D. FLOW MEASUREMENTS

1. Measurement Equipment	Type	Make	Model No.	Serial No.	Size	Calib. Date
N/A						

2. Measurement Comments: No measurement is required for an in-office examination per IDAPA 37.03.02.035.01

E. FLOW CALCULATIONS

☐ Additional Computation Sheets Attached

As per IDWR Administrative Memorandum No. 22, the standard diversion rate for 1 home is 0.04 cfs. I am recommending 0.04 cfs be applied to the license.

$$Q = (Hp)(8.8)(\text{efficiency})/(\text{lift in ft}) + (2.31) * (\text{pressure psi}) + (\text{friction}) = \text{cfs}$$

Measurement = 0.04 cfs

Permit allowed = 0.04 cfs

Recommendation = 0.04 cfs

Comments: No calculations required for domestic use.

F. VOLUME CALCULATIONS

2. Volume Calculation: According to Administrative Application Processing Memo #22 the standard diversion volume for indoor and outdoor domestic use is 1.2 ac-ft/yr. I am recommending this amount be applied to the license.

H. NARRATIVE/REMARKS/COMMENTS

This permit qualifies for an in-office exam. Examination was conducted by Max Wolf on July 24, 2026. Ownership of the permit is in the name of Carl J Anna. This is confirmed by 2025 Canyon County NAIP imagery, current Idaho taxlot, and GIS data. The POU and POD associated with the permit is currently owned by the permit holder and overlaps with no other water user's POD or POU. This was confirmed through the satellite imagery and Idaho Taxlot data from the development period. Statement of completion was received on July 8, 2026. No ownership change is required.

Available satellite imagery from the development period shows the development of one house and several small outbuildings, with minimal outdoor irrigation. The applicants require no easement or access to the property of another for access to the POD or POU. Diversion system is described as a pump from the well to a pressure tank which supplies the house and household irrigation. I am recommending a diversion rate of 0.04 cfs and a total volume of 1.2 ac-ft/yr for this license.

Condition 046 should be removed from the license, all well construction has taken place prior to beneficial use. Conditions X01 should remain authorizing water for domestic use for one home only. Condition 121 should be replaced with condition 103, allowing the director to require the right holder to provide purchased or leased natural flow or stored water to offset depletion of Lower Snake River flows if needed for salmon migration purposes. All conditions for approval have been met.

Have conditions of permit approval been met? ☒ X Yes ☐ No**I. RECOMMENDATIONS**
