized points of diversion which will allow determination of the total rate of diversion.
6. After specific notification by the Department, the right holder shall record the quantity of water diverted or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.
7. The period of use for the irrigation described in this approval may be extended to a beginning date of 3/15 and an ending date of 11/15 provided that beneficial use of the water can be shown and other elements of the right are not exceeded. The use of water before 4/1 and after 10/31 is subordinate to all water rights having no subordinated early or late irrigation use and a priority date earlier than 10/26/2000.
8. The following rights are diverted through points of diversion described above: 61-2154, 61-2155, 61-7005, 61-7119, 61-7396 and 61-10378.

Transfer No. 78356

WATER RIGHT NO. 61-12285
As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

1. The right holder shall accomplish the change authorized by this transfer within five years of the date of this approval.
2. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.
3. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.
4. This right does not grant any right-of-way or easement across the land of another.
5. Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code and applicable Well Construction Rules of the Department.
6. Prior to diversion and use of water under this right, the right holder shall install a flow measurement and volume totalizing device of a type approved by the Department on each point of diversion to measure flow and volume of water diverted.
7. The right holder shall install or construct a straight length of conduit or ditch suitable for installation of a device for measuring the entire flow of water being diverted in connection with this right. If the right holder uses conduit, the straight length of conduit shall be at least fifteen times the diameter of the conduit and shall be above ground or otherwise easily accessible.
8. The diversion and use of water described in Transfer 78356 may be subject to additional conditions and limitations agreed to by the protestant and the right holder under a separate agreement to which the Department is not a party. Because the Department is not a party, the Department is not responsible for enforcement of any aspect of the agreement not specifically addressed in other conditions herein. Enforcement of those portions of the agreement not specifically addressed in other conditions shall be the responsibility of the protestant and the water right holder.
9. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the place of use.
10. Diversion and use of water in connection with this right is subject to a Monitoring-Reporting Plan. The right holder shall provide the Department with a plan for monitoring-reporting aquifer levels, diversion flow rates, and volumes. The monitoring-reporting should occur in parallel with land development and production and should include identification of non-production wells and timelines for measuring and reporting. The right holder shall not divert water in connection with this right until the plan is approved by the Department. Failure to comply with the plan once it is accepted shall be cause for the Department to cancel or revoke the right.
11. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 61-12090 in the event of priority administration of water rights with points of diversion within administrative Basin 61.

WATER RIGHT NO. 61-12285

As Modified by Transfer No. 78356

CONDITIONS OF APPROVAL

12. Water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 shall be subordinated to 63-32499 in the event of priority administration of water rights with points of diversion within administrative Basin 63.
13. This right is limited to the irrigation of 91 acres within the authorized place of use in a single irrigation season.
14. Rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285 when combined shall not exceed a total diversion rate of 5.56 cfs, a total annual maximum diversion volume of 1476 af, a total annual maximum consumptive use volume of 1092 af, and the irrigation of 369 acres in a single irrigation season.
15. The following rights are diverted through points of diversion described above: 61-12280, 61-12281, 61-12282, 61-12283, 61-12284 and 61-12285.

Transfer Approval Notice

Dear Water Right Holder <and other Interested Persons>:

The Department of Water Resources has issued the enclosed approved Transfer of Water Right(s). Please be sure to thoroughly review the conditions of approval and remarks listed on the approval document.

The Transfer of Water Right(s) is a PRELIMINARY ORDER issued by the Department pursuant to section 67-5243, Idaho Code. It can and will become a final order without further action by the Department unless the APPLICANT petitions for reconsideration or files an exception and/or brief within fourteen (14) days of the service date as described in the enclosed information sheet.

ANY PERSON aggrieved by any decision, determination, order or action of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Department and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

If the transfer approval includes a condition requiring measuring and recording devices, such devices shall comply with specifications established by the Department. Detailed specifications are available on the Department's home page on the Internet, or you can request a copy by contacting any office of the Department. Please be sure to thoroughly review the specifications to avoid unnecessary costs for reinstallation or modification due to non-conforming or improperly installed devices.

Please note that water right owners are required to report any change of water right ownership and/or mailing address to the Department within 120 days of the change. Failure to report these changes could result in a \$100 late filing fee. Contact any office of the Department or visit the Department's homepage on the Internet to obtain the proper forms and instructions.

If you have any questions, please contact me at (208)334-2190.

