

MEMORANDUM

DATE: July 13, 2026
FROM: Jose Pacheco, Senior Water Resource Agent
TO: File
RE: Recommendation for 11-7909, 11-7911, 11-7912, 11-7916, 11-8468, 11-8469

Recommending 21 acres of the 36.6 acres claimed. The water right was for 29 acres and aerial imagery indicated that of those 29 acres only 21 are being irrigated today.

Historic Irrigation Evaluation

The section on the northeast corner of the claimed POU.

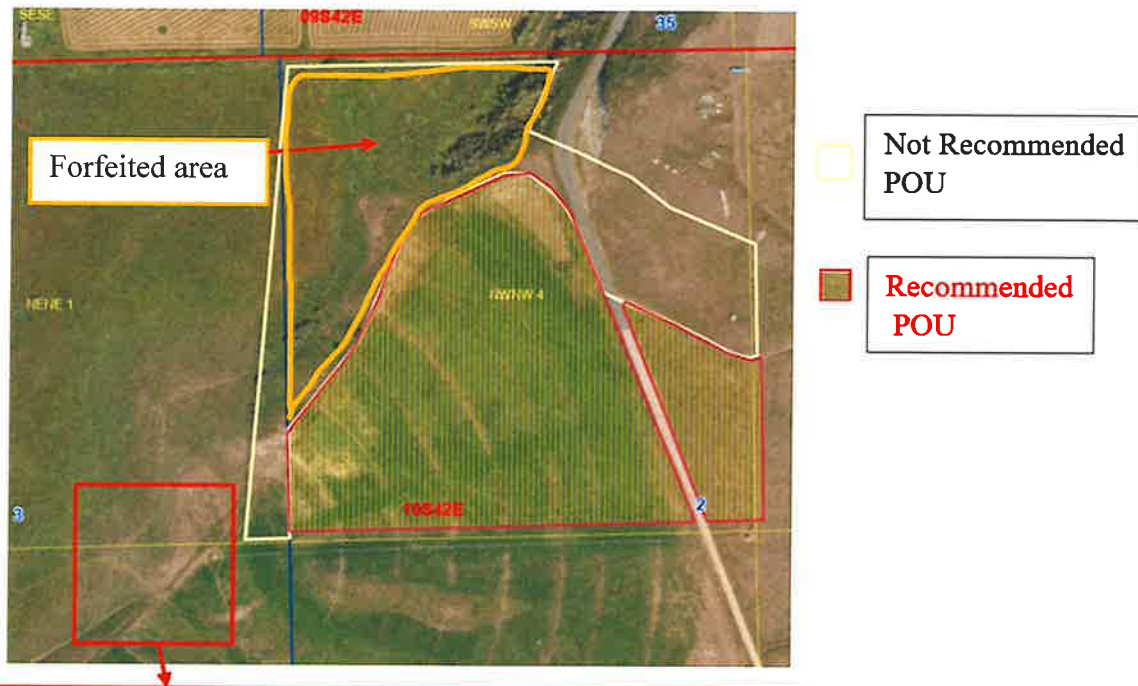

- This section (4.1 acres) is not recommended because aerial imagery suggests that it has never been irrigated.

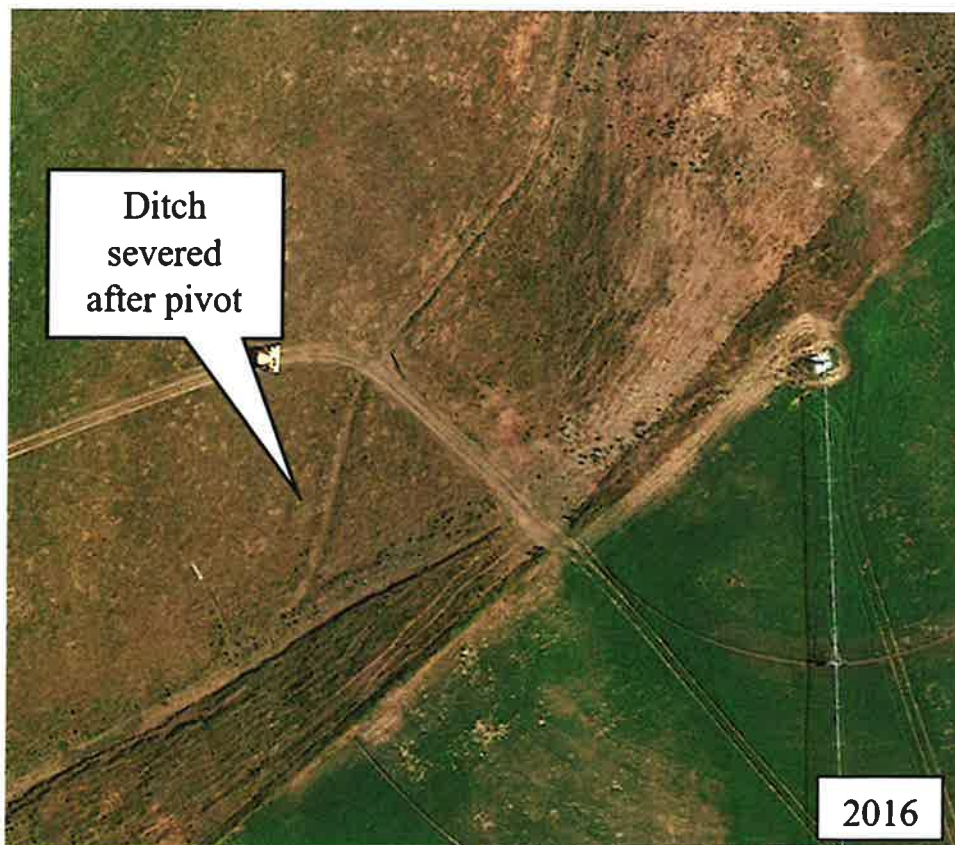

Partial Forfeiture Evaluation

The section on the northwest corner of the claimed POU.

- This section (9 acres) is not recommended because aerial imagery shows that the Baird-Munro Ditch, which historically flood-irrigated this area, was severed in 2014 when the pivot was installed.

-
