1. Other water rights with the same place of use: Overlap ? X Yes No

Water Right No.	Source	Purpose of Use	Basis
95-4404	Coeur d'Alene Lake	Domestic	Decree

Comments: Water Right (WR) 95-4404 overlaps the permitted place of use (POU) and authorizes the same beneficial use. The WR is owned by the permit holder according to Department Records. According to the application for permit this permit was intended to share the same diversions system as 95-4404. However, there is no reason to limit use when combined.

E. FLOW CALCULATIONS

☐ Additional Computation Sheets AttachedMeasured Method: According to Administrative Application Processing Memo #22 the standard diversion rate for a single domestic use is 0.04 cfs. I am recommending a 0.04 cfs diversion rate.

D.R.V = Smaller of V_{I.R.} and V_{D.R.} = N/A2. Volume Calculations for Other Uses: 2025 NAIP Aerial Imagery confirmed the development of internal and external domestic use. According to Administrative Application Processing Memo #22 the standard diversion volume for a single domestic use is 0.6 af for internal and 0.6 af for external domestic use or 1.2 af. I am recommending a 1.2 af diversion volume.Comments: N/A

Administrative Application Processing Memo #22 Standard = 1.2 af

H. NARRATIVE/REMARKS/COMMENTS

This permit qualifies for an in-office licensing examination. The permit authorizes internal and external domestic use for one home diverting from Coeur d'Alene Lake. 2025 ESRI Aerial Imagery confirmed the development of internal and external domestic use within the development period. The permitted POU included the SESE of Section 26 Township 50N and Range 04W. However, 2025 ESRI Aerial Imagery indicated the developed POU was not located within that legal description. A condition on the permit requires the permit holder to install a fish screen meeting the fish screening a passage requirements of the Idaho Department of Fish and Game. The permit holder did not indicate a fish screen was installed on the diversion intake. After a phone conversation with the permit holder on June 15th, 2026, they confirmed a screening device was installed on the diversion intake. All conditions of permit approval have been met, and development of beneficial use was confirmed within authorization on the permit. Therefore, I am recommending a 0.04 cfs diversion rate and 1.2 af diversion volume.

Conditions X01, 187, and 004 should remain on the license. Condition 029 should be removed because the permit holder confirmed they installed a screening device on the diversion intake meeting the fish screening and passage requirements of the Idaho Department of Fish and Game.

Have conditions of permit approval been met? ☒ Yes ☐ No
