Jim..

Please plan to go along with Cindy so that you will be familiar with any follow-up necessary.
Thanks

Allen

Tim, I was referring to letters and device orders which resulted from the field investigation, as well as on-going questions. I had planned on organizing the field data including my recommendations before turning it over to Allen. Should Jim come along too?

This sounds reasonable although I'm concerned and/or not certain what is meant by the "resulting paperwork". Perhaps this means organizing the GPS files, field notes and photos etc? I think it is good to have Cindy do this (I think I suggested it) but it may help to have another water management staff member go along in case there are on-going questions with this district or from the watermaster. Cindy may not have time to deal with on-going questions through the season.

I talked to both Jenny Mulberry and Chuck Helman (423-5066) today. Apparently they have finally hired a watermaster for Rock Creek. Her name is Cindy Blakely (326-4421). Chuck is presently working with her to show her the ropes.

As was discussed in the WD meeting IDWR has indicated we would again inspect the diversions to see if the method of measurement and control on each diversion is adequate. If inadequate IDWR will send out an order. I talked with Cindy Yenter this morning requesting her help to do the field review since she conducted the last one. She agreed to be involved with the field review but not with the paperwork that may result. She will coordinate with Chuck to set the date early next week.

The field review should include digital pictures, gps location, and notes on adequacy for each diversion.
