

WD 11-1

The 2001 irrigation season was one of the very driest on record. Very low snow pack caused most of the streams to start off very low. Thomas Fork was low at the start of the irrigation season.

Thomas Fork dried up in spots by the end of July. There was not enough water to accommodate much irrigation.

The total of all diversions for the season as determined from attached diversion summary list was 604.5 24-hr second feet diverted
