Water Year Water Report

The water year started to look as though we were going to have a below average water year with the snow pack staying in the 80-90 percent of the 30 year average. This condition continued throughout the spring and summer.

In March we started to draft water out of the reservoir to prepare for spring runoff. But with the low soil moisture going into the winter and below normal snowpack this was short lived. The first of April we began storing water to have a full reservoir by the start of the irrigation season.

The irrigation deliveries started the end of April and continued though the summer. This has been the driest water year since I took over the watermaster position in 1995. The rest of the summer continued to be extremely dry and the runoff was well below normal with the reservoir level at 10% by the end of September. In early October we saw well above normal rainfall and water use dropped to near nothing for the rest of the season and we began to refill the reservoir for next year.

The total runoff for the basin was 76,500 acre feet with 41,000 acre feet delivered to the farms and town lots. This is about 68% of the normal runoff (113,100 AF) and slightly below average water use.

2000 saw more ground converted to sprinkler irrigation again and the crop rotation remains about the same through out the district. The district in now well over 80% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.
