

MEMORANDUM

March 25, 2026

Water Right: 95-9427

Author: william.cresse

Subject: License Recommendations

Reference memo to file. Memo details diversion rate (1.48 cfs) and volume limitation (403 AF) recommendations for license based on Remington production data (pumping data).

Per Beneficial Use Field Report, per Remington production data, largest flow measurement recorded was 1.48 cfs¹ during the development period.

Per IDAPA 37 – Department of Water Resources – Water Allocation Bureau – 37.03.02 – Beneficial Use Examination Rules – Section 035, page 7 (35.01.n), the amount of water will be limited by the smaller of the permitted amount (5.9 cfs), the amount upon which the license examination fee is paid (2.36 cfs, \$150), the capacity of the diversion works (4.43 cfs, theoretical pump equations) or the amount beneficially used prior to submitting proof of beneficial use (1.48 cfs).

For 95-9427, Remington pumped a maximum of 1.48 cfs to meet customer demand within their service area.

IDWR recommends a rate of 1.48 cfs for the license.

IDWR proposed water right condition of approval: X35: Rights 95-9427, 95-9457 and 95-9458 when combined shall not exceed a total diversion rate of 2.25 cfs.

Per Licensing Memo No. 1, “When licensing a permit for municipal use for a municipal provider that does not serve an incorporated city, the extent of beneficial use established under a non-RAFN permit should be described with both a rate of flow and a volume limitation.” The maximum volume during the development period was 403.2 AF.

IDWR recommends a volume of 403 AF for the license.

¹ Permit Proof Due Date: 6/1/2023. Permit Proof Made Date: 5/31/2023. Remington production data January 2014 through December 2024.

Tammy,

We manage many water systems.

Can you reply back with which system you are referring to?

Hi Bob,

I am working on the Beneficial Use Field Report and I need flow information for the development period. This would be 2019 to 2023. I don't have to have the actual reports. A simple outline of the flow rates during this time period will be sufficient. I will use the one that gives the higher rates of flow to get as much diversion rate and volume for your water right. If you have any questions, just let me know.

Thank you,
