Michael,

I caught up to the City and got answers for your questions.

No other acreage is being irrigated besides the park you described.

The City indicated that 30 trucks were filled with a capacity of 4,000 gallons each.

Let me know if you need anything else.

Matthew,

I am in the process of getting this one wrapped up. I need a little more information on water use from the church well. It looks like there's a city park located just west of the well. About 3.5 acres are being watered there. Is there any other acreage being watered from the well? You also mentioned water trucks. What's the capacity of the water trucks and the estimated number of fills per year? Thanks for your help.

Michael

Michael,

I checked in with the City and they don't have a flow meter on the Church Well. It is used to irrigate the City Park and a few water trucks.

Matthew,

Thanks for the data you provided for two of the three existing wells. Can you tell me how the City arrived at 35 gpm for well #1 and 75 gpm for well #2? Could you also provide us with data for the "church well"? Thanks.

Michael

Michael,

Here is what the City has for records. They note when the turn the well on and when the turn it off. The two wells are relatively small and don't have any telemetry controls so they are turned on manually at the beginning of summer and turned off manually once demand drops in the fall.

Let me know if you need anything else.

Matthew,

It looks like the City's transfer application made it through the advertising period without protest. We still need the daily diversion records for the City's three existing wells for Summer 2025. Have you been able to gather those records yet? Thanks for any update you might have.

Michael

You bet. I want to keep this moving as quickly as possible so we can get underway.

Thanks for the prompt review as well.

Matthew,

That looks good. I will switch those 2 pages out. Thanks for the quick turnaround.

Michael,

Please see the attached revisions to the application as discussed below. Let me know if those seem to be what you were looking for.

Thanks,

Subject: RE: Lava Water Right Transfer

Matthew,

While looking over this application in preparation for advertising, I discovered that the place of use for rights 29-8056 and 29-13297 is currently not described as a municipal "service area," which is the current standard for describing places of use for municipal purposes. In fact, right 29-13297 is currently limited to just one government lot. Therefore, the place of use of these two rights needs to be changed to a service area.

The easiest way to bring these rights up to current standards is to amend page 3 (Part 3.A and 3.B) and page 5 (Part 3.C.4) of the transfer application. You don't need to list all the legal descriptions on Part 3.C.4. You can just write "the service area of the City of Lava Hot Springs" in the proposed place of use section. We will automatically generate the land list using the POU shape file you provided. There will be no additional fees for this amendment.

Please feel free to call if you have any questions or want to discuss.

Thanks,
Michael

Michael,

Thanks for the call. Here is the application materials with the applicant name updated and all of the figures in color. I will get with the City on gathering the daily diversion records for their three existing wells.

I also attached the shapefile associated with Attachment 3C showing the City's updated impact area.
