

## CONVERSATION MEMORANDUM

DATE 5/6/94 4:30 pmFILE 57-DNAME OF PARTY Craig BakerEMPLOYEE Cindy HodgesRE: Montini deliveries

Netleton is taking water to Murphy Flat (by Paul's admission) but Nahas still receiving only ~3.2 cfs even after Netleton made flow adjustments. I said I would place a call to Mary B. & check w/ him Monday.

4:35 Mary has advised Paul already to adjust his flows and thought he had made some modifications. Inflow is 7.0 cfs and is split more or less equally between canal & creek. She has not measured bench field. Next trip is scheduled Mon or Tues (5/9 or 10).

I suggested that Mary call Paul and advise him that if, at the next visit, flows were travelling past the bench field (per Mary's measurement) and if Nahas was not receiving 3.6 cfs per Montini agreement that all of Netleton flows would be turned back to creek channel.

Will do follow-up check by telephone on Monday.  
- Has Dave sent Mary the information packet?

## CONVERSATION MEMORANDUM

DATE 5/25/94FILE 51DNAME OF PARTY Mary BlackstockEMPLOYEE Cindy HodgesRE: Montini & General deliveries, letter from Jim Kiser

On 5/24 : Total infow = 6.3 cfs

Netleton in canal = 3.0 to bench field only

In Creek = 3.3 cfs.

Netleton Creek diversions = 18.9 + 3 = 21.9 total

Nahas receiving 2.4 cfs.

Montini agreement not in effect, however, Netleton is exceeding his first priority rights by 3.27 cfs (21.9 - 18.63 1<sup>st</sup> priority) so this must be turned down the creek until Nahas is receiving 2.63, ~~his~~ the next ranked deliverable right. At that time, if Nahas deliveries may be brought up to 3.6 and held, Netleton diversion to canal may increase.

Previously, Netleton was pumping groundwater to lowlands and turning Sinker water to MMC. This provided return flows of about 3.2 cfs at Nahas, but did not satisfy the agreement so Sinker water is back in Creek and groundwater is being pumped up to MMC.
