Cindy;

This morning I asked the Water Master for a report on the water in the reservoir, and she told me that was not among her responsibilities.

As I've said before there is discrimination in the handling of water on Sinker Creek, and this is just another item in that respect. Water Resource takes away my right of control of the dam, and the water master says its not her responsibility to keep me informed as to status of the water when she makes an inspection trip or water delivery change.

Please send me a detailed report on the filling of Nahas Lake for the Season of 1995. I will answer your March 8th letter after I have an opportunity to study the report.

Sincerely,

Jay Hulet

Spoke w/ Mary - she told Jay
only that she watches the
reservoir to make sure there
are no unexpected changes
(rising or falling) - and that was
the only report she could give
him.
