Memo; Roger

In the annual report of the water master it was noted that the well known as the Everitt Smith well operated by Jorgensen farms was to be rendered unusable when the water right was moved to the east side of the valley. The finding of the water master indicated that the well could be put into operation by simply turning on the power. The water district feels that this is a violation of the agreement entered into with the Department. We are seeking clarification, and the water master and the district needs to be advised as to what is to be happening in this situation.

Your prompt attention to this matter will be much appreciated, if any further information is needed feel free to contact the water master Craig Shuler at 208-547-3047. or Dale Wistisen at 208-390-4955.

Dale Wistisen
District Sec/Treas.