Sincerely,

 Rachel Neely for:

Nick Miller
Western Regional Manager

EXPLANATORY INFORMATION TO ACCOMPANY A PRELIMINARY ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 730.02)

The accompanying order or approved document is a "Preliminary Order" issued by the department pursuant to section 67-5243, Idaho Code. **It can and will become a final order without further action of the Department of Water Resources ("department") unless a party petitions for reconsideration, files an exception and brief, or requests a hearing as further described below:**

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a preliminary order with the department within fourteen (14) days of the service date of this order. **Note: the petition must be received by the department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See Section 67-5243(3) Idaho Code.

EXCEPTIONS AND BRIEFS

Within fourteen (14) days after: (a) the service date of a preliminary order, (b) the service date of a denial of a petition for reconsideration from this preliminary order, or (c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration from this preliminary order, any party may in writing support or take exceptions to any part of a preliminary order and may file briefs in support of the party's position on any issue in the proceeding with the Director. Otherwise, this preliminary order will become a final order of the agency.

REQUEST FOR HEARING

Unless a right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Director and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

ORAL ARGUMENT

If the Director grants a petition to review the preliminary order, the Director shall allow all parties an opportunity to file briefs in support of or taking exceptions to the preliminary order and may schedule oral argument in the matter before issuing a final order. If oral arguments are to be heard, the Director will within a reasonable time period notify each party of the place, date and hour for the argument of the case. Unless the Director orders otherwise, all oral arguments will be heard in Boise, Idaho.

CERTIFICATE OF SERVICE

All exceptions, briefs, requests for oral argument and any other matters filed with the Director in connection with the preliminary order shall be served on all other parties to the proceedings in accordance with IDAPA Rules 37.01.01302 and 37.01.01303 (Rules of Procedure 302 and 303).

FINAL ORDER

The Director will issue a final order within fifty-six (56) days of receipt of the written briefs, oral argument or response to briefs, whichever is later, unless waived by the parties or for good cause shown. The Director may remand the matter for further evidentiary hearings if further factual development of the record is necessary before issuing a final order. The department will serve a copy of the final order on all parties of record.

Section 67-5246(5), Idaho Code, provides as follows:

Unless a different date is stated in a final order, the order is effective fourteen (14) days after its service date if a party has not filed a petition for reconsideration. If a party has filed a petition for reconsideration with the agency head, the final order becomes effective when:

- (a) The petition for reconsideration is disposed of; or
- (b) The petition is deemed denied because the agency head did not dispose of the petition within twenty-one (21) days.

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, if this preliminary order becomes final, any party aggrieved by the final order or orders previously issued in this case may appeal the final order and all previously issued orders in this case to district court by filing a petition in the district court of the county in which:

- i. A hearing was held,
- ii. The final agency action was taken,
- iii. The party seeking review of the order resides, or
- iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of this preliminary order becoming final. See section 67-5273, Idaho Code. The filing of an appeal to district court does not itself stay the effectiveness or enforcement of the order under appeal.

Appendix C

Plan of Operation

Simco Road Wells

SIMCO ROAD GROUNDWATER MONITORING PLAN OF OPERATION

Job No. 999.217

Water Right No. 78356

Monitoring Well (J&M MW No. 1), J&M PW. No. 1 (D0080123), J&M PW No. 2 (D0082843)

BACKGROUND INFORMATION

Water right No. 78356 was approved by the Idaho Department of Water Resources (IDWR) on January 21, 2016. The approved transfer included six water rights 61-12280, 61-12281, 61-12282, 61-12283, 61-12284, and 61-12285. Two new groundwater wells and a monitoring well were drilled on land owned by J&M Solid Rock during 2018 and 2019. These two wells are the initial points of diversion under the new water rights. The wells are identified as J&M PW No. 1 (D0080123), J&M PW No. 2 (D0082843), and J&M MW No. 1. The water rights allow for diversion of up to 1,476 acre-feet annually at a maximum diversion rate of 5.560 cfs. The water will be used for irrigation of 369-acres within the approved place of use.

A Condition of Approval for the water right transfer was that “the diversion and use in connection with the water right is subject to a Monitoring-Reporting Plan.” As part of compliance with the water right, this document summarizes the monitoring requirements and procedures for the Simco Road Wells.

MONITORING REQUIREMENTS

The final design and set up of each well is shown for reference on the drawing titled, “Simco Rd., Idaho, Well Construction” located in Appendix A. It is important that the monitoring equipment be installed per this drawing so that monitoring data is accurate and consistent.

Groundwater

The following summarizes groundwater monitoring requirements with the focus of recording groundwater level in each well over time. All three wells are monitored.

1. MW No. 1

1.1. Two pressure transducers are installed; one barometric (atmospheric pressure) installed at 50-feet below ground level and one Levelogger (water level) installed at 500-feet below ground level.

