Water Year 2005 Report

The water year started out to look as though we were going to have a normal water year. However in late January and February we saw much below average snow pack this had us concerned whether the reservoir would fill prior to the start of irrigation deliveries.

This turned around however big time in the end of April and the first part of May with well above near record precipitation for April and May. This resulted in a above normal water year supply.

The irrigation deliveries started in early June and continued though the summer. The rest of the summer continued to be somewhat warmer and the runoff was near normal with deliveries well into late fall.

The total runoff for the Little Wood River Basin was 114,000 acre feet with 35,600 acre feet delivered to the farms and town lots. This is about 106% of the normal runoff (108,000 AF) and slightly below average water use because no water was delivered in May.

In 2005 we saw more ground converted to sprinkler irrigation again and the crop rotation was near normal. The district is now near 95% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.

With the funding that was received in 2002 & 2004 the District and NRCS completed an environmental impact study and the 99% final design of a total enclosed pressurized system. Now the Irrigation District is actively trying to obtain funding to construct this system.
