D. FLOW MEASUREMENTS

Measurements were taken from the approved flowmeters for each well.

Measurements:

Well	Flow Rate
1003145	9.85
1003149	11
1003148	6.28
1002985	7.21
1002987	8.14
Total	42.48

The total diversion rate for the water rights and permits from the five wells is 40.53 cfs. The wells can divert all of the water rights from the well at the same time. No combined diversion rate limit is needed.

F. VOLUME CALCULATIONS

1. Volume Calculations for irrigation:

$$V_{IR} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) = 528 \text{ acres} \times 3.5 \text{ acre feet/acre} = 1848 \text{ AF}$$

$$V_{DR} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation season}) \times 1.9835 = 7.11 \times 215 \times 1.9835 = 3032.1 \text{ AF}$$

$$V = \text{Smaller of } V_{IR} \text{ and } V_{DR} = \mathbf{1848 \text{ AF}}$$

G. NARRATIVE/REMARKS/COMMENTS

In the early 1990s, IDWR issued three water right permits to several members of the Schwendiman family. The numbers of the three original permits were 22-7703, 22-7704, and 22-7728. The permits authorize the diversion of groundwater to irrigate land in Madison and Fremont counties near Newdale, ID. The applicant submitted proof of beneficial use for the permits in the 1990s. The permits were amended and split over time, and the Department conducted multiple field examinations for these permits over the years. For various reasons, the Department was delayed in issuing licenses for the beneficial use developed under these permits. It was determined that the beneficial use developed under the Schwendiman permits occurs through two interconnected irrigation systems. The Department issued licensing amendments so that the water right licenses reflect the diversion and use of water under the permits as occurs through these two irrigation systems. Parent permit 22-7728 was split into permits 22-13293 (this permit) and 22-13292 in 2004.

Have conditions of permit approval been met? X Yes No