1.2. Transducer readings occur:

1.2.1. once every six (6) hours for the first year with potential for re-evaluation thereafter.

1.2.2. once per hour at end of irrigation season to facilitate water level recovery analysis.

1.3. Hand measurement of water level occurs, at a minimum, once quarterly for the first year with potential for re-evaluation thereafter. However, hand measurement of water level shall be taken and recorded during each monthly site visit to download data.

2. *PW No. 1*

2.1. One pressure transducer, Levellogger (water level), is installed at 500-feet below ground level.

2.2. Transducer readings occur:

2.2.1. once every six (6) hours for the first year with potential for re-evaluation thereafter.

2.2.2. once per hour at end of irrigation season to facilitate water level recovery analysis.

2.3. Hand measurement of water level occurs, at a minimum, once quarterly for the first year with potential for re-evaluation thereafter. However, hand measurement of water level shall be taken and recorded during each monthly site visit to download data.

3. *PW No. 2*

3.1. One pressure transducer, Levellogger (water level), is installed at 460-feet below ground level.

3.2. Transducer readings occur

3.2.1. once every six (6) hours for the first year with potential for re-evaluation thereafter.

3.2.2. once per hour at end of irrigation season to facilitate water level recovery analysis.

3.3. Hand measurement of water level occurs, at a minimum, once quarterly for the first year with potential for re-evaluation thereafter. However, hand measurement of water level shall be taken and recorded during each monthly site visit to download data.

Flow Monitoring

3.4. PW No. 1 and PW No. 2

3.4.1. Instantaneous and totalizing flow of each well via separate flow meters installed as part of the discharge piping of each well.

IDWR Reporting

3.5. Report water level data monthly to IDWR for the first year, re-evaluation thereafter.

3.6. Submission of an annual report to IDWR that includes:

- Analysis of water level trends in J&M PW No. 1, J&M PW No. 2, and J&M MW No. 1.

- Discharge rates over time with analysis in relation to water level trends.
- Crops grown and acres irrigated during the year.

PROCEDURE

Equipment

Monitoring activities require the following equipment:

- (1) Water level sounder
- (1) Laptop Computer with Levellogger 4.4.0 and Logger 5 software installed
- (1) Barologger Optical Reader
- (1) Keller America Transducer Reader Cable
- (1) Hammer
- (2) Crescent Wrenches

Data Collection

J&M PW No. 1 and J&M PW No. 2

Data collected at well sites 1 and 2 includes:

- Flow (gpm)
- Totalized flow (gallons)
- Pump operating power (Hz)
- Water level
 - o Hand measured
 - o Transducer Data

Collection shall occur following these steps:

1. Record time of data collection.
2. Read flow (gallons per minute, gpm) and total volume (gallons) from the flow meter located in the above-ground pump discharge piping.
3. Read pump operating flow (gpm) and speed (Hz) from pump's variable frequency drive (VFD) LCD screen.
4. Use the wrench to temporarily remove the plug on the pump header labeled "TRANSDUCER". Retrieve the transducers located in well. Refer to section "Logger 5 Software" to download data from transducer to computer. Once data is downloaded, ensure transducer is still active and set to continue recording.

5. Lower water level sounder into sounding tube at a controlled rate. Continue to lower sounder until the sounder “beeps” and shows a read light on the spool. Begin to raise the sounder at a significantly slower rate until the “beep” and red light stop. Read the water level at the point the red light and sound do not indicate water.
6. Repeat Step 5 to confirm results. Once the water level is confirmed, record the time and the water level for the respective well.
7. Remove the sounder from the transducer tube.
8. After removing the sounder from the sounding tube, slowly lower the transducer back into the sounding tube and replace caps on the transducer tube.

Notes

1: If when lowering transducers back into sounding tubes they are stopped prematurely of their final depth, pour water down sounding tube to help the transducers pass the oil in the tube.

2: Upon collection of transducer data,

1. *upload the raw data to: C:\MWW\Dropbox (Mountain Waterworks)\Projects\A to D Projects\Amyx_217\IDWR\RAW_Data_DONOTMODIFY*
2. *update the Compiled Groundwater Monitoring Spreadsheet located at: C:\MWW\Dropbox (Mountain Waterworks)\Projects\A to D Projects\Amyx_217\IDWR*

J&M MW No. 1

The monitoring well does not produce water and does not have a pump installed within it. Data collected at the Monitoring Well includes:

- Water level
 - o Hand measured
 - o Transducer Data
- Barometric (atmospheric) pressure (transducer

Collection shall occur following these steps:

1. Remove steel cap using hammer.
2. Retrieve transducers from well housing and transfer data to computer according to section “Levellogger 4.4.0 Software.”
3. Follow the same protocol listed in steps 5 and 6 from “Data Collection Wells 1 and 2” section above to find the water level using the sounder.
4. Return sounders to well housing and replace steel cap.

