SUBJECT

Tamarack Mill ("EVERGREEN") Compliance Check

6/21/01 site visit with Wardenmaster confirmed that mill is not in compliance w/ GS's 6/18/01 letter. But mill is working on it and might be in compliance soon. Wm will keep checking @ this. Wait for subsequent Wm visit before follow up?

Tamarack Mill (Evergreen) visit w/ Watermaster

-R 6/21/07

visited site per GS's 6/18/07 letter &
meas. devices for river/well agreement from
last year.

Visual return flow (to river) site ... no
meas. devices found.
did not go to river pump site

Met w/ mill rep (Gary?) who had talked w/
GS last year.

Mills info:

Agri Line built a weir & should install in a
week.

What's a meas. bypass flow & bubble? I
suggested ditch that & install another weir ... mill
wants to do that.

What's a measure pump flow from river?
Required or not?

mill has pump curve ... max = 800 gpm ...
maybe ok go w/ that in lieu of flowmeter ...
might need more mitigation flow (800 gpm) this way
vs. actual meas. of pump flow.

Will clarity of GS & lot will know

Looks ok now ... when will check soon &
weir(s) & will go from there.
