Water Year 2009 Report

The water year started out to look as though we were going to have a normal to below normal water year with 90 % snow pack. Then in late May we saw the above normal precipitation for the rest of the spring ending up with a near normal water year. This resulted with a 78% of the normal stream flow for the season. This resulted in a 30% carry over in the reseviior for the next season.

The total runoff for the Little Wood River Basin was 79,000 acre feet with 36,000 acre feet delivered to the farms and town lots. This is about 73% of the normal runoff (108.000 AF) and slightly below average water use.

Station LWOI - Little Wood River above High Five Creek, ID
Parameter QD - Discharge, Mean Daily - cfs