Notes

1: Upon collection of transducer data,

1. *upload the raw data to: C:\MWW\Dropbox (Mountain Waterworks)\Projects\A to D Projects\Amyx_217\IDWR\RAW_Data_DONOTMODIFY*
2. *update the Compiled Groundwater Monitoring Spreadsheet located at: C:\MWW\Dropbox (Mountain Waterworks)\Projects\A to D Projects\Amyx_217\IDWR*

Logger 5 Software

The “Logger 5” software is necessary to retrieve data from the transducers in each of the wells. It can be downloaded at the following link: <http://www.kelleramerica.com/manuals-and-software/software/InstallerLogger5.zip>. It should be installed on the computer that is brought to the site.

Levellogger 4.4.0 Software

The “Levellogger 4.4.0” software is necessary to retrieve data from the transducers in each of the wells it can be downloaded at the following link: <https://www.solinst.com/downloads/>. It should be installed on the computer that is brought to the site.

Simco Road Wells

AUTONOMOUS DATA COLLECTOR

DATA LOGGING AT FAVORABLE PRICE - Ø 18 MM

The DCX-18 ECO is an autonomous, rechargeable battery powered instrument. It features a stainless steel 18 mm in diameter housing designed to record pressure (water depth) and temperature over long periods at a very economical price. Its small size, rechargeable battery, fully welded housing and the relative sensor option are just a few of the many advantages provided by the DCX-18 ECO.

The electronics employ the latest microprocessor technology which give high accuracy and resolution for the pressure and temperature signals. The measured values are mathematically compensated for all linearity and temperature errors of the pressure sensor.

The use of a non-volatile memory for data storage ensures high data security.

DCX-18 ECO

The sensor, electronics and the rechargeable battery are housed in a fully welded stainless steel tube for submersible deployment. For data read-out, the DCX-18 ECO must be recovered from the measurement point. The end cap, sealed by two O-Rings, must then be removed to access the serial interface.

The DCX-18 ECO works with an absolute pressure sensor. In shallow water depths where the influence of barometric pressure changes should be considered, it is recommended that a second data logger (Baro) is placed at the surface, to record the barometric pressure. The PC then calculates the differential pressure resp. the water depth by subtracting the two measured values.

DCX-18 ECO with cable (DCX-18 ECO SG or DCX-18 ECO VG)

An optional cable is available for the DCX-18 ECO, enabling data retrieval or configuration and charging the battery without removing the data logger. For relative measuring devices, the cable incorporates a capillary tube which enables venting the relative sensor.

Rechargeable Battery:

The DCX-18 ECO is charged over the USB connection with the K-114M converter connected to PC. For fast charging, connect the power supply unit or the car charging adapter to the converter. The charge status is displayed in the logger software.

DCX- 18 ECO

Accuracy ****	typ. 0,1 %FS	Probe Weight	O-Ring: Viton®
Comp. Temperature Range	-10...40 °C	Options	Protective Cap: Delrin®
Error Band ** (-10...40 °C)	max. 0,2 %FS		≈ 150 g (without cable)
Resolution	max. 0,0025 %FS		Other material: e.g. Hastelloy or Titanium

* external influences could reduce battery capacity ** Accuracy + Temperature Error *** The rechargeable battery should preferably be charged without an extension cable. It is possible to use an extension cable of up to 10 m in length for fast charging, or a cable of up to 30 m for normal charging. **** Includes Linearity + Repeatability + Hysteresis

LOGGER 5

The Logger 5 software makes it possible to configure and read autonomous KELLER data loggers. This software assists users during measurements in the field, with processing the data and also with forwarding it to partners or end customers.

Measurement data can be displayed in graphic form, exported, compensated for air pressure or converted into different units. The online function displays the current device values.

The software is included in the scope of delivery for the interface converter cables, or it can be downloaded free of charge at www.keller-druck.com.

