Date

Pursuant to Section 42-606 Idaho Code, this Watermaster's Annual Report shall be filed prior to the end of the watermaster's appointment for the current year, and kept in the office of the Idaho Department of Water Resources (IDWR). The Watermaster's Daily Diversion Records should be attached to this report if those records are not submitted electronically to IDWR.

Water District 130 Diversion Report for 2021

Compiled by: Nathan Erickson, Watermaster

Pursuant to Idaho Code 42-606, all Watermasters shall file an annual report to the Idaho Department of Water Resources, which includes the amount of water delivered by the Watermaster in the prior water year(s). The report of diversions is then used to determine annual assessment amounts to each water user.

Up to five years' diversion records may be averaged for each water user, and the average annual diversion used for assessment purposes. The following report averages diversion data for years 2016 through 2020. Data for 2021 are not included in this report, but will be included in the 2022 report.

The attached workbook is organized into reporting units and also includes non-reporting (small user) water users. Non-reporting water users are assessed a nominal administrative fee by Water District 130 but are not required to measure and report annual diversions at this time. Nonconsumptive water users are required to measure and report in Water District 130, and are assessed pursuant to Idaho Code 42-605A and the Water District 130 Adopted Resolutions.

Each worksheet contains specific diversion identification information (WMIS number, Metal Tag Number, Diversion Name, Measurement Option(OP)), owner information and annual use data in acre-feet. All data are averaged over the period 2016 to 2020. Data qualifiers (DQ) have been attached to some data. The Measurement Option and Data Qualifier keys appear below.

All data appearing within this report are proprietary and may be updated by Water District 130. Water District 130 and subdistricts conduct ongoing measurement of diversions and measuring device certifications. Calibration factors for flow meters and coefficients for power consumption estimates are recomputed every three years. As these numbers are updated, prior years' data may be adjusted.

Measurement Option key (OP)

- 1 - Totalizing flow meter on irrigation diversion
- 2 - Power Consumption Coefficient (PCC)
- 3 - Alternate method
- 4 - non use of well due to CRP
- 6 - non use of well, other reasons
- 7 - Time clock or Hour meter
- 8 - Totalizing flow meter on non-irrigation diversion
- 9 - Open channel or non-totalizing device

Data Qualifier key (DQ)

Flow meter or timeclock qualifiers-

est - diversion volume estimated or water right volume used

NEW - new diversion, has not yet reported

NM - no reported data, diversions are occurring and may be estimated

ND - no measuring device installed, diversions are occurring and may be estimated

OW - data reported combined with another diversion

EM - reported data are erroneous, and could be higher or lower than actual diversions

Z - no diversions as confirmed by user, hydrographer or watermaster

PCC qualifiers

- 1 Simple systems, one operating condition
- 2 Systems with multiple operating conditions and PCC for measured conditions varies by 10% or less
- 3 Systems with multiple operating conditions and PCC for measured conditions varies more than 10%.
- 4 Systems with multiple operating conditions, using low PCC (high flow) condition to estimate volume
- 5 Systems with multiple operating conditions, not all conditions known or measured
- 6 Known problem with reported kwh data
- 7 Measured PCC during flowmeter check
- 8 Complex system where flow meters or time clocks should be used
- 9 PCC not measured but may have been estimated
- N PCC not measured
- Z no power consumption as confirmed by user, hydrographer or watermaster
