Subject: Payette River Storage Accounting

Dear Mr. Hill:

The Payette River water use accounting is maintained by the Water District 65 Watermaster. In 1993 the Idaho Department of Water Resources developed and operated the accounting model on behalf of the Watermaster since the new accounting model was in the developmental stage.

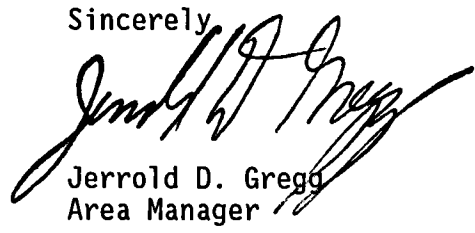

It is our understanding that the storage values shown on Table 5 of that accounting is the final carryover storage as of October 31, 1993.

At the present time the Payette basin reservoirs are still filling and the total volume of stored water available for your company for 1994 will not be known until the reservoir system reaches maximum fill for the season.

You should contact the Water District 65 Watermaster to determine the status of your storage accounts during the 1994 season.

The amount of water that the Bureau of Reclamation will release from its uncontracted space for salmon flow augmentation is unknown at this time. The quantity will depend upon the supply available to Reclamation which will not be known until the reservoirs reach maximum fill.

Sincerely

Handwritten signature of Jerrold D. Gregg in cursive script.