- Supports Windows operating systems

Overview of functions: Logger 5

- Pressure and temperature channels, selectable
- Adjustable measurement interval (1s...99 days)
- Averaging with selectable number of measurements
- Recording modes:
 - continuous interval measurement
 - event-controlled recording:
 - recording starts when value is exceeded
 - recording starts when value is undercut
 - recording starts when value changes
 - combination of continuous and event-controlled recording is possible
- Adjustment of pressure zero point
- Start measurements immediately or at a set time
- Data storage: linear or ring-type memory
- Battery status display
- Online display of measuring channels
- Management of notifications and images for stations

Processing and forwarding measurement data

- Graphic display of measurement data
- Simple export of measurement data and graphics (supports Microsoft Office and these file formats: CSV-1, CSV-2, XML, Hydras, TNO, Wiski, BNA)
- Generation of measurement reports
- Station information stored in SQ Lite database

Appendix E

Water Level Meter (Sounder) Data Sheet

Simco Road Wells

Levellogger® 5

Model 3001

The Levellogger 5 records highly accurate groundwater and surface water level and temperature measurements. It combines a pressure sensor, temperature detector, 10-year lithium battery, and datalogger, sealed within a 22 mm x 160 mm (7/8" x 6.3") stainless steel housing with a corrosion-resistant coating baked-on using polymerization technology.

The Levellogger 5 measures absolute pressure using a Hastelloy® pressure sensor, offering high resolution and an accuracy of 0.05% FS. Readings are stable in extreme pressure and temperature conditions. The Hastelloy sensor can withstand 2 times over-pressure without permanent damage. Combined with the durable coating inside and out, the Levellogger 5 has high corrosion and abrasion resistance in harsh environments.

The Levellogger 5 uses a Faraday cage design, which protects against power surges or electrical spikes caused by lightning. Its durable maintenance-free design, high accuracy and stability, make the Levellogger 5 the most reliable instrument for long-term, continuous water level recording.

Applications

- Aquifer characterization: pumping tests, slug tests, etc.
- Watershed, drainage basin and recharge monitoring
- Stream gauging, lake and reservoir management
- Harbour and tidal fluctuation measurement
- Wetlands and stormwater run-off monitoring
- Water supply and tank level measurement
- Mine water and landfill leachate management
- Long-term water level monitoring in wells, surface water bodies and seawater environments

Fast communication and downloading speeds with a high speed Field Reader 5

Upgraded Features

- Increased stability for communication: single-eye optical interface—easier to clean, more scratch resistant
- Increased memory: 150,000 sets of data
- Stronger, more robust design: double o-ring seals for increased leakage protection
- Better thermistor sensitivity: upgraded platinum RTD
- Superior protection in harsh environments: corrosion and abrasion resistant coating—inside and out
- Enhanced Levellogger Software: improved Diagnostic Utility for more proactive user “self-tests”

Single-eye optical interface

The Levellogger 5 features a smooth, single-eye optical interface, which allows for easy cleaning and more reliable, faster communication. Using a Solinst USB device, including the new Field Reader 5, and Levellogger PC Software, programming and data downloading speeds are 57,600 bps.

Flexible Communication

Levellogger Software is streamlined, making it easy to program dataloggers, and view and compensate data in the office or the field. Data compensation is made simple; multiple data files can be barometrically compensated at once.

The Levellogger 5 App Interface on your in-field Levelloggers creates a Bluetooth® connection between your dataloggers and the Solinst Levellogger App on your smart device. Also an option, the DataGrabber 5 is a field-ready USB data transfer unit.

Remote monitoring options include the LevelSender 5, a simple and compact device that fits right in a 2" well, STS 5 Telemetry Systems, and the RRL 5 Remote Radio Link. In addition, Levellogger 5 Series dataloggers are SDI-12 compatible.

Levellogger Setup

Programming Levelloggers is extremely intuitive. Simply connect to a PC using an Optical Reader (Desktop Reader 5 or Field Reader 5) or PC Interface Cable. Use a single screen to fill in your project information and sampling regime. Templates of settings can be saved for easy re-use.

The Levellogger time may be synchronized to the computer clock. There are options for immediate start or future start and stop times. The percentage battery life remaining and the amount of free memory are indicated on the settings screen.

Levelloggers can also be programmed with a sampling regime and start/stop times using the Solinst Levellogger App on your smart device.

Convenient Sampling Options

Levelloggers can be programmed with linear, event-based, or a user-selectable sampling schedule. Linear sampling can be set from 1/8 second to 99 hours.

Event-based sampling can be set to record when the level changes by a selected threshold. Readings are checked at the selected time interval, but only recorded in memory if the condition has been met. A default reading is taken every 24 hours if no “event” occurs.

The Schedule option allows up to 30 schedule items, each with its own sampling rate and duration. For convenience, there is an option to automatically repeat the schedule.

Data Download, Viewing and Export

Data is downloaded to a PC with the click of a screen icon. There are multiple options for downloading data, including ‘Append Data’ and ‘All Data’. The software also allows immediate viewing of the data in graph or table format using ‘Real Time View’.

