

7/13/00

Dear Jim,

I received calls from both Keith & Warren & I (yesterday 7/12/00) that their well pressures had dropped & they were sucking air. I measured the Holsten well & found the level is now 73.82'. That's almost 2 feet lower than this time last year.

I inspected both Keith's & Warren's well & found Warren's at 50 lbs, should be 70 lbs, & it wouldn't even "pressure up his system". Keith was also running at 50 lbs & had cut his shut off valve to about 4/5 of full. Just wanted to let you know. I'll keep monitoring the situation.

Sincerely,

Gray Shuler
