Water Year 2006 Report

The water year started out to look as though we were going to have a well above normal water year. This contended all the way through the winter and spring thus giving us a well above normal stream flow through the summer.

The irrigation deliveries started in mid May and continued though the summer. The rest of the summer continued to be somewhat warmer and the runoff was well above normal leaving a 30 percent carryover in the reservoir at the end of the water year.

The total runoff for the Little Wood River Basin was 173,000 acre feet with 37,500 acre feet delivered to the farms and town lots. This is about 160% of the normal runoff (108.000 AF) and near average water use.

In 2006 we saw more ground converted to sprinkler irrigation again and the crop rotation was near normal. The district in now over 95% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.

With the funding that was received in 2002 & 2004 the District and NRCS the district has completed the environmental impact statement and the 99% design for the proposed pipeline to replace most of the existing canals. The district at this time is in the process of finding funding to complete the project if at all possible.