Level data is automatically compensated for temperature; the temperature data is also downloaded. Barometric compensation of Levellogger data is performed using the Data Wizard, which can also be used to input manual data adjustments, elevation, offsets, density, and adjust for Barometric efficiency. The Levellogger Software allows easy export of the data into a spreadsheet or database for further processing.

The Solinst Levellogger App also allows you to view and save real-time or logged data right on your smart device.

Helpful Utilities

The Diagnostic Utility can be used in case of an unexpected problem. It checks the functioning of the program, calibration, backup and logging memories, the pressure transducer, temperature sensor and battery voltage, as well as enabling a complete Memory Dump, if required. A firmware upgrade will be available from time to time, to allow upgrading of the Levellogger 5, as new features are added.

Levellogger 5 App Interface

The Levellogger 5 App Interface uses Bluetooth® technology to connect your Levellogger to your smart device. With the Solinst Levellogger App, you can download data, view real-time data, and program your Levelloggers. Data can be e-mailed from your smart device directly to your office (see Model 3001 Levellogger 5 App Interface data sheets).

*The Apple logo is a trademark of Apple Inc., registered in the U.S. and other countries. App Store is a service mark of Apple Inc. Google Play is a trademark of Google Inc. The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Solinst Canada Ltd. is under license.

Standard Cable Deployment

Levelloggers may be suspended on a stainless steel wireline or Kevlar® cord. This is a very inexpensive method of deployment, and if in a well, allows the Levellogger to be easily locked out of sight and inaccessible. Solinst offers wireline and cord assemblies in a variety of lengths.

Solinst 3001 Well Cap Assembly

The 2" Locking Well Caps are designed for both standard and Direct Read Cable deployment options.

The well cap has a convenient eyelet for suspending Levelloggers using wireline or Kevlar cord. The Well Cap insert has two openings to accommodate direct read cables for both a Levellogger and Barologger. Adaptors are available to fit 4" wells.

The cap is vented to equalize atmospheric pressure in the well. It slips over the casing, and can be secured using a lock with a 9.5 mm (3/8") shackle diameter.

*Levellogger 2" Locking Well Cap Installations
(see Well Caps data sheet for more details)*

L5 Direct Read Cables

When it is desired to get real-time data and communicate with Levelloggers without removal from the water, they can be deployed using L5 Direct Read Cables. This allows viewing of the data, downloading and/or programming in the field using a portable PC, DataGrabber 5, or the Solinst Levellogger 5 App Interface.

Levelloggers can be connected to an SDI-12 datalogger using the Solinst SDI-12 Interface Cable attached to a L5 Direct Read Cable.

Cable Specifications

L5 Direct Read Cables are available for attachment to any Levellogger in lengths up to 1500 ft. The 3.175 mm dia. (1/8") coaxial cable has an outer polyurethane jacket for strength and durability. The stranded stainless steel conductor gives non-stretch accuracy.

*Barologger 5 and Levellogger 5
installed in Well Using
L5 Direct Read Cables*

Accurate Barometric Compensation

Levelloggers measure absolute pressure (water pressure + atmospheric pressure) expressed in feet, meters, centimeters, psi, kPa, or bar.

The most accurate method of obtaining changes in water level is to compensate for atmospheric pressure fluctuations using a Barologger 5, avoiding time lag in the compensation.

The Barologger 5 is set above high water level in one location on site. One Barologger can be used to compensate all Levelloggers in a 30 km (20 mile) radius and/or with every 300 m (1000 ft.) change in elevation.

The Levellogger Software Data Compensation Wizard automatically produces compensated data files using the synchronized data files from the Barologger and Levelloggers on site.

The Barologger 5 uses pressure algorithms based on air rather than water pressure, giving superior accuracy.

The recorded barometric information can also be very useful to help determine barometric lag and/or barometric efficiency of the monitored aquifer.

The Barologger 5 records atmospheric pressure in psi, kPa, or mbar. When compensating submerged Levellogger 5, Edge, Gold or Junior data, Levellogger Software can recognize the type of Levellogger and compensate using the same units found in the submerged data file (e.g. feet or meters). This makes the Barologger 5 backwards compatible.

