Water Year 2007 Report

The water year started out to look as though we were going to have a normal or above water year. However by January we saw much of the snow pack disappearing ending up at 65% snow pack at the first of April. This resulted with a 25% of the normal stream flow for the season. During the spring runoff much of the needed water went into the ground rather than running off. This condition continued throughout the spring and summer.

This year we were just barley able to fill the reservoir prior to the irrigation season. As a result we are seeing below average levels in the ground water in the valley.

The irrigation deliveries started in mid April and continued though the summer. This has been the second driest water year since I took over the watermaster position in 1995. The rest of the summer continued to be extremely dry and the runoff was well below normal all of the storage water had been delivered by the end of August.

The total runoff for the Little Wood River Basin was 61,000 acre feet with 35,000 acre feet delivered to the farms and town lots. This is about 56% of the normal runoff (108.000 AF) and much below average water use.

In 2006 & 2007 we saw almost of out district converted to sprinkler irrigation and the crop rotation adjusted for the dry conditions of the year. The district in now well over 95% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.

The irrigation district is proceeding with the pipeline project with the EIS and 95% design of the system completed. They are now in the process of securing the new easements that will be required to install the system.
