Boise, ID 83720-9000

Dear Bob:

In reviewing the records of the discharges from CSCI and DED, I find that the discharge was increased on July 6, 1994, even though my order was decreased. I attribute this to the fish augmentation.

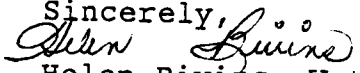

The flows at Letha gauge were also increased.

It is my understanding that any flow passing the Letha bridge above 135 cfs will be attributed to the fish augmentation and therefore charged to that account.

Please confirm, in writing that irrigators will not bear the charges for water passing Letha Bridge during the fish augmentation flows.

Thank you.

Sincerely,

Helen Bivins, Watermaster  
Water District # 65