*Synchronize and Simplify
Barometric Compensation
Across Entire Site*

Levellogger 5 Specifications

Level Sensor:	Piezoresistive Silicon with Hastelloy Sensor
Accuracy:	± 0.05% FS (Barologger 5: ± 0.05 kPa)
Stability of Readings:	Superior, low noise
Resolution:	0.002% FS to 0.0006% FS
Units of Measure:	m, cm, ft., psi, kPa, bar, °C, °F (Barologger 5: psi, kPa, mbar, °C, °F)
Normalization:	Automatic Temperature Compensation
Temp. Comp. Range:	0° to 50°C (Barologger 5: -10 to +50°C)
Temperature Sensor:	Platinum Resistance Temperature Detector (RTD)
Temp. Sensor Accuracy:	± 0.05°C
Temp. Sensor Resolution:	0.003°C
Battery Life:	10 Years – based on 1 reading/minute
Clock Accuracy (typical):	± 1 minute/year (-20°C to 80°C)
Operating Temperature:	-20°C to 80°C
Maximum # Readings:	150,000 sets of readings
Memory Mode:	Slate and Continuous
Communication:	Optical high-speed: USB, SDI-12 57,600 bps with USB
Size:	22 mm x 160 mm (7/8" x 6.3")
Weight:	166 grams (5.9 oz)
Corrosion Resistance:	Baked-on coating using polymerization technology (inside and out)
Other Wetted Materials:	Delrin®, Viton®, 316L stainless steel, Hastelloy, PFAS-free PTFE coating
Sampling Modes:	Linear, Event & User-Selectable with Repeat Mode, Future Start, Future Stop, Real-Time View
Measurement Rates:	1/8 sec to 99 hrs
Barometric Compensation:	Software Wizard and one Barologger 5 in local area (approx. 30 km/20 miles radius)

Models	Full Scale (FS)	Accuracy	Resolution
Barologger	Air only	± 0.05 kPa	0.002% FS
M5	5 m (16.4 ft.)	± 0.3 cm (0.010 ft.)	0.001% FS
M10	10 m (32.8 ft.)	± 0.5 cm (0.016 ft.)	0.0006% FS
M20	20 m (65.6 ft.)	± 1 cm (0.032 ft.)	0.0006% FS
M30	30 m (98.4 ft.)	± 1.5 cm (0.064 ft.)	0.0006% FS
M100	100 m (328.1 ft.)	± 5 cm (0.164 ft.)	0.0006% FS
M200	200 m (656.2 ft.)	± 10 cm (0.328 ft.)	0.0006% FS

Low Cost Datalogging: See Levellogger 5 Junior data sheet.
Vented Dataloggers: See LevelVent 5 & AquaVent 5 data sheets.
Conductivity Datalogging: See Levellogger 5 LTC data sheet.

DataGrabber 5

The DataGrabber 5 is a field-ready data transfer device that allows you to copy data from a Levellogger onto a USB flash key (Dual USB & USB-C key provided).

The DataGrabber 5 is compact and very easy to transport. It connects to the top end of a Levellogger's Direct Read Cable, or Slip Fit and Threaded Adaptors are available to allow direct connection to a Levellogger.

One push-button is used to download all of the data in a Levellogger's memory to a USB device. A convenient LED light indicates the operation of the DataGrabber 5. The data in the Levellogger memory is not erased, and logging is not interrupted if the Levellogger is still running. The DataGrabber 5 uses its own replaceable 9V battery.

LevelSender 5 Telemetry

The LevelSender 5 is a simple, low cost telemetry system designed to send data from Levelloggers in the field, to your smart device and PC database via cellular communication.

Initial set up is done through a user-friendly software wizard at the Home Station. There is two-way communication between the LevelSender 5 and Home Station, allowing remote updates.

Each LevelSender 5 device has a single port to connect one Levellogger with an optional splitter that allows the connection of two. A built-in barometer allows barometric compensation of water level data.

LevelSender 5 stations are compact in design, which allows them to be discreetly installed inside a 2" (50 mm) well (see Model 9500 data sheet).

STS 5 Telemetry

STS 5 Telemetry provides an efficient method to send Levellogger data from the field to your desktop. Cellular communication options give the flexibility to suit any project. STS Systems are designed to save costs by enabling the self-management of data. Alarm notification, remote firmware upgrades and diagnostic reporting make system maintenance simple (see Model 9100 data sheet).

RRL 5 Remote Radio Link

The RRL 5 Remote Radio Link is ideal for closed-loop, short range applications up to 30 km (20 miles). The RRL 5 can be linked to an STS 5 telemetry station to change from a closed-loop telemetry system to one which can be accessed from anywhere through internet connectivity. (see Model 9200 data sheet).

Appendix F

Barometric Pressure Transducer Data Sheet

Simco Road Wells

Laser Marked Water Level Meter

Model 102

The Solinst Model 102 Water Level Meter is designed to measure groundwater levels, especially in small diameter tubes and piezometers, or where a flexible assembly is needed to get past down hole instrumentation.

