

GSB Field Check

6/24/02

JL

with Sue B. IDWR
Hank B. Watermaster

turned pld # 1, 2, 4, 6/7

flowmeter e #1

Davel's pln e home

old subd. pln

found

① #1 pld ok, weir submerged so not functional but ok with flowmeter in pipeline e Trubess Cr. Slight leak in pipe uphill from Tr. Cr. needs attention. Wm will talk to owner. Water in use

② #2 pld ok, weir ok. Water in use.

Slight flow passes #2 for use by #5 (no change e #5 pld so still ok).

③ #4 pld looks ok, flowmeter is on S. side of road across from field pump. Wm will check to be sure meter ok (problems last year). Water not being diverted.

④ #6/7 (sitters) pld ... Separated from common box, flowmeter near pld but no lockable/controllable div. works. Just added length of pipe to directly place in creek just upstream from existing div. dam.

following needed →

Wm will check meter to be sure ok. water in use
but only minor amount.

I will contact Hoffman/Novel & unacceptable
look of controls & this plan.

Novel's plan & home -

S. of creek ... some marginal area
N. " " ... minor price on plot by creek ...
dirt w/ few sprinklers remaining, rest is steep
hillside betw creek & road. Hillside recently
worked over so bare soil. Couple sprinklers
in use on hillside. Is this b.c. & land
needed as plan?

S.B. will pursue
in RESOLVING
objectives

#4 - 6/7 pld site:
