RECEIVED
APR 27 2005
Department of Water Resources
Eastern Region

To Whom It May Concern:

According to resources, the South Fork of Antelope Creek has been running for 4 weeks and has still not reach Highway 93.

In past years, it has only taken two weeks, tops, for the South Fork of Antelope to reach Highway 93.

Please check in to this matter ASAP and I will be contacting you regarding your find no later than May 4th, 2005.

Thank you for your investigation into this matter.

Sincerely,

Sandra Wills

a.k.a. a concerned citizen

P.S. If it happens that your research is conducted after the start of irrigation season and the flow of the South Fork is decreased, isn't there a way to ascertain past water usage by satellite imaging?