Also available from Solinst, are the Model 101 and 101B Water Level Meters, which feature easy-to-read, easily repaired flat tape. (See Model 101 Water Level Meter Data Sheets).

Operating Principles

The Model 102 Water Level Meter uses a choice of two small diameter probe designs, attached to a narrow coaxial cable, fitted on a sturdy ergonomically designed reel. A standard 9 volt battery, housed in an easy-access battery drawer, powers the Water Level Meter.

When the probe enters water the electrical circuit is completed, sending a signal back to the reel where a light and clearly audible buzzer are activated. The water level is then determined by taking a reading directly from the cable at the top of the well casing or borehole.

A sensitivity control allows the buzzer to be scaled back or turned off while in cascading water, and ensures a clear signal in both high and low conductivity conditions.

Narrow Diameter Probes

Model 102 Probes are designed for flexibility. The probe tips use a recessed design to minimize false signals in cascading water.

P10: 10 mm dia. x 70 mm long (3/8" x 2.75") stainless steel with 10 stainless steel weights, weighing 174 g (6.14 oz). This probe is ideal for the majority of water level measurement applications. The flexible weight assembly allows easy well access and keeps the cable hanging straight in monitoring wells.

P4: 4 mm dia. x 38 mm long (0.157" x 1.5") stainless steel weighing 10 g (0.35 oz), with no weights. It is ideal for shallow applications and for accessing very narrow diameters, especially the channels of the Solinst CMT System, Drive-Point Piezometers or narrow open tubes.

[Get Quote](#) | [More Info](#)

Laser Marked Cable

The coaxial cable has a durable polyurethane jacket with permanent markings precisely laser etched on the cable every millimeter or every 1/100 ft.

The cable reels smoothly, remains flexible, and comes in lengths from 30 m – 300 m (100 ft – 1000 ft).

A braided copper outer conductor gives flexibility and a stranded stainless steel central conductor gives strength. It is easy to repair and splice.

Laser Markings Each Millimeter or Each 1/100 ft

Water Level Meter Features

- Low Cost** • Solinst quality at a low price
- Narrow** • 4 mm (0.157") diameter probe
- Long Life** • Rugged, corrosion resistant components
• Strong, flexible cable is easily spliced
• Replacement probes, cables and parts
- Accurate** • Precise markings every mm or 1/100 ft
• Traceable to national standards

Water Level Meter Reels

The standard reel has an easy access battery drawer, a well designed brake assembly, and convenient carrying handle. It has been ergonomically designed to be comfortable in use and stable when placed on the ground. It has an on/off sensitivity switch, light, buzzer, battery test button, and comes with a tape guide.

The mini reel is sturdy, yet very compact and easy to carry. It also has an on/off sensitivity switch, light, buzzer, and battery test button.

102 Water Level Meter Specifications

Operating temperature of reel:	-20°C to +50°C
Operating temperature of cable/probe:	-20°C to +80°C
Wetted materials (cable/probe):	Polyurethane, stainless steel, Delrin®, Viton®, Polyolefin (P10 only)
Reel IP rating:	IP64 (dust and splash proof)
Conductivity detection threshold:	P10: 40 µS/cm P4: 100 µS/cm

Cable Length Options

Solinst Model 102 Water Level Meters are available on reels in the following standard lengths:

Mini Reel	* 25 m	* 80 ft
Small Reel	* 30 m	* 100 ft
	* 60 m	* 200 ft
	* 100 m	* 300 ft
	150 m	500 ft
	250 m	750 ft
	300 m	1000 ft

* Cables with P4 Probes are only available in these lengths

Other Options

Carrying Bag: Small and mini padded nylon carrying bags are available, as optional extras. The bag design has a convenient shoulder strap, zippered front pocket, zippered top, and a grommet in the base to prevent moisture build-up. A mini bag has no pocket.

Replacement Parts: Replacement cables with probes, weights, and other spare parts are available.

102M Mini Laser Marked Water Level Meter

The laser marked coaxial cable is mounted on a convenient small reel that is light-weight and fits easily into a mini carrying case or backpack. The accurate cable is marked each millimeter or every 1/100 ft.

The 102M Mini Water Level Meter is available in 25 m and 80 ft lengths. There is the choice of the P4 or P10 Probe.

Measure water levels within the narrow channels of a Solinst CMT® System.

Tape Guide/Datum

The tape guide can be used to protect the cable from damage on rough edges, help the probe hang straight in the well, and ensures consistent measurements. It can also provide reel support on the casing. A tape guide is provided with each standard reel.

®Delrin and Viton are registered trademarks of DuPont Corp.
